Use the Interactive Pen

1. Hold the pen perpendicular to the board, as shown below.
2. To left-click, tap on the board.
3. To double-click, tap twice.
4. To right-click, press the button on the side of the pen.
5. To click and drag, tap and drag with the pen.
6. To move the cursor, hover over the board without touching it.
7. When you are finished using the pen, simply place it in an area away from the projection screen.

Note: The pen turns off automatically after about 20 minutes of inactivity. Tap the pen tip or press the button on the side to turn the pen back on.

Use PC Free Annotation

1. Press one of the source buttons on the remote control to select the source for the image you want to annotate.
2. To activate the toolbar, tap the board with the pen.
3. To move the cursor, hover over the board without touching it.
4. To right-click, press the button on the side of the pen.
5. To left-click, tap on the board.

Two different toolbars are available in PC Free Annotation mode, one for annotation mode and one for whiteboard annotation mode.

• Annotation mode displays the built-in toolbar on whatever image is being projected.
• Whiteboard annotation mode lets you project a white or black screen or background pattern, and use the pen to write or draw as you would on a chalkboard or dry erase board.

Start Here

Follow the steps on this card to get started with your BrightLink:
1. Connect your computer and turn on the projector icon.
2. Make sure the software is installed.
3. Use the remote control.
4. Use the interactive pen.
5. Use PC Free Annotation.

Headlights

The Epson PrivateLine service is for you!
All you have to do is call (800) 637-7661. This service is available for the duration of your warranty period.
You may also speak with a projector support specialist by dialing (562) 276-4394 (U.S) or (905) 709-3839 (Canada).
Support hours are 6 AM to 8 PM, Pacific Time, Monday through Friday and 7 AM to 4 PM, Pacific Time, Saturday.
Days and hours of support are subject to change without notice. Toll or long distance charges may apply.

The projector control toolbar lets you control the projector from the screen just as you would using the remote control.

• Without a computer, you can use the toolbar that is built into the projector (PC Free Annotation). This lets you annotate images from a document camera, tablet, DVD player, or other source connected to your projector.

Students and colleagues can connect their own laptops and annotate on the fly using the built-in toolbar, without installing software.
Connect Your Computer and Turn on the Projector

1. Connect the USB cable from the projector’s USB-B port directly to any available USB port on your computer.

2. Connect an HDMI or VGA cable from the projector to your computer.

3. Turn on the projector by pressing the power button on the remote control.

4. The default language of the menu system is English. To select another language, press the Menu button on the remote control, select the Extended menu, and press Enter. Select Language and press Enter. Press the Menu button to exit the menu system.

Turn on Your Computer

• If your computer is already turned on, proceed to Step 3.
• If your computer is turned off, press the power button to turn it on.

Display an Image from Your Computer

5. Display an image from your computer. If the image doesn’t appear, try one of the following:
   - On some Windows laptops, you may need to hold down the Fn key on the keyboard and press FT or the function key that lets you display on an external monitor. It may have an icon such as or it may be labeled CRT_LCD.
   - On a Mac, you may need to open System Preferences and select Displays. Click the Arrangement tab and select the Mirror Displays check box.
   • Try pressing the Source Search button on the remote control.

If you already have interactive software on your computer, or you may need to install it. For OS X, you need the Easy Interactive Driver and Easy Interactive Tools (or other interactive software). For Windows, you only need Easy Interactive Tools (or other interactive software).

Here’s how to find out if the Easy Interactive Tools software is installed on your computer. If the software is not installed, follow the steps in the next column.

For Windows 8.x:

- Navigate to the Apps screen and select Easy Interactive Tools Ver. 3.
- Start Easy Interactive Tools and select Easy Interactive Function.

For Windows 10:

- Navigate to the Apps screen and select Easy Interactive Tools.
- Open Easy Interactive Tools and select Easy Interactive Function.

For Other Windows versions:

- Select Start > All Programs > EPSON Projector > Easy Interactive Tools Ver. 3.
- If you see Easy Interactive Tools Ver. 3, the software is installed.

If you need to install the Easy Interactive Tools software, do one of the following:

• Use the CD that came with the projector, labeled “EPSON Projector Software for Easy Interactive Function.”

Download the most up-to-date version from: epson.com/brightlinkdownloads (U.S.) or epson.ca/brightlinkdownloads (Canada). global.epson.com/砜porte (Latin America; site available in Spanish).

For more information about Easy Interactive Tools, see the online BrightLink User’s Guide.

Make Sure Interactive Software Is Installed

1. To start calibration, do one of the following:
   • Press the User button to start auto-calibration, then wait until calibration is complete.
   • Follow the steps below to calibrate manually:

2. Press the Menu button on the remote control, select the Extended menu, and press Enter.

3. Select the Easy Interactive Function setting and press Enter.

4. Select Manual Calibration, then press Enter.

5. When you see this screen, press Enter to select Yes.

If the pen position and cursor location don’t match, you can try auto calibration, or you can calibrate manually for even greater accuracy. You don’t need a computer, and you won’t need to calibrate again unless the projector or image is moved, or the image is resized.

Calibrate

If the pen position and cursor location don’t match, you can try auto calibration, or you can calibrate manually for even greater accuracy. You don’t need a computer, and you won’t need to calibrate again unless the projector or image is moved, or the image is resized.

For more detailed instructions, see the online BrightLink User’s Guide.

To perform manual calibration:

Follow the steps below to calibrate manually:

1. Press the Menu button on the remote control, select the Extended menu, and press Enter.

2. Select the Easy Interactive Function setting and press Enter.

4. When you see this screen, press Enter to select Yes.

5. If the pen position and cursor location don’t match, you can try auto calibration, or you can calibrate manually for even greater accuracy. You don’t need a computer, and you won’t need to calibrate again unless the projector or image is moved, or the image is resized.

6. If the pen position and cursor location don’t match, you can try auto calibration, or you can calibrate manually for even greater accuracy. You don’t need a computer, and you won’t need to calibrate again unless the projector or image is moved, or the image is resized.

For more information on using the remote control:

• See the online BrightLink User’s Guide.
• Go to the training section and watch a video or refer to the online BrightLink User’s Guide.

For more detailed instructions, see the online BrightLink User’s Guide.
Connect Your Computer and Turn on the Projector

1. Connect the USB cable from the projector's USB-B port directly to any available USB port on your computer.

2. Connect an HDMI or VGA cable from the projector to your computer.

3. Turn on the projector by pressing the power button.

4. The default language of the menu system is English. To select another language, press the Menu button on the remote control. Select Extended and press 

5. Display an image from your computer. If the image doesn’t appear, try one of the following:
   - On some Windows laptops, you may need to hold down theFnkey on the keyboard and press the function key that lets you display on an external monitor. It may have an icon such as CRT/LCD or it may be labeled CRT/LCD.
   - On a Mac, you may need to open System Preferences and select Displays. Click the Arrangement tab and select the Mirror Displays check box.
   - Try pressing the Source Search button on the remote control.

6. When you already have interactive software on your computer, or you may need to install it. For OS X, you need the Easy Interactive Driver and Easy Interactive Tools (or other interactive software). For Windows, you only need Easy Interactive Tools (or other interactive software).

   Here’s how to find out if the Easy Interactive Tools software is installed on your computer. (If the software is not installed, follow the steps in the next column.)

   OS X: Look for the Easy Interactive Driver and Easy Interactive Tools folders in the Applications folder on your hard drive. (If you see these folders, the Easy Interactive software is installed.)

   Windows 8.1: Navigate to the Apps screen and select Easy Interactive Tools.

   Other Windows versions:
   - Select Start -> All Programs or Programs -> EPSON Projector -> Easy Interactive Tools Ver. 3.
   - If you see Easy Interactive Tools Ver. 3, the software is installed.

Make Sure Interactive Software is Installed

1. Turn on projector by pressing the power button.

2. Connect an HDMI or VGA cable from the projector to your computer.

3. Make sure interactive software is installed. If it isn’t installed, follow the steps in the next column.

4. If you need to install the Easy Interactive Tools software, do one of the following:
   - Use the CD that came with the projector, labeled “EPSON Projector Software for Easy Interactive Function.”
   - Download the most up-to-date version from:
     - epson.com/brightlinkdownloads (U.S.)
     - epson.ca/brightlinkdownloads (Canada)
     - global.latin.epson.com/soporte (Latin America; site available in Spanish).

Calibrate

1. To start calibration, do one of the following:
   - Press the User button to start auto-calibration, then wait until calibration is complete.
   - Follow the steps below to calibrate manually.

2. Press the Menu button on the remote control, select the Extended menu, and press 

3. Select the Easy Interactive Function setting and press 

4. Select Manual Calibration, then press 

5. When you see this screen, press 

6. Touch the circles on the screen with the pen to perform manual calibration.

For more detailed instructions, see the online BrightLink User’s Guide.
***Connect Your Computer and Turn on the Projector***

1. Connect the USB cable from the projector’s USB-B port directly to any available USB port on your computer.
2. Connect an HDMI or VGA cable from the projector to your computer.
3. Turn on the projector by pressing the  power button on the remote control.

**Display an image from your computer.** If the image doesn’t appear, try one of the following:

- On some Windows laptops, you may need to hold down the Function key on the keyboard and press F8 or the function key that lets you display on an external monitor. It may have an icon such as CRT LCD or it may be labeled CRT/LCD.
- On a Mac, you may need to open System Preferences and select Displays. Click the Arrangement tab and select the Mirror Displays check box.
- Try pressing the Source Search button on the remote control.

### Manual Calibration

Follow the steps below to perform manual calibration.

1. To start calibration, do one of the following:
   - Press the User button to start auto-calibration, then wait until calibration is complete.
   - Follow the steps below to calibrate manually:
2. Press the Menu button on the remote control, select the Extended menu, and press  .
3. Select the Easy Interactive Function setting and press  .
5. When you see this screen, press  to select Yes.
6. Touch the circles on the screen with the pen to perform manual calibration.

For more detailed instructions, see the online BrightLink User’s Guide.

### Using the Remote Control

- **To perform manual calibration:**
  - Press the User button to start auto-calibration, then wait until calibration is complete.
  - Follow the steps below to calibrate manually:
  - Press the Menu button on the remote control, select the Extended menu, and press  .
  - Select the Easy Interactive Function setting and press  .
  - Select Manual Calibration, then press  .
  - When you see this screen, press  to select Yes.
  - Touch the circles on the screen with the pen to perform manual calibration.

For more information on using the remote control:
- See the online BrightLink User’s Guide.
- Go to the transaction site and watch a video or see things like epson.com/brightlinkvideos (U.S.) or epson.ca/brightlinkvideos (Canada).
The projector’s built-in toolbar lets you annotate images from other devices that have been connected to the projector, such as a document camera, tablet, or other source.

1. Press one of the source buttons on the remote control to select the source for the image you want to annotate.

2. To left-click, tap on the board.

3. To double-click, tap twice.

4. To right-click, press the button on the side of the pen.

5. To click and drag, tap and drag with the pen.

6. To move the cursor, hover over the board without touching it.

When you are finished using the pen, simply place it in the holder or in the pen storage area below.

Note: The pen turns off automatically after about 20 minutes of inactivity. Tap the pen tip or press the button on the side to turn the pen back on.

To double-click, tap on the board with the pen.

To activate the toolbar, tap the board with the pen.

To close the toolbar, select the icon at the top of the toolbar.

Note: Many of the built-in tools are the same as Easy Interactive Tools, but fewer functions are available.

The Epson PrivateLine® service is for you!

All you have to do is call (800) 637-7661. This service is available for the duration of your warranty period.

You may also speak with a projector support representative by dialing (562) 276-4394 (U.S) or (905) 709-3839 (Canada).

* In annotation mode, the black background does not appear.
The projector’s built-in toolbar lets you annotate images from other devices that have been connected to the projector, such as a document camera, tablet, or other source.

1. Press one of the source buttons on the remote control to select the source for the image you want to annotate.
2. To turn on the pen, tap the pen tip or press the button on the side of the pen. The green light comes on briefly. If the battery is low, the light flashes.
3. Hold the pen perpendicular to the board, as shown below.
4. To move the cursor, hover over the board without touching it.
5. When you are finished using the pen, simply place it in an area away from the projection screen.

Note: The pen turns off automatically after about 20 minutes of inactivity. Tap the pen tip or press the button on the side to turn the pen back on.

• Hold the pen perpendicular to the board, as shown below.
• To left-click, tap on the board.
• To double-click, tap twice.
• To right-click, press the button on the side of the pen.
• To click and drag, tap and drag with the pen.
• To move the cursor, hover over the board without touching it.

Two different toolbars are available in PC Free Annotation mode:
- Annotation mode displays the built-in toolbar on whatever image is being projected.
- Whiteboard annotation mode lets you project a white or black screen or background pattern, and use the pen to write or draw as you would on a chalkboard or dry-erase board.
