<b>Subject:</b>	EPSON Scan TWAIN version 1.25A for OS 10.2.X		

---

## **Reason:**

The purpose of this bulletin is to announce the newly released Epson Scan TWAIN driver and Epson Scan Utility version 1.25A for Macintosh OS 10.2.X.

## **Driver Notes:**

1. This driver does not support color restoration and dust removal. **Note:** The Epson Scan Twain driver Help file includes information on these two features but they are not supported on these scanners.
2. The driver does not support a SCSI connection.
3. If you have a Perfection 1670, 3170 or 3200 scanner already installed on your computer, and you then install Epson Scan Twain driver 1.25A, the Epson Scan driver for these 3 models will encounter two issues: (a) Epson Scan utility will not launch and (b) the Start button no longer functions. To fix these two issues you will need to install a patch. Please see bulletin PSB.2003.10.001 for more information about this patch.

## **To Install Epson Scan 1.25A:**

1. Launch the EPSON Scan Installer and follow the on-screen instructions. **Note:** The installer will remove the previous version (1.0) of Epson Scan during the installation.
2. Connect the scanner to the computer using a USB or Firewire cable (an Epson Firewire I/F board is required).

## **To Uninstall Epson Scan 1.25A:**

1. Disconnect the USB or Firewire cable from the scanner.
2. Launch the EPSON Scan Installer.
3. In the drop down menu box where you see "Easy Install" select "Uninstall".
4. Click the Uninstall button.

<b>Subject:</b>	Epson TWAIN v. 5.75A for Apple Macintosh OS X 10.2 and Image Capture		

---

This bulletin was created to inform you of an issue that can occur when using the Epson TWAIN driver (v. 5.75A) in Apple's Image Capture utility on a Macintosh computer running OS X v.10.2 to v.10.2.4.

## **Reason:**

After completing a scan with the Epson TWAIN driver, Image Capture may suddenly crash. The problem appears to be isolated to Image Capture and does NOT occur in Adobe Photoshop 7, Photoshop Elements 2.0 or other TWAIN-compliant applications.

**Note:** "Image Capture" and "Preview" are stand-alone application utilities built into OS X.

## **Steps to Reproduce:**

1. Launch Image Capture. Open Preferences, Under "Scanner Preferences" check the box for "Use TWAIN software whenever possible".
2. Quit Image Capture to save the setting.
3. Re-launch Image Capture.
4. Click Scan.
5. Click Cancel in the Epson TWAIN Full-Auto mode window.
6. Click "Manual Mode" to change to the Epson TWAIN Manual mode user interface window.
7. Without making a selection in the preview window, click the "Scan" button in the TWAIN window, and wait for the scan to complete.

**Note:** After acquiring an image, Image Capture automatically opens the "Preview" application to view the image.

8. Notice that Image Capture crashes after sending the resulting scanned image to the "Preview" application.

## **Solution and Workarounds:**

Choose from any of the solutions listed below.

1. In the Preferences settings for Image Capture, do NOT check the box for "Use TWAIN software whenever possible".
2. If using the Epson TWAIN in Manual mode, drag a selection box around the area you want to scan in the preview window before scanning.
3. Use Adobe Photoshop 7, Photoshop Elements 2.0 or other TWAIN-compliant applications instead of Image Capture.
4. Upgrade your MAC OS X to 10.2.5 or higher.

<b>Subject:</b>	Windows™ and Macintosh® Operating System requirements for USB 1.1/2.0 and IEEE-1394/FireWire® Interface connectivity		

---

This bulletin was created to inform customers of EPSON America's support policy regarding Windows™ and Macintosh® operating system requirements for USB 1.1/2.0 and IEEE-1394/FireWire® interface connectivity.

## **Reason:**

Currently, there are many add-in USB 2.0 and IEEE-1394 connection host adapter products on the market that include drivers for Windows and Macintosh OS that did not originally support specific interfaces. Epson has released several scanner products with built-in USB 2.0 and/or IEEE-1394 (FireWire) ports. This document provides a guideline on EPSON America's support policy on the various operating systems and the interface connections they support. EPSON technical support representatives will only be able to support customers who have Epson products that are configured in accordance with the operating system requirements outlined here and in the product's documentation. Epson customers experiencing problems on an Epson product connected to an add-in USB 2.0 or IEEE-1394 interface that does not meet the minimum system requirements will be asked to contact the interface product vendor or computer manufacturer for technical support.

This document is not model specific. It does not include other important system requirements required to determine product compatibility on a user's computer. To determine product support compatibility, please refer to the specific scanner's minimum system requirements found on the outside of the product box, or visit Epson's web site at [www.epson.com](http://www.epson.com).

The guidelines below were compiled from Microsoft's and Apple's Support websites and their published system requirements for supported interface connectivity. For more information on Windows and Macintosh Interface support please refer to Microsoft's online Knowledge base at [www.microsoft.com](http://www.microsoft.com) or Apple's web site at [www.apple.com](http://www.apple.com). For information on add-in 3<sup>rd</sup> party interface products please refer to the vendor's documentation or product support web site.

<b>Subject:</b>	Smart Panel Copy Utility may produce copies with a light gray/blue/pink background when printing to non-EPSON printers.		

---

## Description of issue:

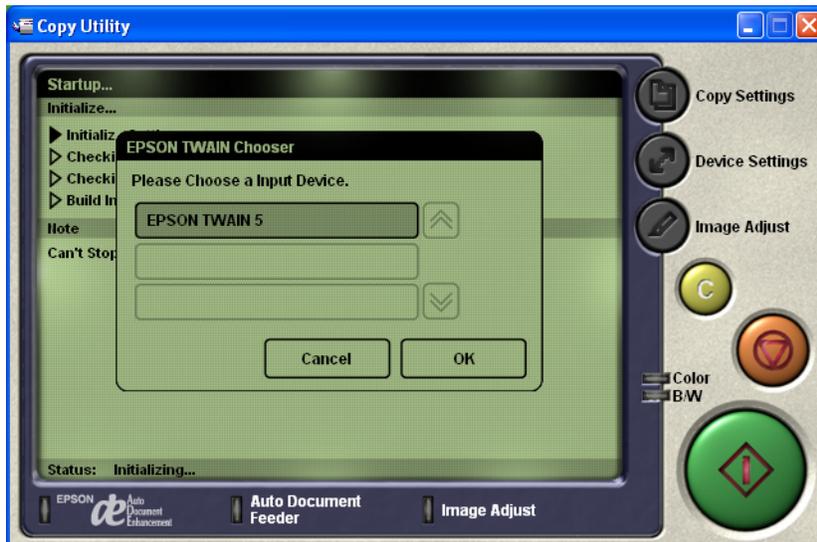

If you are using Copy from EPSON Smart Panel 2.5/2.6 or you installed the Copy utility 2.00A patch for Smart Panel 2.0A/1.0.xA, you may find that the program produces copies with a light gray/blue/pink background.

## Reason:

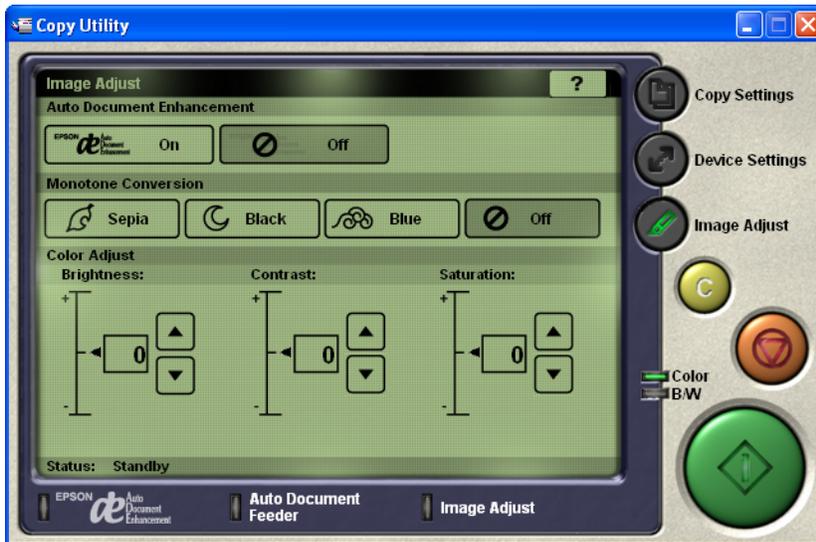

This is because when printing to non-EPSON printers with the Copy utility, the Automatic Document Enhancement feature is turned off by default.

## Solution:

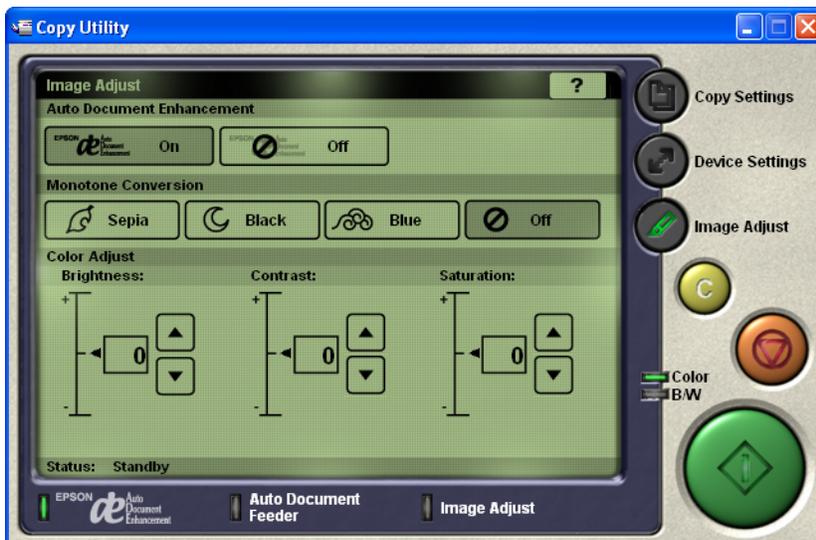

To remove the background, you must enable Automatic Document Enhancement. To turn on this feature, launch the Copy applet by double-clicking on its icon. Select Epson TWAIN 5 at the following window and click "OK".

Click on the “Image Adjust” button. You will notice the Auto Document Enhancement OFF button is selected (highlighted in dark gray).

Click the ON button. You will now notice that this button is selected (highlighted in dark gray).

Now click on the large green Copy button, your image will be scanned and printed. The copy of your document should look very close to the original with no background colors added.

**Note:** The Copy utility was designed to scan and print a copy of a Letter size (8.5” X 11”) document. If your document is not a full letter-size piece of paper, then the portion of the scanner’s document mat that is showing will be included as part of your copy. Some bright white papers can cause a noticeable contrast between the document and the document mat. As a result the Copy utility may recognize the exposed document mat as a having a light blue color. In this case you may still see a light blue background on your printout where the document mat was showing.

<b>Subject:</b>	Epson Smart Panel & Security Rights on Windows 2000		

---

This bulletin was created to inform you of an issue with Epson Smart Panel running under Windows 2000. This issue affects Smart Panel version 1.0.xA (1.01, 1.02, 1.03), bundled with the Perfection 640U/1240U/1640SU series and version 2.0A, which is included with the Perfection 1250/1650/2450 series.

## **Description of the Issue:**

When running Windows 2000, if Epson Smart Panel is installed from the scanner software CD, and is used by members of the Administrator or Power Users Group, the program works normally. If a member of a restricted group (Users, Backup Operators, Replicator, Guest) logs on to a computer on which an Administrator or Power User installed Smart Panel, the user will receive an error when booting up to the desktop. A dialog box with an "OK" button pops up displaying the following error message:

"There is no Registry data for EPSON SMART PANEL!"

Clicking "OK" in the dialog box does not remove the error message, even if you click OK repeatedly. The computer is unusable at this point and eventually locks up. To recover, the user must perform a hard reset and log in as a Power user or Administrator.

If a member of the "Restricted User" group attempts to install the Epson Smart Panel software, one of two things happens: (1) Windows prevents the user from starting installation or (2) the installation completes and all users, including Administrators and Power Users will see the "Registry Data Error" when booting to the desktop.

## **Reason:**

Smart Panel loads "Start" button monitoring during Windows startup. When logged in as a restricted user, Windows returns an error message as described above because the user has insufficient rights. Specifications for Smart Panel do not provide sufficient rights for restricted users to install and use Smart Panel on Windows 2000. Only Administrators, users with Administrator rights and Power users have sufficient access privileges to install and use Smart Panel. If a member of a Restricted user group is able to install Epson Smart Panel, the program will need to be manually removed by an Administrator logged on in "Safe Mode." Using the "Search" utility in Windows 2000, delete all files for "Epson Smart Panel for Scanners." A System Administrator will then need to add the "Restricted user" to the Power Users Group before the user can install and use Smart Panel.

<b>Subject:</b>	Copy Utility Workaround for Non-Epson Printers		

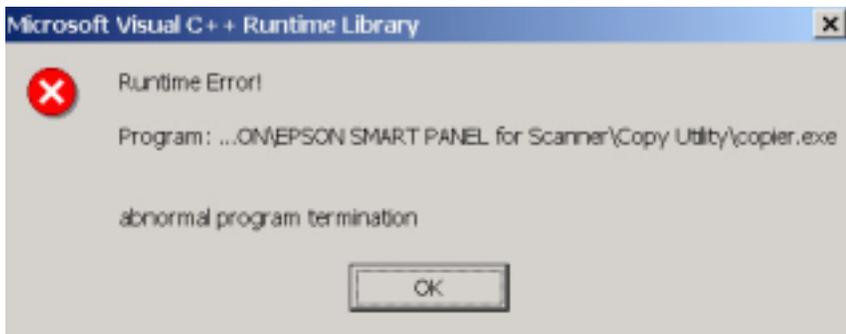

---

This bulletin was created to provide information on using Smart Panel's Copy Utility with non-Epson printers in Windows. The following sections describe a workaround that can be used when Copy Utility has problems working with non-Epson printers.

## Description of Issue:

Epson Smart Panel includes a utility called Copy that is used for scanning and printing documents. Although Copy works with non-Epson printers it does not support all models. Epson periodically releases updates to support the newer models. However, since new printers are continually being released to market, the current Copy update may not work with the latest models.

When Copy Utility launches, it first initializes the scanner and printer. If it does not recognize the printer, the program will normally return an error. The error message may vary depending on the operating system and version of Copy. In some cases, the program won't generate an error dialog; instead, it will launch and then quickly shut down. If you get the error dialog, it will typically look like one of those listed below. When you click OK to close the dialog, the program takes you back to the Smart Panel main user interface.

## Workaround:

As a temporary solution, select another Windows default printer (i.e. one that's compatible with Copy) and then launch Copy. In Copy, change the printer back to the one that you want to use. Click the green and Copy button to scan and print.

Follow these steps to configure Copy for the workaround.

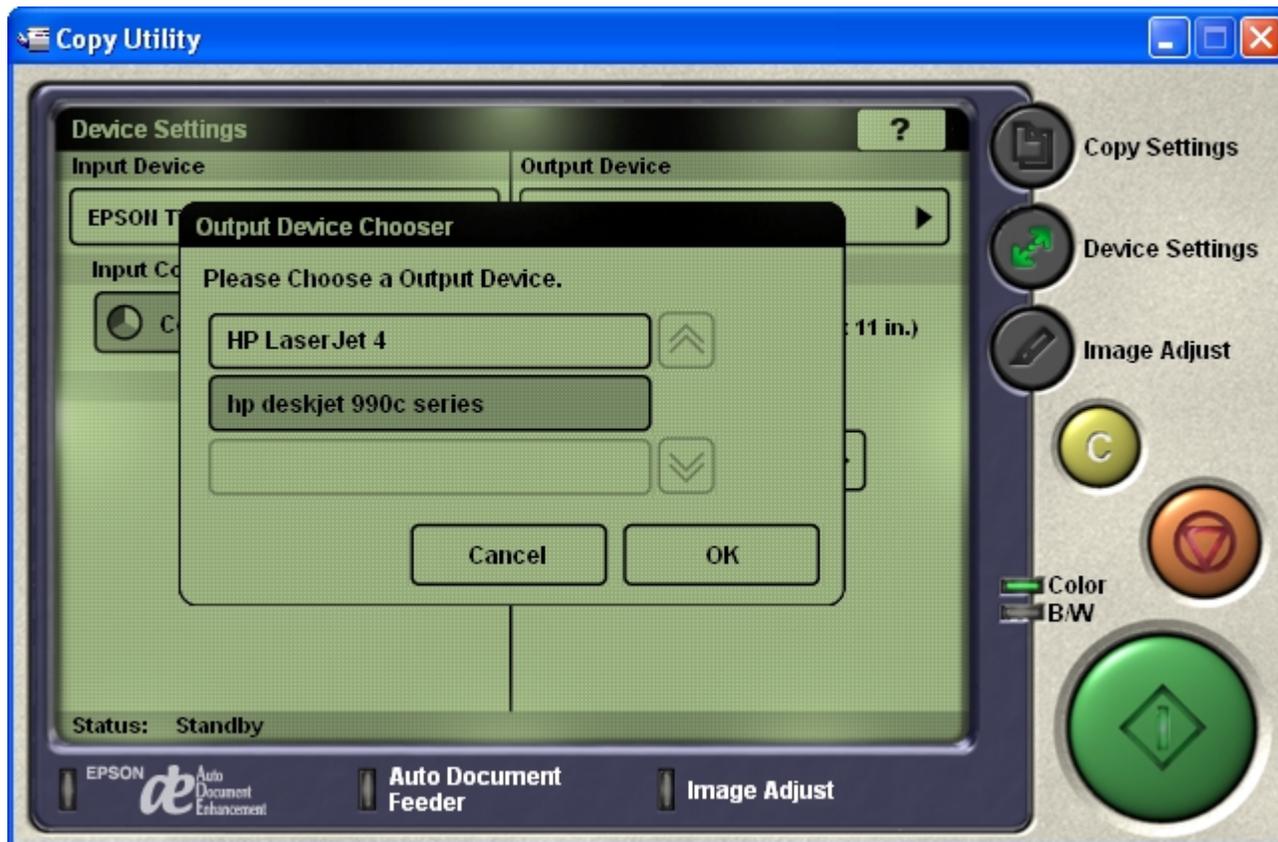

- 1) First, verify that you have installed the latest version of Copy (currently 2.00A). Launch Copy and look for a green screen. This is version 2.00A and it should look like this:

If you don't see this on your screen then visit our web site at [www.epson.com](http://www.epson.com) and download the Copy update.

- 2) Once you have installed the update, test your printer in Copy. If you get an error then go to the next step.
- 3) Click the Start button and then click Settings. Select Printers. You can also use Control Panel to select Printers (Printers and Faxes for Windows XP). In Printers, use the Add Printer Wizard to add a printer. For Windows 98 and up, you can try the HP LaserJet 4. For Windows 2000 and XP, the Stylus Photo 750 ESC/P2 works fine. For Windows 95, you'll need to use an older model such as the HP LaserJet 3 series. Keep in mind that other models can be used. If one model doesn't work then use another one.
- 4) Follow the on-screen instructions to install the printer. Once completed verify that it is the default printer.
- 5) Launch Copy. If the new default printer is compatible, the program will open normally.

- 6) Click the Device Settings button. This will bring up the Device Settings user interface. In the Output Device field (the default printer will be listed here), click on the arrow. This will bring up the Output Device Chooser window. The screen should look like this.

- 7) Change the printer name to the one you want to use and then click OK. Click on the Green button to start scanning.

---

This bulletin was created to provide information on using Smart Panel's Copy Utility with non-Epson printers on a Macintosh computer. The following sections describe a workaround that can be used when Copy Utility has problems working with non-Epson printers.

## **Description of Issue:**

Epson Smart Panel includes a utility called Copy that is used for scanning and printing documents. Although Copy works with non-Epson printers, it does not support all models. Epson periodically releases updates to support the newer models. However, since new printers are continually being released to market, the current Copy utility may not work with the latest models.

When Copy Utility launches it first initializes the scanner and then the printer. If it does not recognize the printer, the program may lock up the system or simply stop running. You may have to use the Force Quit command or restart the computer to recover.

## **Workaround:**

As a temporary solution, select the LaserWriter as the default printer and then launch Copy. In Copy, select the printer that you want to use. Click the Copy button to auto-scan and print. You can use this workaround with Smart Panel 1.01A, 1.02A, 1.03A and 2.0A.

Follow these steps to configure Copy for the workaround.

- 1) Open Chooser and select a different default printer. We recommend using the LaserWriter. Close Chooser when finished.
- 2) Launch Copy. Click on the Target Printer button. This automatically opens Chooser. Select the actual printer you will use to scan and print. After completing your selection, click OK to close Chooser.
- 3) Click Print Setting and configure the printer driver settings as needed. Click OK to close the Settings dialog box.
- 4) Click the Copy button to start scanning.
- 5) When you are finished using Copy and you have no other print jobs, open Target Printer and set the default printer back to the LaserWriter. Close Copy.

<b>Subject:</b>	Copy Utility Workaround for Non-Epson Printers		

This bulletin was created to provide information on using Smart Panel's Copy Utility with non-Epson printers in Windows. The following sections describe a workaround that can be used when Copy Utility has problems working with non-Epson printers.

## **Description of Issue:**

Epson Smart Panel includes a utility called Copy that is used for scanning and printing documents. Although Copy works with non-Epson printers it does not support all models. Epson periodically releases updates to support the newer models. However, since new printers are continually being released to market, the current Copy update may not work with the latest models.

When Copy Utility launches it first initializes the scanner and then the printer. If it does not recognize the printer, the program will return an error. The error message varies depending on the operating system and version of Copy. You will most likely encounter one of the error dialogs illustrated below. When you click OK to close the dialog, the program takes you back to the Smart Panel main user interface.

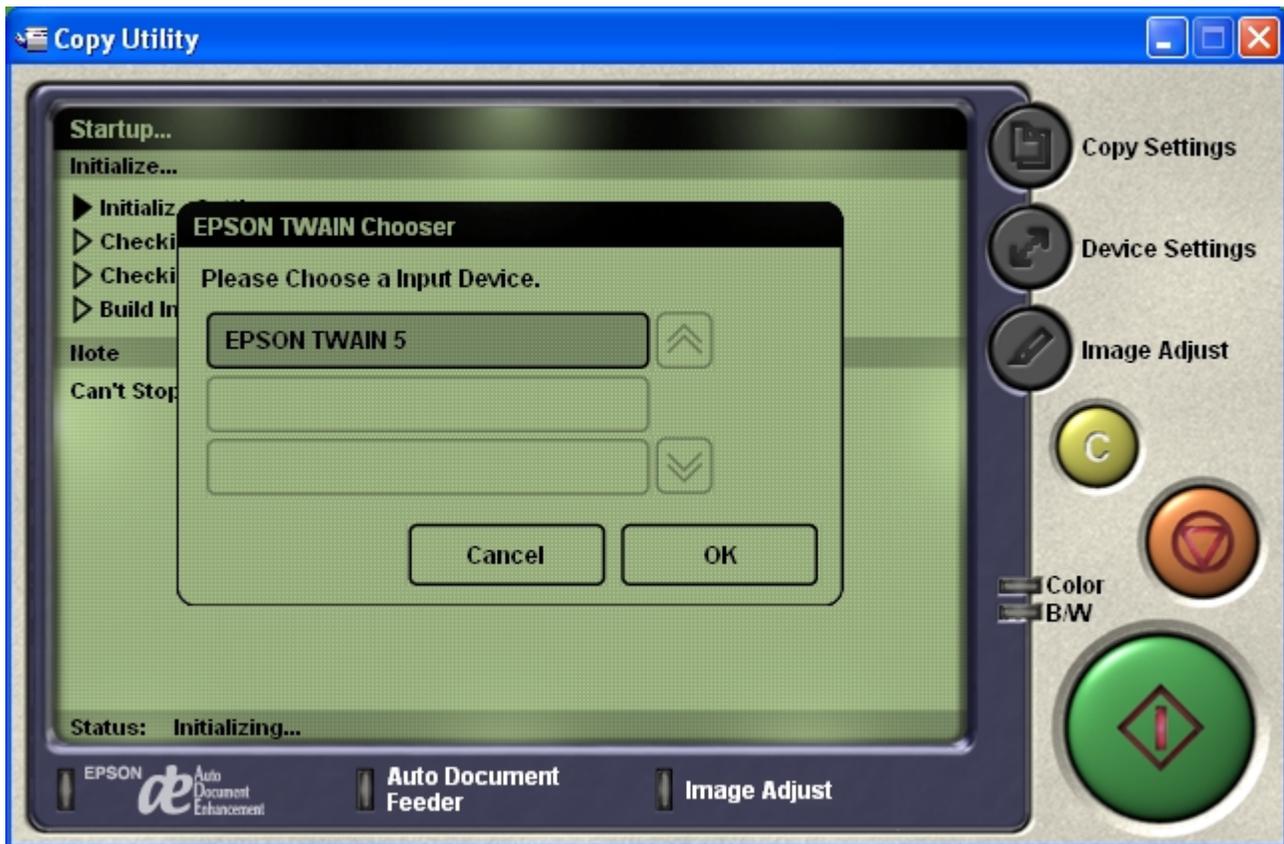

## **Workaround:**

As a temporary solution, select another Windows default printer (i.e. one that's compatible with Copy) and then launch Copy. In Copy, change the printer back to the one that you want to use. Click the green and Copy button to scan and print.

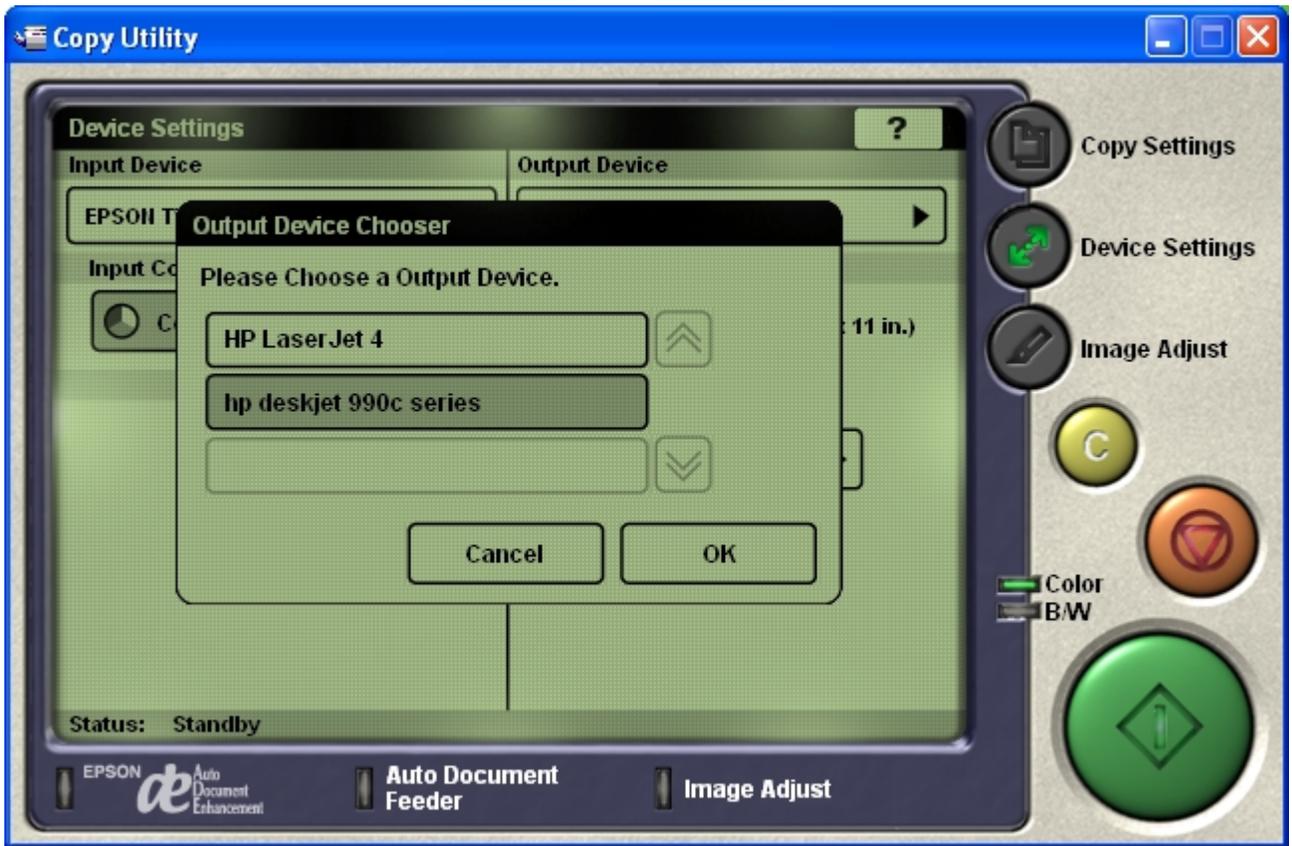

Follow these steps to configure Copy for the workaround.

- 1) First, verify that you have installed the latest version of Copy (currently 2.00A). Launch Copy and look for a green screen. This is version 2.00A and it should look like this:

If you don't see this on your screen then visit our web site at [www.epson.com](http://www.epson.com) and download the Copy update.

- 2) Once you have installed the update, test your printer in Copy. If you get an error then go to the next step.
- 3) Click the Start button and then click Settings. Select Printers. You can also use Control Panel to select Printers (Printers and Faxes for Windows XP). In Printers, use the Add Printer Wizard to add a printer. For Windows 98 and up, you can try the HP LaserJet 4. For Windows 2000 and XP, the Stylus Photo 750 ESC/P2 works fine. For Windows 95, you'll need to use an older model such as the HP LaserJet 3 series. Keep in mind that other models can be used. If one model doesn't work then use another one.
- 4) Follow the on-screen instructions to install the printer. Once completed verify that it is the default printer.
- 5) Launch Copy. If the new default printer is compatible, the program will open normally.
- 6) Click the Device Settings button. This will bring up the Device Settings user interface. In the Output Device field (the default printer will be listed here), click on the arrow. This will bring up the Output Device Chooser window. The screen should look like this.

- 7) Change the printer name to the one you want to use and then click OK. Click on the Green button to start scanning.

<b>Subject:</b>	Scan to E-mail patch for Smart Panel 2.0A that provides compatibility with MS Outlook 2000/XP and Outlook Express 6.0 on Windows 98/Me/2000/XP		

---

This bulletin was created to inform you of a patch that is now available for the Scan to Email utility that is included on Epson's Smart Panel 2.0A. The patch (v.2.01P01E) fixes an issue that may occur when using Scan to Email with MS Outlook 2000/XP and Outlook Express v.6.0 on Windows 98/Me/2000/XP. It may cause the Launch/Scan Assistant to display a warning message that there is no supported E-mail program on this system, or that the scanner is not ready. Some Windows XP compliant email programs are new versions and may not be supported by the Scan to Email Utility.

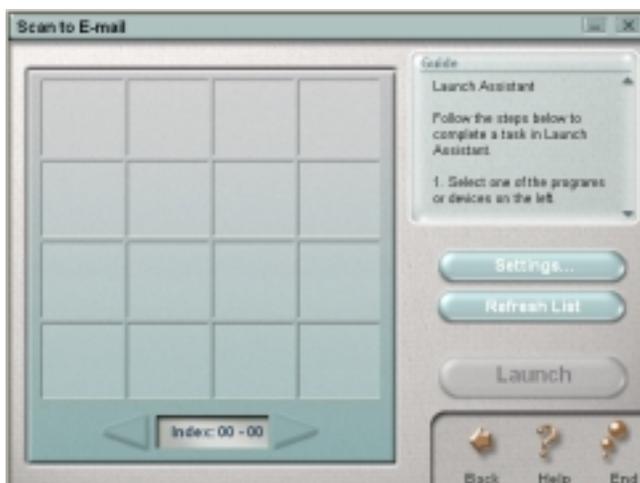

## **Description of Issue:**

When trying to use Scan to Email with MS Outlook 2000/XP and Outlook Express version 6.0 you will be able to invoke a scan but you may see one of the following warning messages. Scan to Email only supports MS Outlook and Outlook Express 4.5 and 5.0.

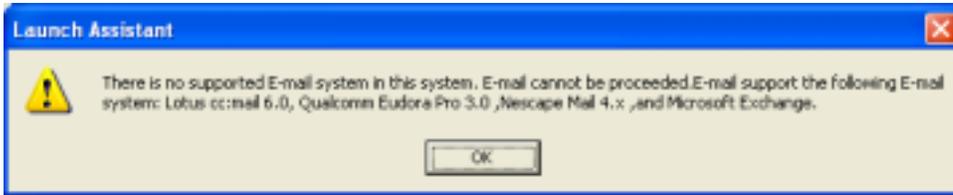

**Note:** Windows XP comes with MS Outlook Express 6.0. Outlook Express 6.0 can also be installed on Windows 98/2000/Me. If you install Internet Explorer 6.0, it includes Outlook Express 6.0 and will automatically install this component.

When you complete a scan, the Launch Assistant window appears. If there are no compatible e-mail applications, you won't see any Email Application icons (see figure below).

Clicking on "Refresh List" brings up this Warning window again.

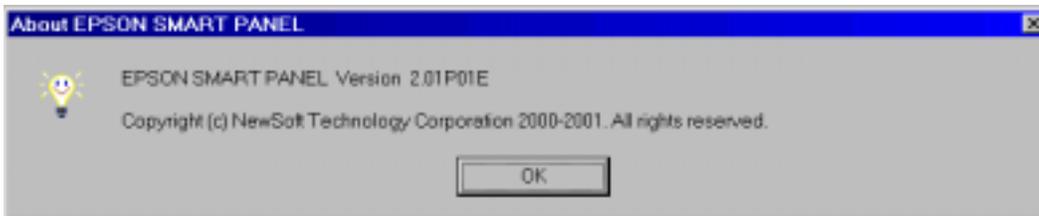

**Solution:**

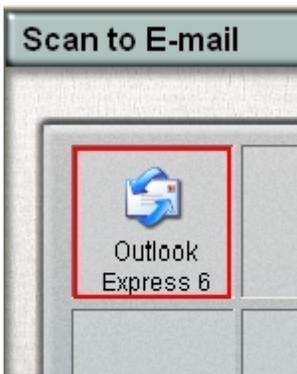

Download the patch from Epson's Support Web site at <http://support.epson.com>. The Installer should find the location of your Epson Smart Panel software and install the update automatically.

Run Setup.exe and the Install wizard will find the location of Epson Smart Panel software on your hard drive and prompt you to continue. Click "Next." The Install wizard will then finish. Click "Finish" to complete the update and exit.

To verify the patch was successful, open Epson Smart Panel and click on the Light bulb icon in the upper left-hand corner. Select "About" from the pull-down menu. You should see v.2.01P01E (see figure below).

Start the Scan to Email Utility and run through the steps again. You will now find that your Email Program shows up as a registered application in the Launch Assistant window (see figure below).

After you select your Email Program, it will open with a "Compose New" window and your scanned file will be attached to the Email. Enter an email address, a subject line, and some text in the body of the mail, and then click "Send".

**Originator:** TC  
**Authorization:** *[Signature]*

This bulletin was created to inform you of an issue under Windows Me where the Photo Print Utility in Epson Smart Panel Version 2.0 will display an error message if attached to an Epson Stylus Photo 780/890/1280/785EPX printer running printer driver version 6.0

## Description of Issue:

The Photo Print Utility in Epson Smart Panel Version 2.0 does not work properly with the original Windows Me driver found on the following printer software CD's with driver ver 6.0.

Stylus Photo 780 CPD-11725  
Stylus Photo 785EPX CPD-12100  
Stylus Photo 890 CPD-11718  
Stylus Photo 1280 CPD-11719

1. The printer driver version can be verified by checking the lower left-hand corner of the "Main" Tab of the Printers Properties Window.

2. One of the following error messages may be seen when using the Photo Print Utility with the printer driver combination listed above.

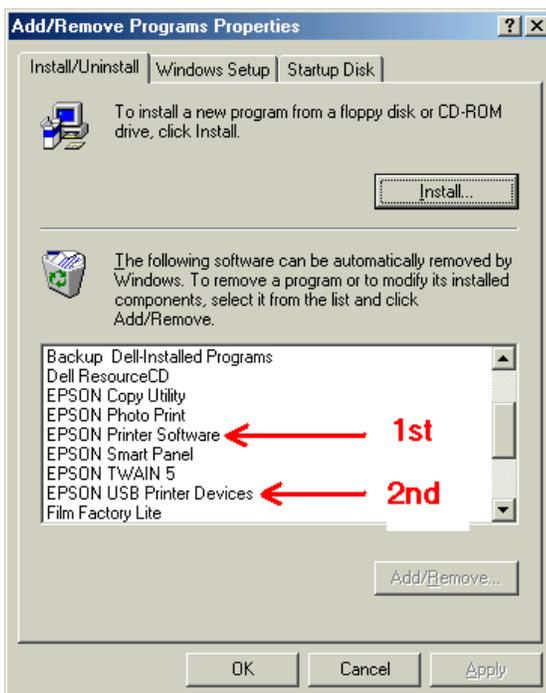

### Errors you may see with the Photo Print patch ver. 1.31E installed

### Solution:

To correct this issue the latest printer driver for the Stylus Photo 780/890/1280/785EPX printers is required. You can download the latest printer drivers from Epson's Driver web site at [support.epson.com](http://support.epson.com). After you have downloaded the appropriate printer driver, see below for the proper installation instructions.

1. Remove version 6.0 of the printer driver from Windows Control Panel by clicking on the Add/Remove Programs icon and select "EPSON Printer Software".
2. Click "Add/Remove" button. Once this opens up you will then see your model printer, highlight it and select "OK". Answer yes to all questions about removing files and Status Monitor 3.
3. Once the Printer has been removed, you can then also remove "EPSON USB Printer Devices."
4. You will be asked to reboot at this point, power off or disconnect the printer and reboot your computer.
5. After you have rebooted your computer run the setup.exe program from the location of the extracted download file to install the new version of your printer driver.

6. Follow the instructions used in the "Start Here" poster of your printer or follow the directions on the screen, only connect the USB cable or power on the printer when told to do so by the driver installation software.
7. Finish by verifying the updated driver versions as follows:
  - Stylus Photo 780 - Version 6.02/P
  - Stylus Photo 890/1280 - Version 6.01/P
  - Stylus Photo 785EPX – Version 6.00 – *Note: The updated driver version number is the same as the original but the currently posted driver is an updated one and it will resolve the issue.*
8. Once the printer driver has been installed, verify that the issue has been resolved by opening Epson Smart Panel and clicking on the Photo Print Button. You will see a progress window that says "Setting up printer."
9. Before you print, have your media type, print size, and Printer Driver set to the correct settings. Put a photo on the document glass and Click the "Print" button.
10. When the "Select TWAIN source" window pops up, select "EPSON TWAIN 5" and click OK. Your photo will be scanned and printed.

Note: You can launch EPSON Photo Print as a standalone application, without needing to launch Epson Smart Panel. The Photo Print Utility program automatically puts an Entry in the Start menu. To find this entry click on: Start>Programs>EPSON Scanner>EPSON Photo Print. The program will also put an "EPSON Photo Print" shortcut icon on your Desktop; you can launch the Photo Print Utility from the shortcut. If you do not want this icon on the desktop, simply drag it to the Recycle Bin or highlight the shortcut icon and hit the delete key on your keyboard

*\*Note: Epson and other printer vendors continually release new models into the market. If your printer does not work with the new Copy utility, keep checking the Epson web site for the next revision. The Copy utility is updated on a regular basis.*

The new Copy Utility can be downloaded from Epson's web site. Enter the URL listed below on your browser to access this web page. From the Support page, select your product. On the Downloads page double-click on the Copy Utility program and follow the on-screen instructions to complete the download. <http://support.epson.com/filelibrary.html>

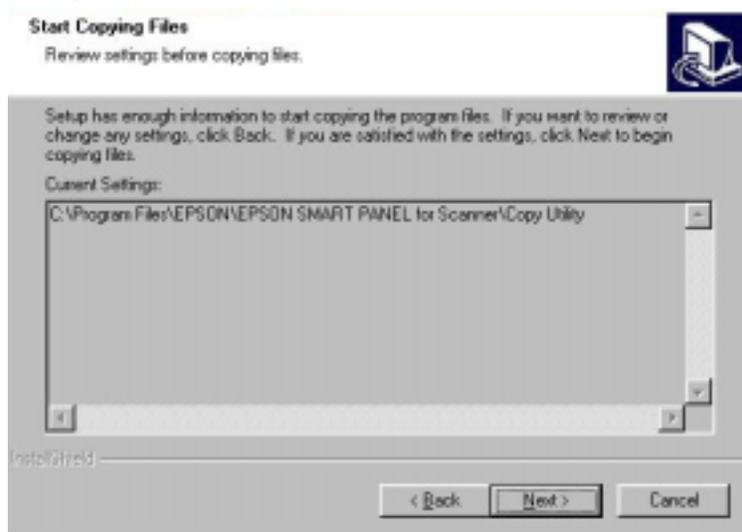

## Installation Instructions:

Use these steps to install Copy Utility.

1. Close Smart Panel if it is running.
2. From the *Start* button click **Run** and then **Browse**.
3. Search for the folder that contains the downloaded Copy Utility file (By default this folder is called EPSON, unless you have manually specified the download folder location).
4. Double-click this file to extract the Setup files.
5. Double-click SETUP.EXE. The installation will start and the following screen will launch.

6. Click *Next*. The Confirm File Deletion dialog box appears. This is required before the new version of the Copy Utility is installed.
7. Click OK to start uninstalling the files. You'll see a Setup Status progress screen while the files are being removed.
8. When completed, the Maintenance Complete screen appears next. Click Finish.
9. If you have Smart Panel 1.01A or 1.02A installed on your computer system then you will need to rerun the SETUP.EXE to complete the installation and copy the updated Copy Utility files to your hard drive. Follow steps 1 through 5 to complete this process, and then go to step 10 to continue with the installation.
10. If you have Smart Panel 1.03A or 2.00A then the next screen will pop up automatically.

11. Click *Next*. You will see a Setup Status progress screen while the files are being copied to your hard drive.
12. When all files have been copied, the InstallShield Wizard Complete screen appears. Click *Finish*.
13. Launch Smart Panel and open Copy Utility. If you see the following Startup screen, then you have successfully installed the update.

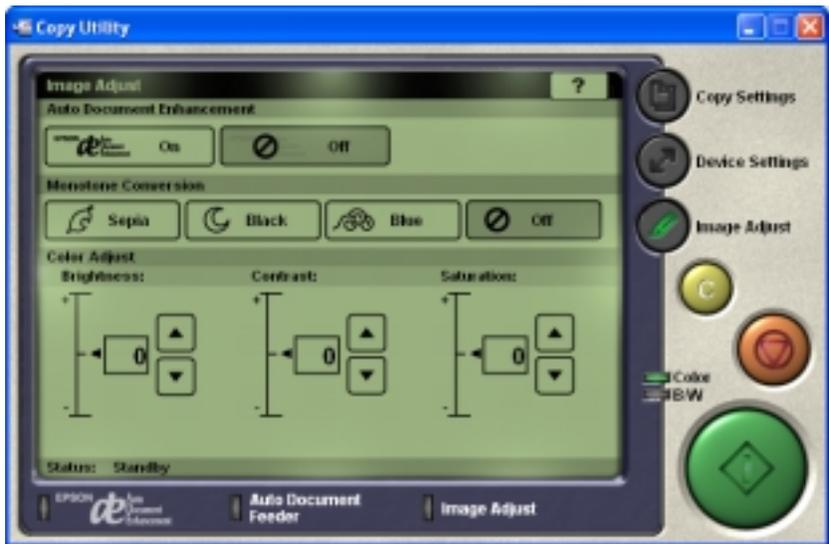

14. The last thing you should do before copying is to turn on the Auto Document Enhancement.

**Note:** After installing the Copy Utility 2.00A patch you may find that the Copy Utility produces copies with a Light gray/blue/pink background. This is because in the Copy Utility 2.00A the Automatic Document Enhancement feature is off by default. To turn it on, click on the Copy applet to open the Copy Utility. Select Epson TWAIN 5 at the following window and click “OK”.

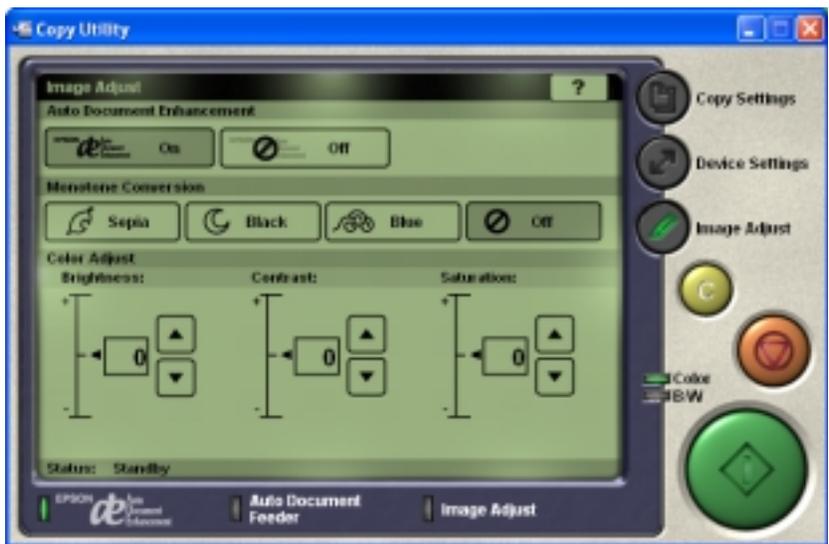

Click on the “Image Adjust” button - Auto Document Enhancement is off by default; notice “Off” is selected and dark gray.

Click on the Auto Document Enhancement button to turn this feature on, notice “On” is selected now and dark gray.

This will resolve the light gray/blue/pink background issue in Copy Utility 2.00A.

Now click on the large green Copy Button, your image will be scanned and printed. The copy of your document should look very close to the original with no background colors added.

**Note: The Copy Utility was designed to scan and print a copy of a Letter size (8.5” X 11”) document. If Your document is not a full Letter size piece of paper, then the portion of the scanner’s document mat that is showing will be included as part of your copy. Some bright white papers can cause a noticeable contrast between the document and the document mat. As a result the Copy Utility may recognize the exposed document mat as a having a light blue color. In this case you may still see a light blue background on your printout where the document mat was showing.**
