

Firmware Update Procedure via USB Flash Drive

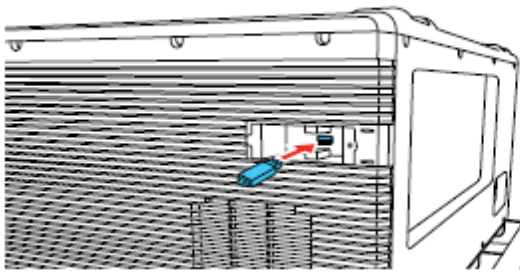

On Pro L25000 Series

Copy the BIN firmware file to the root of the USB Flash drive. Make sure there are no other files on the Flash drive.

Installing the USB Flash Drive

1. Turn off the projector and unplug the power cord.

Insert the flash drive into the wireless LAN module port.

After inserting the Flash drive, press and hold the projectors Power button for 5 seconds while connecting the power cable to the projector.

Four of the projector LED indicators will light up together. The projector fans will accelerate and the LED indicators will start to blink after 1 minute. The process takes about 3 minutes.

When the process is finished, the projector will automatically shut down to Standby mode.
