**RC90 Controller Specifications**

**Hardware Specifications**

- **Mounting Options**
  - Desktop, Wall, Floor, Ceiling
- **CPU**
  - 32 bit Ultra Low Voltage Processor
- **Robot Manipulator/Control**
  - Joint Control
  - Motion Type: CP (Continuous Path) motion, PTP (Point to Point) motion
- **Speed/Accel/Decel**
  - Fully programmable
- **Memory**
  - 64 MB Flash, 64MB DRAM, 128K SRAM (for backup variables)
- **Teaching Method**
  - Remote, Direct, MDI (Manual Data Input)
- **Digital I/O**
  - Standard I/O
  - Remote I/O
  - Number of Inputs/Outputs: 8 inputs/8 outputs (may be configured as additional standard I/O)
- **Communication Interfaces**
  - Ethernet
  - USB 1.1 or 2.0
  - USB port 1 - Direct 1 to 1 high speed connection to 1 controller
  - USB port 2 - for USB memory
- **Power Source**
  - 200-240 VAC Single Phase 50/60 Hz
- **Environment**
  - Temperature: 5-40 deg C
  - Humidity: 20-80% (no condensation)
- **Safety Standards**
  - CE Compliance, ANSI/RIA 15.06-1999
- **Error Handling**
  - Error History
  - Error Messages
  - User Errors
- **Languages**
  - English, French, German, Japanese, Chinese
- **Source Code Editor**
  - Color coded with auto syntax assist, code indent, and built-in EPSON SmartSense™ technology
- **Debugger**
  - Source level debugger with single step, breakpoints, watch variables, and built-in EPSON SmartSense™ technology
- **SPEL+ Language**
  - Powerful, easy to learn structured language with features such as: functions, parameter passing, variable types, long variable names, event traps, error handling and much more
- **Program Execution**
  - With EPSON RC+ Software
  - Smooth Start/Stop Motion

**Software Specifications**

- **Programming Language**
  - SPEL+
- **PC Requirements**
  - Operating System: Windows XP, Windows Vista or Windows 7
  - CPU Speed: 850 MHz (or faster)
  - Required HDD Space: 500MB (minimum)
- **Multitasking**
  - up to 16 simultaneous tasks
- **Error Handling**
  - Error History
  - Automatic error logging
  - User defined messages and errors
- **Source Code Editor**
  - Color coded, auto syntax assist, code indent, built-in EPSON SmartSense™ technology
- **Debugger**
  - Source level debugger with single step, breakpoints, watch variables, built-in EPSON SmartSense™ technology
- **SPEL+ Language**
  - Powerful, easy to learn structured language with functions, parameter passing, variable types, long variable names, event traps, error handling and much more
- **RC+ Development Environment (EPSON RC+ 5.0)**
  - Project based development environment with advanced ease of use features such as:
    - Project Explorer for easy access to application files
    - Point file spreadsheets for editing points
    - Run Window for fast development
    - Robot Manager for jogging, teaching points, and configuring robot parameters
    - I/O Monitor and I/O Label Editor allow easy setup and viewing of I/O status
    - Task Manager provides debugging/logging for all actively running tasks
- **PLC Connection**
  - Easy to use controller as PLC slave through DeviceNet, Profibus, Remote I/O connection
- **Available Options**
  - LS-Series SCARA Robots
  - RS232-C board (up to 8 ports available with 2 option boards)
  - ECP Software Option (External Control Point motion)
  - Fieldbus boards (DeviceNet, Profibus, CC-Link)
  - VB Guide (Microsoft.Net Communication Module)
  - Teach Pendant (TP2)

**Dimensions (mm)**

- Width: 380 (w) x 350 (d) x 169 (h)
- Weight: 7.5 kg

---

**Low Cost and High Performance**

- **Outstanding Accel/Decel Rates with Smooth Start/Stop Motion**
- **Industry Leading Ease of Use with EPSON RC+ Software**
- **High Performance Program Execution**
- **Controls EPSON LS-Series SCARA Robots**
- **Use as Standalone, PLC Slave or with PC**
- **PowerDrive Servo System Ensures Maximum Robot Performance**
- **High Installation Flexibility**

The EPSON RC90 controller was created as the reduced cost solution for factories looking for maximum value without giving up performance. This powerful control system comes standard with EPSON’s new low cost LS-Series SCARA robots opening up new realms of opportunities for manufacturers searching for a reduced cost automation solution by offering high performance and exceptional reliability users have come to expect from EPSON but, at a lower cost. The EPSON RC90 controller provides the ultimate experience in ease of use and reliability at an incredibly low price. In addition to all of these great features, the RC90 controller also provides our industry leading EPSON RC+ Controls software and lots of fully integrated options such as Vision Guidance, GUI Builder, Net support, DeviceNet, Profibus, Labview programmability and much more.

EPSON reserves the right to make changes in specification at any time and without notice. The information furnished in this document is believed to be accurate and reliable. However, no guarantees are made.
The Power of a True PLC Slave Controller

The RC90 controller combines tremendous power and flexibility that allows it to be used for stand alone, PLC Slave, and PC driven applications. The RC90 controller is able to drive LS-Series SCARA robots with either a PLC master controller or a push button interface panel. All safety circuits and amplifiers are built into the overall form factor of the controller which provides a fully integrated servo system.

Industry Leading Ease of Use

The RC90 controller comes with EPSON’s industry leading RC+ 5.0 development software which provides powerful tools that are easy to use. Features such as the integrated debugger, task manager, macros, smart builds, integrated wizards, syntax assist, dry run and a whole host of setup and configuration dialogs are all included to save robot workcell developers time by simplifying many aspects of their development activities.

Vision Guide 5.0
Vision Guide leads the industry in ease of use for integrated Robot/Vision systems. With a point and click interface, users are constantly amazed with how quickly they get their EPSON Robots running for vision guided robotic applications. With powerful tools such as Geometric Search, Normalized Correlation, Image Analysis, Polar Search, and of course Blob tools and much more, Vision Guide is more than just another vision system. It is an integrated package designed from the ground up to solve vision guided robotic applications.

VB Guide 5.0 (.Net Tools)
EPSON VB Guide has led the robot industry for years in connectivity using Microsoft standards. Starting with DDE, OLE, Active X and now .NET connectivity, we are dedicated to providing solid tools for using Microsoft Visual Basic, .NET, C/C++ or other .NET based solutions to run EPSON Robots. EPSON VB Guide 5.0 provides the power to create sophisticated user interfaces or to connect to 3rd party software/hardware products to make the most out of your EPSON Robot system.

Teach Pendant TP2
The EPSON TP2 (Teach Pendant) allows for easy jogging of the robot and the teaching of points. It has features to allow the editing and saving of point data, program editing, I/O and task monitoring, easy calibration guidance, system history display and much more. It has a backlit liquid-crystal display and is a universal design that allows for left or right handed use. The TP2 is fully IP64 compliant and comes with all UL and RIA safety features such as E-Stop, 3 position deadman switch, single point of control, and slow speed control in Teach Mode to name a few.

Expansion I/O Board
Each expansion I/O board provides 24 inputs and 16 outputs. The number of I/O that can be expanded per RC90 controller is a maximum of 2 boards. When an expansion I/O board is installed, the EPSON RC+ controller software automatically identifies the expansion I/O. No software configuration is needed.

Fieldbus I/O (DeviceNet, Profibus and CC-Link)
The RC90 controller provides powerful fieldbus connectivity using the latest industrial standards. DeviceNet, Profibus and CC-Link are all supported with single card solutions. Because of the open communication standards, users can easily build the fieldbus solution of their choice using off the shelf devices.

RS-232C – Communication Board
The RS-232C option provides a mechanism to communicate with external RS232 devices such as other controllers, scales, or many other devices. A maximum of 2 boards can be installed into an RC90 controller. With 4 ports per expansion board, a maximum of 8 RS-232C ports are available. When the RS-232C board is installed, the EPSON RC+ controller software automatically identifies the RS-232C board. No software configuration is needed.

External Control Point (ECP) Motion
ECP is a powerful motion profile function that allows datums external to the robot’s coordinate system to influence robot motion paths. For example... externally mounting a fixed process dispense unit and allowing the robot to hold a part and maintain path and velocity for the part relative to the fixed dispensing point.
