Specifications

Printing

Printing method On-demand ink jet
Nozzle configuration
  Black: 90 nozzles
  Color: 270 nozzles
  (90 each cartridge: cyan, magenta, yellow)
Print direction Bidirectional with logic seeking

Ink Cartridges

Color Cyan, magenta, yellow, black
Cartridge life 6 months at 77 °F (25 °C) after opening the package
Temperature
  Storage: –4 to 104 °F (–20 to 40 °C)
  1 month at 104 °F (40 °C)
  Freezing*: 3.2 °F (–16 °C)

* Ink thaws and is usable after approximately 3 hours at 77 °F (25 °C).

Caution:
To ensure good results, use genuine Epson ink cartridges and do not refill them. Other products may cause damage to your printer not covered by Epson’s warranty. Do not use an ink cartridge if the date on the package has expired.

Paper

Note:
Since the quality of any particular brand or type of paper may be changed by the manufacturer at any time, Epson cannot guarantee the quality of any non-Epson brand or type of paper. Always test a sample of paper stock before purchasing large quantities or printing large jobs.

Single sheets

Size
  A4 (8.3 × 11.7 inches)
  A5 (5.8 × 8.3 inches)
  A6 (4.1 × 5.8 inches)
  Letter (8.5 × 11 inches)
  Legal (8.5 × 14 inches)
  Half-letter (5.5 × 8.5 inches)
  4 × 6 inches
  5 × 7 inches
  3.5 × 5 inches
  8 × 10 inches
  User Defined up to 8.5 × 44 inches
Paper type Plain bond paper or special paper distributed by Epson
Thickness 0.003 to 0.005 inch (0.08 to 0.13 mm)
Weight 17 lb (64 g/m²) to 24 lb (90 g/m²)
(for plain bond paper)

Envelopes

Size
  No. 10 (4.1 × 9.5 inches)
  DL (4.3 × 8.7 inches)
  C6 (4.5 × 6.4 inches)
  132 × 220 mm
Paper type Plain bond paper
Thickness 0.016 to 0.02 inch (0.40 to 0.52 mm)
Weight 20 lb (75 g/m²) to 24 lb (90 g/m²)

Note:
Poor quality paper may reduce the print quality and cause paper jams or other problems. If you have print quality problems, switch to a higher grade paper.

Do not load curled or folded paper.

Use paper only under these conditions:
  Temperature: 59 to 77 °F (15 to 25 °C)
  Humidity: 40 to 60% RH

Printable Area

Single sheets or cards

* When printing with the borderless feature, print quality may decline in the expanded area. Before printing large jobs using the borderless setting, print a single sheet to confirm printout quality.

Envelopes

A: The minimum top margin is 0.12” (3.0 mm).
B-L: The minimum left margin is 0.12” (3.0 mm).
B-R: The minimum right margin is 0.12” (3.0 mm).
C: The minimum bottom margin is 0.12” (3.0 mm).
D: The minimum bottom margin is 0.78” (20 mm).

Note:
Always load paper into the sheet feeder with the short edge first.
Load envelopes flap edge left with the flap side down.

Media format DCF version 1.0 or 2.0 compliant*
File format JPEG, DOS FAT (FAT 12 or 16, one partition) taken with a DCF version 1.0 or 2.0 compliant digital camera Supports Exif version 2.21
Image size 80 × 80 pixels to 9200 × 9200 pixels
Number of files Up to 999

* DCF is the “Design rule for Camera File system” standard

Loading Paper

Single Sheets
1. Open the paper support and output tray, then slide out the extensions.

2. Flip the feeder guard forward.

3. Slide the left edge guide to the left.

4. Insert the paper, printable side up, against the right edge guide. Always load it short edge first, even for landscape printing. Make sure the paper lies beneath the tabs and the arrow mark on the left edge guide.

You can load up to 100 sheets of plain paper and up to 20 sheets of photo paper. (See page 6 for capacity guidelines on other paper types.)
Note:
The type of paper you choose affects the way your printout looks, so be sure to select the correct paper for your job. If you are just making a copy or printing a rough draft of an image, plain paper is fine. However, for the best results, you’ll want to use one of Epson’s special ink jet papers designed for your printer. For example, your photos will look great printed on Premium Glossy Photo Paper. See “Media” on page 1 for more information.

5. Slide the left edge guide against the left edge of the paper (but not too tightly).

6. Flip the feeder guard back.

7. Make sure the paper thickness lever is set down to the □ L position.

Follow these guidelines when loading paper:
☑ Don’t load paper above the arrow on the left edge guide. Make sure the paper is under the tabs on the left and right edge guides.
☑ Load the printable side face-up. It’s often brighter or whiter than the other side.
☑ Always load the short edge first, even when printing in landscape mode.
☑ Load letterhead or preprinted paper into the printer top edge first.
☑ If you experience paper feeding problems, try loading fewer sheets.
☑ If you’re using special paper, check the package for special loading instructions.

Envelopes

1. Open the paper support and output tray, then slide out the extensions.

2. Flip the feeder guard forward.
3. Slide the left edge guide to the left.

4. Load up to 10 envelopes at a time, flap edge left, printable side up, against the right edge guide.

   ![Image of an envelope being loaded](image)

   **Note:** For best results, press each envelope flat before loading, or load one envelope at a time.

5. Slide the left edge guide against the envelopes (but not too tightly).

6. Flip the feeder guard back.

7. Set the paper thickness lever to the \( \text{H} \) position.

Select the following settings when printing on envelopes:
- **Envelope** as the paper Type or Media Type setting
- The correct envelope size as the Size or Paper Size setting
- **Landscape** as the Orientation setting

### Paper Loading Capacity

When loading Epson ink jet papers, follow these capacity guidelines:

<table>
<thead>
<tr>
<th>Paper type</th>

</table>
Placing Originals for Copying or Scanning

Caution:
Do not place heavy objects on the document table glass and do not press the glass with too much force.

1. Open the document cover and place your original face-down on the glass, in the upper left corner. Move your original about 0.04 inch (1 mm) away from the top and left edges so all of it will be scanned.

2. Close the document cover gently so that your original does not move.

Caution:
Never open the document cover beyond where it stops and do not place heavy objects on top of the Epson Stylus CX all-in-one.

Placing Large or Thick Documents

When you scan a large or thick document, you can remove the document cover. Just open it and pull it straight up.

If you need to press the document flat while you copy or scan it, do not press too hard and be careful not to move it.

Caution:
Do not use excessive force on the document cover, and do not twist it diagonally. You may damage the document cover.

When you are done, replace the document cover by inserting the tabs back into the slots.

Copying

Using the Epson Stylus CX buttons, you can make copies using either letter-size (8.5×11-inch) plain paper, or letter-size, 4×6-inch, or 5×7-inch photo paper.

Copying a Document

1. Make sure the Epson Stylus CX is turned on.
2. Place the document on the glass as described to the left. Be sure to close the document cover.
3. Load up to 100 sheets of letter-size plain paper. (See page 4 if you need instructions.)
4. Press the Copy button until you see the desired number of copies in the Copy window. You can select up to 9 copies at a time this way.
   To make 10 or more copies, see the section to the right.
5. Press the paper type button to select Plain Paper. The light indicates which type is selected.
6. Press the paper size button to select Letter.
7. If you want your copies automatically reduced or enlarged to fit the loaded paper size, press the Fit to Page button.
8. To make a color copy, press the Start Color button.
   To make a black and white copy, press the Start B&W button.
   The On light flashes and after a moment the Epson Stylus CX starts printing.
   If you need to stop copying at any time, just press the Stop button. Do not pull out paper that is being printed; it will be ejected automatically to the output tray.

Note:
The copies may not be exactly the same size as the original.

Copying a Photo
1. Make sure the Epson Stylus CX is turned on.
2. Place the photo on the glass as described on page 7. Be sure to close the document cover.
3. Load up to 20 sheets of letter-size, 4" × 6"-inch, or 5" × 7"-inch paper. (See page 4 if you need instructions.)
4. Press the Copy button until you see the correct number of copies in the Copy window. You can select up to 9 copies at a time this way.
   To make 10 or more copies, see the next section.
5. Press the paper type button to select Photo Paper.
6. Press the paper size button to select Letter, 4" × 6", or 5" × 7".
7. If you want borderless photos (printed without a white border), press the Fit to Page button. Otherwise, photos are printed with a .12-inch (3.0 mm) border.
8. To make a color copy, press the Start Color button.
   To make a black and white copy, press the Start B&W button.
   The On light flashes and after a moment the Epson Stylus CX starts printing.
   If you need to stop copying at any time, just press the Stop button. Do not pull out paper that is being printed; it will be ejected automatically to the output tray.

Note:
The copies may not be exactly the same size as the original.

Making 10 or More Copies
1. Make sure the Epson Stylus CX is turned on.
2. Place the photo on the glass as described on page 7. Be sure to close the document cover.
3. Press the Copy button until you see “–” in the Copy window. This tells the Epson Stylus CX to print up to 100 copies.
4. Load enough paper for the number of copies (up to 100) you want to make. For example, to print 12 copies, load 12 sheets of paper.
5. Press the paper type button to select Plain Paper or Photo Paper.
6. Press the paper size button to select Letter, 4" × 6", or 5" × 7".
7. Press the Start Color or Start B&W button.
   The Epson Stylus CX makes copies until it runs out of paper. Then the red Error light comes on.
8. To make more copies, load more paper and press the Start Color or Start B&W button to resume.
   If you don’t need any more copies, press the Stop button.

Note:
When making a lot of copies, it is a good idea to remove the printed copies from the output tray after every 10 sheets or so.

Speeding Up Printing
If you want to make a copy quickly, you can print a “draft” copy. The print quality is reduced, but the copy prints faster.
1. Load plain, letter-size paper and select Plain Paper and Letter size on the control panel.
2. Press and hold down the Stop button, then press the Start Color button (to copy in color) or the Start B&W button (to copy in black and white). When the On light starts flashing, release both buttons.
   You can return to regular printing after your draft print job finishes.
Printing From a Memory Card  
(Epson Stylus CX4800 Series Only)

Inserting the Card

1. Make sure the Epson Stylus CX4800 Series all-in-one is turned on.

   Note:
   When you print directly from a memory card, it is best if the Epson Stylus CX4800 Series is not connected to your computer (or your computer should be turned off).

2. Open the memory card door.

3. Make sure the memory card access light is off and that no cards are in any of the slots. Then insert your card into the correct slot. The memory card access light flashes and then stays on.

   Insert just one card at a time

   Left slot

   Right slot

   Memory card access light

4. Close the memory card door. Now you can:

   ❑ Print an index sheet so you can select which photos to print (see the next section)
   ❑ Print all the photos on the card (see page 10)
   ❑ Print photos pre-selected on your camera using DPOF (see page 10)

When you want to remove the card, make sure the memory card access light is not flashing, then pull the card straight out of its slot.

Note:
You can print only in color when printing directly from a memory card; you cannot print in black and white.

Caution:
Do not remove the card or turn off the Epson Stylus CX4800 Series while the memory card access light is flashing; you may lose data on the card.

Printing an Index Sheet

1. Make sure your Epson Stylus CX4800 Series is not connected to your computer (or your computer is turned off).

2. Load several sheets of letter-size plain paper. (Use only letter-size paper to print the index sheet.) Up to 30 images are printed on each page, so if there are more than 30 photos on the memory card, you’ll need enough sheets for all the index pages to be printed.

3. Insert the memory card if it is not already in the slot (see the left column).

4. Press the Memory Card button one or more times until the Print Index Sheet light comes on.

5. Make sure Plain Paper and Letter are selected.

6. Press the ◇ Start Color button. The ◇ On light flashes, and the Epson Stylus CX4800 Series starts printing the index sheet(s). (This may take a few minutes.)

¹ Adapter required
² Copy protection function not supported
For multiple index sheets, the pages containing the most recent images are printed first. If you want to cancel printing more sheets, press the Stop button.

Now follow the instructions below to select photos and print.

**Selecting Photos on the Index Sheet**

1. Once you have printed the index sheet, use a dark pen or pencil to fill in one of the ovals beneath each photo you want to print to indicate how many copies you want (1, 2, or 3).

   ![Selecting Photos on the Index Sheet](image)

   Make sure just one oval is filled in for each selected photo and mark the sheet carefully; once it has been scanned you will not be able to change your selections.

   **Note:**
   If you want one copy of all the photos on the index sheet, fill in the ALL oval at the top of the page.

2. Place the index sheet face-down on the glass, in the upper left corner, so that the top of the sheet is aligned against the left edge of the glass.

3. Close the document cover.

4. Load up to 100 sheets of plain paper or up to 20 sheets of photo paper at a time (see page 4 for details). You can load more paper later as necessary to print all your selected photos.

5. Make sure the Print From Index Sheet light is on.

6. Select Plain Paper or Photo Paper (whichever you loaded).

   If you select Plain Paper, the photo(s) print with a white border. If you select Photo Paper, the photos print borderless, to the edge of the paper.

7. Select Letter, 4" x 6", or 5" x 7" for the paper size.

8. Press the Start Color button to start printing.

   **Note:**
   If you need to stop printing, press the Stop button.

9. When you are done printing, remove the memory card by pulling it straight out of its slot.

**Printing All Photos or DPOF Photos**

Follow the steps below to print one copy of each photo on the card or to print only those photos that were pre-selected with your camera's DPOF feature.

1. Insert the memory card (see page 9).

2. Load up to 100 sheets of plain paper or up to 20 sheets of photo paper at a time (see page 4 for details). You can load more paper later as necessary to print all your photos.

3. Press the Memory Card button until the Print All/DPOF/PictBridge light comes on.

   **Note:**
   If the memory card does not contain DPOF information, one copy of all the photos on the card will be printed.

4. Select Plain Paper or Photo Paper (whichever you loaded).

   If you select Plain Paper, the photo(s) print with a white border. If you select Photo Paper, the photos print borderless, to the edge of the paper.

5. Select Letter, 4" x 6", or 5" x 7" for the paper size.

6. Press the Start Color button to start printing.

   **Note:**
   If you need to stop printing, press the Stop button.

7. When you are done printing, remove the memory card by pulling it straight out of its slot.
**Printing From a Digital Camera**

If your camera is PictBridge- or USB DIRECT-PRINT™-compatible, you can print your JPEG photos by connecting your digital camera directly to your Epson Stylus CX4200 Series or Epson Stylus CX4800 Series all-in-one. Your photos must be sized from 80 × 80 pixels to 9200 × 9200 pixels.

1. Make sure your Epson Stylus CX is not printing from a computer.
2. If you’re using the Epson Stylus CX4800 Series, remove any memory cards from slots and press the Memory Card button until the Print All/DPOF/PictBridge light comes on.
3. Load the type of paper you want to use (see page 4). Load enough sheets for the number of photos you’ll be printing.
4. Select Plain Paper or Photo Paper (whichever you loaded). If you select Photo Paper, the photos print borderless, to the edge of the paper.
5. Select Letter, 4”x 6”, or 5”x 7” for the paper size.
6. Connect the USB cable that came with your camera to the USB connector on the front of your Epson Stylus CX.

7. Turn on your camera and select the photos you want to print. Then adjust any necessary settings and print your photos as explained in your camera manual.

**Note:**
If your camera is not supported, a flashing P appears in the Copy window, and the Error light flashes. (On the Epson Stylus CX4800 Series, the Print All/DPOF/PictBridge light also flashes.) Epson cannot guarantee the compatibility of any camera.

Depending on the Epson Stylus CX settings and your digital camera settings, some combinations of paper type, size, and layout may not be supported. In addition, some of your digital camera settings may not be reflected in the printed output.

---

**Scanning**

You can use your Epson Stylus CX all-in-one to scan a photo or document and save it on your computer or other device, or to fax or e-mail it to someone else.

You can even automatically restore faded color photographs as you scan. See page 12 for details.

You can scan from any TWAIN-compliant application—such as ArcSoft PhotoImpression™—using EPSON Scan (see “Scanning From a Program” on page 12). Or you can start EPSON Scan directly from your computer and save your image to a file (see the next section).

The EPSON Scan software provides three scanning modes for progressive levels of control over your scanned image:

- **Full Auto Mode** scans quickly and easily using automatic settings.
- **Home Mode** previews your image and provides automatic image adjustments, cropping tools, and preset options for various types of scans.
- **Professional Mode** previews your image and lets you manually configure your scan settings with a full array of tools.

**Scanning Directly From EPSON Scan**

1. Place your original on the scanner as described on page 7.
2. Do one of the following to start EPSON Scan:
   - **Windows®**: Double-click the EPSON Scan icon on your desktop.
   - **Macintosh®**: Double-click EPSON Scan in the Applications folder.

   You see the EPSON Scan standby window:

   3. If the Mode setting in the upper right corner is set to Full Auto Mode, click the Scan button.
Note:
If you want to automatically restore a color photo as you scan, click the Customize button. See the right column for instructions.

Note:
With Windows XP, do not choose a WIA option for your Epson Stylus CX; it will not work correctly.

Restoring Color While Scanning Photos

Using the Color Restoration feature in EPSON Scan, you can automatically transform an old, faded, or badly exposed photo into one with true-to-life color and sharpness as you scan.

1. Place your original photo on the scanner as described on page 7.
2. Start EPSON Scan. See page 11 for instructions:
3. When the EPSON Scan window appears, do one of the following, depending on the currently selected scan mode:
   - Home or Professional Mode: go to step 4.
   - Full Auto Mode: click the Customize button, click the Color Restoration checkbox, and click OK. Continue with step 9.
4. Select the basic settings for the type of original(s) you are scanning, then select the destination setting for the way you will use your image(s). See the on-screen User’s Guide for instructions.
5. Click the Preview button to preview your image(s), then select your scan area.
6. Do one of the following to select the Color Restoration option:
   - Home Mode: Click the Color Restoration checkbox.
   - Professional Mode: Scroll down to the Adjustments area and click the Color Restoration checkbox.

Scanning From a Program

1. Place your original on the scanner as described on page 7.
2. Start your scanning program.
   Double-click the program icon from your desktop, if it is available, or do one of the following:
   - Windows: Select Start > All Programs or Programs > program folder > program icon.
   - Mac OS® X: Open the Applications folder, select the program folder, and click the program icon.
3. Select your program’s scanning option. (See your scanning program help for instructions.)
   For example, in ArcSoft PhotoImpression, open the File menu and select Get Photo. Then click the Camera/Scanner icon.
   Note:
   In some programs, you must select the Epson Stylus CX as the “source” first. If you see a Select Source option, choose it and select your Epson Stylus CX there first.
4. Select your Epson Stylus CX all-in-one, EPSON Scan starts automatically.
7. Make any other necessary image adjustments.
8. Size your image as necessary.
9. Click the Scan button to scan and restore the color in your image(s).

What happens next depends on how you started EPSON Scan. See the on-screen User’s Guide for details.

**Checking the Print Head Nozzles and Ink Levels**

If your printouts are faint or have gaps in them, some of the nozzles in the print head may be clogged or ink may be running low in one or more of the ink cartridges. Follow the steps below to check the print head nozzles and remaining ink levels using the control panel.

1. Turn off the Epson Stylus CX.
2. Load letter-size paper in the sheet feeder.
3. Press the Ink and On buttons together and hold them down for about 3 seconds. The Epson Stylus CX turns on and prints a test pattern. It also shows the percentage of ink left in each cartridge:

   | Print head does not need to be cleaned yet: |
   | ![Pattern](image1.png) |
   | Print head needs to be cleaned: |
   | ![Pattern](image2.png) |

   If the pattern does not look good, try cleaning the print head as described below.

**Note:**
You can also check the ink level using Status Monitor 3; see the on-screen User’s Guide.

**Cleaning the Print Head**

If your printouts are unexpectedly light or faint, or you notice light or dark bands across your printout, you may need to clean the print head. This unclogs the nozzles so they can deliver ink properly. Run a nozzle check (as described above) to see if the print head needs cleaning.

**Note:**
Print head cleaning uses ink, so clean it only if quality declines and the nozzle check indicates that the print head needs to be cleaned.

If the red ink light comes on or flashes, you cannot clean the print head. In this case, replace the appropriate ink cartridge first; see the next section.

1. Make sure the Epson Stylus CX is on and the ink light is off.
2. Hold down the ink button for 3 seconds until the On light starts flashing. The Epson Stylus CX runs a head cleaning cycle and the On light flashes.

**Caution:**
Never turn off the Epson Stylus CX while head cleaning is in progress. You may damage it.

3. When the On light stops flashing, run a nozzle check (as described to the left) to verify that the print head is clean.
4. If there are still gaps or lines, or the test patterns are faint, run another cleaning cycle and check the nozzles again.

**Note:**
If you don’t see any improvement after cleaning the print head four or five times, turn off the Epson Stylus CX and wait overnight. This lets any dried ink soften. Then try cleaning the print head again. If quality still does not improve, one of the ink cartridges may be old or damaged and needs to be replaced; see the next section.

**Tip:**
If you do not use your Epson Stylus CX often, it is a good idea to print a few pages at least once a month to maintain good print quality.

**Replacing Ink Cartridges**

- When the red ink light flashes, one or more ink cartridges are low on ink.
- When the red ink light stays on, you need to replace the cartridge(s).

You’ll also see a message on your screen when you print telling you which cartridge is low or empty. (You cannot print when a cartridge is empty.)

When a cartridge is more than six months old, you may need to replace it if printouts don’t look their best. If the quality doesn’t improve after cleaning and aligning the print head, you can replace the cartridge even if the red ink light is off.
Checking the Ink Supply

To check your ink supply, do the following:

Windows: Double-click the icon on your taskbar (in the lower right corner of your screen). You see a window like the following:

Macintosh OS X: Open the Applications folder and select EPSON Printer Utility. Select your Epson Stylus CX in the printer list, click OK, and select EPSON StatusMonitor.

You see a window like this:

Removing and Installing Ink Cartridges

Be sure you have a new ink cartridge before you begin. Once you start replacing a cartridge, you must complete all the steps in one session.

Warning:
Keep ink cartridges out of the reach of children.

Be careful when you handle used ink cartridges; there may be ink remaining around the ink supply port. If ink gets on your skin, wash it off with soap and water. If it gets in your eyes, flush them immediately with water.
Caution:
Do not move the print head by hand; this may damage the Epson Stylus CX. Always press the ink button to move it.

4. Press the ink button again.
   - If more than one cartridge is empty or low, the next cartridge moves to the ink out mark.
   - Once the Epson Stylus CX has identified all of the empty or low ink cartridges, the print head moves to the ink cartridge replacement position.

5. Open the cartridge cover.

6. Squeeze the tab at the back of the cartridge and lift it straight out. Dispose of it carefully. Do not take the used cartridge apart or try to refill it.

Caution:
Do not touch the green chip on the front of the cartridge. This can damage the ink cartridge.

7. Before you open the new ink cartridge package, shake it four or five times. Then remove it from the package.

8. Place the new ink cartridge into the cartridge holder and push it down until it clicks into place.

9. Replace any other cartridges that need to be replaced.

10. Close the ink cartridge cover and press it until it clicks into place.

Warning:
If ink gets on your hands, wash them thoroughly with soap and water. If ink gets into your eyes, flush them immediately with water.
11. Close the scanner.

12. Press the \( \text{\shortmid} \) ink button. The Epson Stylus CX begins charging ink and the \( \text{\textbullet} \) On light starts flashing. This takes about one minute. When it’s finished, the \( \text{\textbullet} \) On light stops flashing and remains on, and the \( \text{\shortmid} \) ink light goes out.

Caution:
Never turn off the Epson Stylus CX while the \( \text{\textbullet} \) On light is flashing or you’ll waste ink.

Note:
If the \( \text{\shortmid} \) ink light stays on (not flashing), the ink cartridge may not be installed correctly. Press the \( \text{\shortmid} \) ink button again and reinstall the ink cartridge until it clicks into place.

Aligning the Print Head

If your printouts look grainy or blurry, or you see light or dark horizontal banding, you may need to align the print head.

Note:
Banding may also occur if your cartridges are low on ink or you need to clean the print head.

1. Turn on the Epson Stylus CX all-in-one.
2. Load several sheets of paper.

3. Windows: Right-click the printer icon on your taskbar (in the lower right corner of your screen). Select Print Head Alignment.

Macintosh OS X: Open the Applications folder and select EPSON Print Utility. Select your Epson Stylus CX in the printer list, click OK, and select Print Head Alignment.

4. Follow the instructions on the screen to print a vertical alignment sheet. You see a window like this one:

5. Look at the four sets of patterns in your printout. For each set, if you see a pattern with no visible vertical lines, enter its number in the corresponding box on the screen and click Next.

If you can’t find an aligned pattern, choose the one that’s closest to being aligned. Click Realignment and then Print to print another alignment sheet and repeat this step.

6. Click Print to print a black horizontal alignment sheet. After it’s printed, you see a window like this one:

7. Look at the printout and select the pattern with no gap or line between the rectangles. Enter the number for that pattern in the box on the screen and click Next.
If you can’t find an aligned pattern, choose the one that looks the best. Then click **Realignment** to print another alignment sheet and repeat this step.

8. Click **Print** to print a color horizontal alignment sheet. After it’s printed, you see a window like this one:

9. Look at the printout and find the pattern with no gap or line between the rectangles and enter its number in the box on the screen.

   If you can’t find an aligned pattern, choose the one that looks the best. Then click **Realignment** to print another alignment sheet and repeat this step.

10. Click **Finish** to close the Print Head Alignment Utility.

### Transporting the Epson Stylus CX

If you need to ship your Epson Stylus CX all-in-one, you must prepare it for transportation by packing it in its original box or one of a similar size.

1. Turn off the Epson Stylus CX.
2. Remove any paper from the sheet feeder and close the paper support.
3. Unplug the power cord from the electrical outlet. Then disconnect the USB cable from the Epson Stylus CX.
4. Open the scanner section and make sure the ink cartridge holder is in the home position on the right.
5. Secure the ink cartridge holder (print head) to the case with tape.
6. Close the scanner section, push in the output tray extension, and close the output tray.
7. Repack the Epson Stylus CX in the original box using the protective materials that came with it.

Keep the Epson Stylus CX level as you transport it. After transporting the Epson Stylus CX, remove the tape securing the print head, plug in the Epson Stylus CX, and turn it on. If you notice a decline in print quality, clean the print head (see page 13); if output is misaligned, align the print head (see page 16).
