About EasyMP Network Projection

This chapter describes useful functions for EasyMP Network Projection and how to install the software.
Functions of EasyMP Network Projection

You can use EasyMP Network Projection to project your computer screen from the projector via a network. Sharing the projector over the network allows you to project data from different computers without changing the signal cable. Even if the projector is away from the computer, you can still project data via a network.

Various Screen Transfer Functions

You can use the following screen transfer functions.

- Multi-screen display
  "Using Multi-Screen Display" p.29
  You can use up to four projectors to project a different image from one computer. This allows you to project data such as a report on a landscape screen.

- Movie Sending Mode (supported models only)
  "Projecting Movies on a Computer (Movie Sending Mode)" p.27
  You can send movie files directly to a projector which allows the movies to play smoothly.

- Presentation Mode
  "Projecting Only a PowerPoint Slide Show (Presentation Mode)" p.26
  By using Presentation Mode, you can project only the PowerPoint Slide Show running on your computer. A black screen is projected when the Slide Show is not playing. You can start presentations smoothly without projecting unnecessary images.
Functions of EasyMP Network Projection

• Distribution function
  The screen being displayed by a computer can be simultaneously displayed by up to four projectors on the same network.
  You cannot connect multiple computers to one projector simultaneously.
Installing the Software

You can find EasyMP Network Projection on the EPSON Projector Software CD-ROM. Install the software on the computer you are using.

Software Requirements

EasyMP Network Projection runs on computers that meet the following requirements.

<table>

* Except for Windows XP without any service packs installed, and Windows XP Service Pack 1.
Installing the Software

For Mac OS X

| OS                | Mac OS X 10.4.x 32-bit  
|                   | Mac OS X 10.5.1 or later* 32-bit  
|                   | Mac OS X 10.6.x 32/64-bit  
|                   | Mac OS X 10.7.x 32/64-bit  
|                   | Recommended: Mac OS X 10.4.11/10.5.8/10.6.6/10.7.0  
| CPU               | PowerPC G3 900 MHz or faster  
|                   | Recommended: CoreDuo 1.83 GHz or faster  
| Amount of Memory  | 256 MB or more  
|                   | Recommended: 512MB or more  
| Hard Disk Space   | 20MB or more  
| Display           | Resolution of no less than XGA (1024x768) and no higher than WUXGA (1920x1200).  
|                   | Display color of 16-bit color or greater (approx. 32000 display colors)  

* Operation is not guaranteed in Mac OS X 10.5.0 because the Firewall settings are not set correctly when the version is updated.

Installing

Make sure you check the following points before starting installation.

- Close all running applications before starting installation.
- When the language selected for the installation varies from that of the OS being used, the screens may not be displayed correctly.

For EMP NS Connection users

The name of the software has changed.

Before change: EMP NS Connection  
After change: EasyMP Network Projection

When using the same function as EMP NS Connection on the projector, install EasyMP Network Projection after uninstalling EMP NS Connection. Depending on the model, you may not be able to connect to the projector correctly using EMP NS Connection.

For Windows

You need administrator authority to install EasyMP Network Projection.

1. **Turn on your computer.**
2. **Insert the EPSON Projector Software CD-ROM into the computer.**  
   The installer starts automatically.
   If the installer does not start automatically, open the CD-ROM drive from My Computer (or Computer), and then double-click InstallNavi.exe or EMP_NSCInst.exe.
3. **Follow the on-screen instructions to install.**
   For Mac OS X
   1. **Turn on your computer.**
Installing the Software

2 Insert the EPSON Projector Software CD-ROM into the computer.

3 Double-click the EMP_NPInstaller.mpkg icon in the EPSON window.
   Installation starts.

4 Follow the on-screen instructions to install.
   You can download the latest version of EasyMP Network Projection from www.epson.com and select your location.
Connecting the Computer and Projector

This chapter explains how to connect the computer and the projector via a network, and the procedure for projecting images from your computer’s screen with the projector.
Two Connection Modes

There are two methods of connecting a computer and the projector via a network by using EasyMP Network Projection.

- Depending on the projector model, either wired LAN connection or wireless LAN connection may not be available.
- To use the wireless LAN connection, you need the Wireless LAN unit for the projector.
  If the Wireless LAN unit is not supplied with your projector, please purchase the optional accessory. See your projector User’s Guide for details on optional accessories.

Quick Connection Mode

Quick Connection Mode is only available when you install the Wireless LAN unit in the projector.

In Quick Connection Mode, you can connect the projector and the computer directly using wireless communication. This allows you to project the computer screen without making any complicated network settings.

Advanced Connection Mode

Advanced Connection Mode connects to an existing network system.

In Advanced Connection Mode, you can connect the projector and the computer via a LAN access point.

When connecting to a network via Wired LAN, connect the projector to the network hub with a commercially available LAN cable.
Preparing to Connect

Follow the steps below to connect the computer and the projector via a network using EasyMP Network Projection.

1. **Install EasyMP Network Projection on the computer to be connected.**
   - "Installing" p.8

2. **Make network settings on the computer and put it into network connection status.**
   - See the documentation supplied with your computer, LAN adapter, or AirPort card for details on network settings.

   When the computer you are using is normally connected to the network, you do not need to make network settings on the computer.

3. **For Quick Connection Mode**
   - Install the Wireless LAN unit to the projector.

4. **Press the LAN button on the remote control.**
   - The LAN standby screen is displayed.
   - If there is no signal for the current input source, it automatically switches to the LAN source. If it does not automatically switch to the LAN source, press the LAN button.

   ![LAN standby screen]

5. **Start EasyMP Network Projection on the computer and connect with the projector.**
   - "Connecting to a Projector on a Network and Projecting" p.13

   If a connection error occurs, a number indicating the type of error is displayed as follows.
   - Event ID: 04xx
   - See your projector User's Guide for details on Event ID.

   ![Event ID display]

For Advanced Connection Mode

- Make network settings on the projector and put it into network connection status.
- You can make network settings from the projector’s Network menu.
Operating the Computer

In the following explanations, unless otherwise noted, Windows screen shots are used. Similar screens are displayed on Mac OS X.

1. **Start EasyMP Network Projection.**
   - For Windows
     Click **Start**, select **Programs** (or **All Programs**), **EPSON Projector**, **EasyMP Network Projection**, and then click **EasyMP Network Projection V2.XX**.
   - For Mac OS
     Double-click **EasyMP Network Projection** from the **Applications** folder.

2. **Select Quick Connection Mode or Advanced Connection Mode, and then click OK.**
   - **”Two Connection Modes” p.11**
   The projector search results are displayed. To always connect using the selected connection mode, select **Set the selected Connection Mode as the default mode for future connections**.

3. **Select the projector you want to connect to, and then click Connect.**
   - If the projector you want to connect to is not displayed in the search results, click the **Automatic search** button. The search takes about 30 seconds.
   See the following section for details on the connection screen.
   - **”Using the Connection Screen” p.15**

4. **When Projector Keyword is set to On from the projector, the keyword entry screen is displayed. Enter the keyword displayed on the LAN standby screen, and then click OK.**
   When the connection is complete, the computer screen is projected. The following EasyMP Network Projection toolbar is displayed on the computer screen. You can use this toolbar to operate the projector and make settings, and to disconnect the network connection. See the following section for details on the toolbar.
   - **”Using the Toolbar” p.17**

Security dialog displayed when connecting

In Quick Connection Mode, the following dialog box may be displayed when connecting to a projector with security settings enabled.

For Windows Vista/Windows 7
• Enter the passphrase set on the projector. If you select **Save the passphrase and don't show this dialog box again** the projector's SSID and passphrase are saved on the computer and this dialog box is not displayed the next time you connect. You do not have to enter the passphrase again.

• The following dialog box is displayed if the projector's passphrase has not been changed from the default. Change the passphrase from the projector's **Network** menu.

For **Windows 2000/XP**

You cannot connect to a projector with security settings enabled. Set **Security** to **Off** in the projector's Configuration menu.
Using the Connection Screen

Start EasyMP Network Projection to display the following screen. The operation of each button or item is described in the following table.

When the system starts in Quick Connection Mode.

- **1.** Status
- **2.** Projector name
- **3.** SSID
- **4.** Signal intensity
- **5.** Update list
- **6.** Save in profile
- **7.** Clear list
- **8.** Troubleshooting
- **9.** Connect
- **10.** Disable interrupt connection
- **11.** Use multi-display
- **12.** Set options
- **13.** Profile
- **14.** Automatic search
- **15.** Manual search

**Automatic search**

In Quick Connection Mode, you can search for the projectors based on the SSID.

In Advanced Connection Mode, you can search for available projectors on the network system to which the computer is connected.
Connecting to a Projector on a Network and Projecting

2 Manual search
In Quick Connection Mode, you can search for the projector based on the SSID selected from a list.
In Advanced Connection Mode, you can search for a projector based on a specified IP address or projector name.

3 Status
The following six icons indicate the status of the detected projectors.
- Standby: Available.
- Busy: Available. When you click Connect, the computer currently connected is disconnected and your computer is connected.
- Busy (Disable interrupt connection): Cannot be selected. Disable interrupt connection is set on another computer which is already connected.
- Currently in use by another application: The projector’s Configuration menu is open. You can select it after closing the Configuration menu and running the search again.
- Searching: Displayed while running Manual search or Profile.
- Not found: Displayed when a projector cannot be found as a result of Manual search or Profile.
- Not acquired: Available. Displayed when a projector with security settings enabled is found in Quick Connection Mode.

4 Projector name
The projector’s name is displayed.

5 Update list (Quick Connection Mode only)
Updates Status and Signal intensity.

6 Disable interrupt connection
Select this to prevent an interrupt connection by other computers while connected to the selected projector.

7 Use multi-display
Select this when using the Multi-screen display function. When this is selected, Display layout and Display properties are displayed at the bottom of the screen.

8 Troubleshooting
If there is a problem and you cannot have a connection, press this button to open the EasyMP Network Projection Troubleshooting screen.

9 Connect
Connect to the projector you selected from the search results list. When a connection is made with a projector, a toolbar is displayed.

10 Set options
You can make option settings such as the processing method when EasyMP Network Projection starts.

11 Save in the profile
Saves the results of a network projector search as a profile.

12 Clear list
Deletes all search results.

13 SSID (Quick Connection Mode only)
The projector’s SSID is displayed.

14 Signal intensity (Quick Connection Mode only)
As the Signal intensity increases, so does the number of lit indicators.
Connecting to a Projector on a Network and Projecting

Using the Toolbar

The toolbar is displayed on the computer screen after EasyMP Network Projection starts and a connection is made with the projector. You can use this toolbar to operate and make settings for the projector.

Profile
You can search for a projector on the network using a profile saved using Save in the profile.

IP address (Advanced Connection Mode only)
The projector’s IP address is displayed.

Display
Select the display number (when Use multi-display is selected).

Select target projector
Click to limit the projector operated from the toolbar when projecting from multiple projectors using the distribution function or Multi-screen display. The indication below the icon shows the projectors that can be controlled.
ALL indicates that all of the connected projectors can be controlled.
For example, when “1, 3” is displayed, projectors No. 1 and No. 3 can be controlled.
Click to display the following screen.

Select the projector to be controlled.
Indicates the No. of an allocated projector. This No. appears under the icon to indicate the No. of the projector that you can control from the toolbar.

Indicates the status of the projector.

Stop
Stops projection while connected to the projector. A black screen is projected while stopped.

Show
Releases Stop or Pause.

Pause
Pauses projected images while connecting to the projector.

Presentation Mode
Each time this is clicked, Presentation Mode switches between enabled/disabled.

"Projecting Only a PowerPoint Slide Show (Presentation Mode)" p.26

Projector control
While the projector is connected to the network, the projector's A/V Mute, Switch PC source and Switch video source functions can be controlled from both the remote control and the projector's control panel.

Click to display the following toolbar.

4 A/V Mute
Turns the video and audio on or off.

5 Switch PC source
Changes to images from the port where the signal is being input.

6 Switch video source
Changes to images from the video input port.
**Screen Preview**
Displays the multi-screen preview screen.
Click to display a preview with the settings you have made. Click each display to enlarge each Screen Preview to full-screen.

**Set options**
Transmission performance during the transfer of computer images can be adjusted.
“Set options” p.39

**Movie Sending Mode**
Used to immediately play back a movie file. If the projector cannot play back movies, the message “The connected projectors do not support Movie Sending” is displayed.
“Playing Movies” p.27

**Disconnect**
Disconnects the connection to the projector.

**Signal intensity** (Quick Connection Mode only)
This is displayed when the connection is made in Quick Connection Mode. As the Signal intensity increases, so does the number of lit indicators.
You can connect the projector and the computer and project to screens at remote locations (on different subnets).

In Automatic search, projectors on different subnets are not found because searches are only performed on the same subnet.

You can use the following methods to connect to a projector on a different subnet.

- **Specify either an IP address or projector name and perform a search.**
  
  The IP address can be input directly. Also, provided the projector name to be connected has been registered on the DNS server, you can perform a search simply by inputting that projector name.

  - "Specifying Either an IP Address or Projector Name and Performing a Search (Advanced Connection Mode Only)" p.20

- **Perform a search based on a Profile.**
  
  Once you have performed a search for a projector on a different subnet by specifying either an IP address or a projector name, you can save the search as a profile with an easy-to-remember name, and then use that profile whenever you subsequently want to search for a projector on a different subnet.

  - "Performing a Search with a Profile" p.21

- **If you cannot find a projector, see the following section for the most likely causes.**

  - "Troubleshooting" p.46

- **When you use Manual search in Quick Connection Mode, you can specify the SSID. When there are a lot of projectors you can narrow the search field by using SSID.**

In the following explanations, unless otherwise noted, Windows screen shots are used. Similar screens are displayed on Mac OS X.

1. **Click Manual search on the EasyMP Network Projection projector selection screen.**
2 Enter the IP address or the projector name for the projector you want to connect to, and click OK.

The search results are displayed on the EasyMP Network Projection projector selection screen. Provided the target projector has been identified, select that projector, and then click Connect to establish a connection. Once you have saved projector information as a profile, you do not have to specify the relevant details every time you perform a search. "Making a Profile" p.21

Performing a Search with a Profile

You can save a search for a frequently used projector as a profile. A profile is a file containing all of the information pertaining to a given projector, such as the projector name, its IP address, and SSID. You can specify a profile to search for a projector instead of specifying relevant details such as the IP address and projector name. For example, by creating a group of profiles for each place where a projector is setup and managing them with folders, the target projector can be found quickly. This section explains how to create, edit, and manage a profile.

Making a Profile

Profiles are made by saving search results. For details on how to edit a previously saved profile, see the following section.

"Managing a Profile" p.23

1 While the projector is displayed on the EasyMP Network Projection projector selection screen, click Save in the profile.

The Save in the profile screen is displayed.
Enter a Profile name, and then click Add.

Projector information is registered in the profile.
To save a profile with a different name, select **Save as**. If you have created a folder for profiles, one of the following screens is displayed. After entering the Profile name and selecting the **Save in** destination, click **Add**.

For **Windows**

For **Mac OS X**

For details on how to create a folder for profiles, see the following section.

"Managing a Profile" p.23

**Searching by specifying a Profile**

You can search by specifying the profile you created.
Connecting to a Projector on a Different Subnet

1. **Click Profile on the EasyMP Network Projection projector selection screen.**
   If no profile is registered, you cannot select Profile.

2. **From the menu that is displayed, select the projector you want to connect to.**
   The search results are displayed on the EasyMP Network Projection projector selection screen.
   Provided the target projector has been identified, select that projector, and then click Connect to establish a connection.

Managing a Profile

You can change the name and the hierarchical structure of the profile.

1. **Click Set options on the EasyMP Network Projection main screen.**
   The Set options screen is displayed.

2. **Click Edit profile.**
   The Edit profile screen is displayed.
3. Edit the contents registered in the profile.

<table>
<thead>
<tr>
<th>Item</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profile</td>
<td>You can display the registered profile. You can manage it by creating a folder.</td>
</tr>

</tr>
</tbody>
</table>

4. Click OK.

Saves your edits and closes the Edit profile screen.
Various Projection Styles

This chapter explains the functions that may be useful in a meeting or presentation, such as the Multi-Screen Display which allows you to send images to multiple projectors from a single computer.
Projecting Only a PowerPoint Slide Show (Presentation Mode)

By using Presentation Mode, you can project only the PowerPoint Slide Show running on your computer. A black screen is projected when the Slide Show is not playing. You can start presentations smoothly without projecting unnecessary images.

In addition to PowerPoint, Keynote is compatible with Presentation Mode for Mac OS X.

To set Presentation Mode to On or Off, click the button.

“Using the Toolbar” p.17
You can send movie files to the projector using Movie Sending Mode. This allows movies to be played more smoothly than by projecting them played with other applications on a computer.

You can also select multiple files and play them repeatedly from first to last.

However, some projectors may not support movie files.

- You can use Movie Sending Mode to send a movie to a single projector.
  Sending a movie to multiple projectors simultaneously is not possible with Movie Sending Mode.
- The image and sound may skip or stop depending on the communication method and electromagnetic wave conditions.

**Supported Files**

The following table indicates the specifications for files supported by Movie Sending Mode.

<table>
<thead>
<tr>
<th>File Type (Extension)</th>
<th>Movie Codec</th>
<th>Audio Codec</th>
<th>Recording Quality</th>
</tr>
</thead>
<tbody>
<tr>
<td>.mpg, .mpeg</td>
<td>MPEG-2</td>
<td>MPEG-1 Layer 1/2</td>
<td>Maximum frame rate: 30 fps</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Maximum resolution: 1280x720</td>
</tr>
<tr>
<td>.mp4</td>
<td>MPEG-4 ASP</td>
<td>MPEG-4</td>
<td></td>
</tr>
<tr>

<td>AAC-LC</td>
<td></td>
</tr>
<tr>
<td>.wmv, .asf</td>
<td>WMV9</td>
<td>WMA</td>
<td></td>
</tr>
</tbody>
</table>

You cannot project files protected by digital rights management (DRM).

**Playing Movies**

1. **Click the button on the toolbar.**
   The projector selection screen is displayed.

2. **Select the projector, and then click OK.**
   The Movie Sending Mode screen is displayed.

3. **Click Select file.**
4. Select a movie file to play, and then click Open.

The Movie Sending Mode screen is displayed again. The selected file is displayed in the Movie file list.
If you click Select file, the Movie file list is updated with items you select later.

5. Play and stop the movie file on the Movie Sending Mode screen.

Position indicator
Starts playing the file from the point at which it is dragged and dropped.

Play
Plays the file.

Pause
Pauses playback.

Stop
Stops playback.

Back
Plays the current file from the beginning.

Next
Plays the next file from the beginning.

Repeat
Plays repeatedly from the first file in the list. You cannot repeat one specific file when there are multiple files in the list.

6. Click Close to exit Movie Sending Mode.
Using Multi-Screen Display

Multi-screen display mode allows you to project different images from multiple projectors that are connected to a single computer. With Windows, multiple virtual display drivers can be set in the computer, and each image can be projected by the projector. This function is not available with Windows Vista and Windows 7. For Mac OS X, an external monitor needs to be connected to the computer to enable this function. While the following explanation refers to virtual display, for Mac OS X the operation relates to the screens displayed on the physically connected monitor.

Example of Adjusting the Virtual Display

By arranging the virtual display allocation, you can project only the image that you want to show or project different images from left to right in a presentation.

Arrangement example 1

1. Actual monitor image
2. Image of virtual display

PowerPoint file
Excel file
Using Multi-Screen Display

Arrangement example 2

Procedure Before Using the Multi-screen Display Function

1. **Set the virtual display.**
   - "Setting the Virtual Display" p.30
   In a Windows environment, enable the virtual display driver as necessary. Also, for both Windows and Mac OS, set up the virtual display arrangement.

2. **Allocate the image to be projected.**
   - "Allocating the Image to be Projected" p.36
   Open the file to be projected, and then move the screen to the virtual display according to the actual projection arrangement.

3. **Project the allocated images.**
   - "Projecting the Allocated Images" p.36
   Allocate a virtual display number to a projector, and then start projection.

Setting the Virtual Display

This section explains the virtual display for arrangement example 1.
- "Example of Adjusting the Virtual Display" p.29

Enable the virtual display driver (Windows only)

Enable the virtual display driver. If you have already enabled the virtual display while installing EasyMP Network Projection, this operation is not necessary. Go to the following section.
Adjusting the Virtual Display

After starting EasyMP Network Projection, the procedure for setting up the virtual displays differs for Windows and Mac OS X. The procedures are explained separately below.

Check the following points before starting EasyMP Network Projection when connecting via Wireless LAN. If the following points are not set correctly, Multi-screen display cannot be used.

- The SSID for the computer and each projector must be the same. (For Quick Connection Mode)
- The wireless LAN system for the computer and each projector must be the same.

You can modify the SSID and wireless LAN system for the projector from the projector’s Network menu. See your projector User’s Guide for details.

For Windows

1. Click Start, select Programs (or All Programs), EPSON Projector, EasyMP Network Projection, and then click EasyMP Network Projection V2.XX to start EasyMP Network Projection.

2. Select Quick Connection Mode or Advanced Connection Mode, and then click OK.
Select the Use multi-display check box.

Click Display properties.

The Display Properties screen is displayed.

Display layout and Display properties are added at the bottom of the screen.
5 Click the Settings tab.

Drag the displayed monitor icon and place it where desired. Here, the actual monitor (1) is placed on the left, while the virtual monitor (3) is placed on the right. When the PC has multiple display output terminals, the numbers assigned to the virtual terminals will be sequential to those of the physical terminals.

- When an external monitor is connected as a secondary monitor, the image for that screen cannot be projected.
- Depending on the hardware, the number of the secondary monitor may be other than “2”. When placing the monitor icons, click the icon to check that the display monitor type is not the secondary monitor.
• For the Screen Resolution settings, see the following.
  ➜ "Supported Resolutions" p.44
When the monitor icon is arranged, a virtual display is connected as the image like below.

7 Click OK to close the Display Properties screen.
Allocate the projecting images next.
  ➜ " Allocating the Image to be Projected" p.36

For Mac OS X

1 Double-click EasyMP Network Projection from the Applications folder to start EasyMP Network Projection.

2 Select Quick Connection Mode or Advanced Connection Mode, and then click OK.

3 Select the Use multi-display check box.
Display layout and Display preferences are added at the bottom of the screen.
4. Click Display preferences.

The display setting screen is displayed.

5. Click Arrangement.

6. Clear the Mirror Displays check box.
Using Multi-Screen Display

Drag the displayed monitor icon and place it where desired.

Drag the window to the desired virtual display monitor, and allocate it where the image is to be projected.

Close the display setting screen.
Allocate the projecting images next.

Open the file to be projected.
Open the PowerPoint and Excel files.

Projecting the Allocated Images

This section explains the virtual display for arrangement example 1.
"Example of Adjusting the Virtual Display" p.29

Select the number of the virtual display to allocate on the Display, and set which image to be projected from which projector.

Allocating the Image to be Projected

This section explains the virtual display for arrangement example 1.
"Allocating the Image to be Projected" p.36
Using Multi-Screen Display

2 Click Connect.

In a Windows environment, you cannot view the image being sent to a virtual display on the computer. To adjust the image on the virtual display, you must do so while viewing the projected image. To perform mouse-based operations on the virtual display, move the mouse pointer in the direction of the virtual display so that the pointer appears on the virtual display.

3 To end projection for multi-screen display, click Disconnect on the toolbar.

In a Windows environment, if the virtual display driver has been enabled so that the mouse pointer can be moved outside the limits of the screen, there may be occasions when you lose track of the location of the pointer. If you are not using a virtual display, clear the virtual display checkbox on the Add-Remove EPSON Virtual Display screen so that the mouse pointer moves back inside the screen's display area. To subsequently use multi-display again, place a check mark against the required display under Add-Remove EPSON Virtual Display. To clear a check mark, see the following.

"Enable the virtual display driver (Windows only)" p.30
Appendix
Set options

You can make option settings such as the processing method when EasyMP Network Projection starts.
Access Set options from the main screen of EasyMP Network Projection.

1. **Click Set options on the EasyMP Network Projection main screen.**

The Set options screen is displayed.

2. **Set each of the items.**

Confirm the details of the set items in the following sections. When you have made all the necessary settings, click **OK** to close the Set options screen.

You can also access Set options by clicking [ ] on the toolbar. When you access Set options from toolbar, the General settings tab is not displayed.

### General settings tab

#### Use full-screen video transfer
- **Windows XP only:** Plays back a movie file at full screen. If the projector does not support movie sending, this function cannot be set.

#### Encrypt communications
- Select to encrypt and transmit data. Even if data is intercepted, it cannot be decrypted.
- When using Quick Connection Mode, make sure you always select this checkbox.
### Set options

<table>
<thead>
<tr>
<th><strong>Display Connection Mode Selection window on startup</strong></th>
<th>Set whether or not the Quick Connection Mode/Advanced Connection Mode screen is displayed when EasyMP Network Projection starts. Clear this checkbox once you have settled on a regular startup method.</th>
</tr>
</thead>
</table>
| **Make the movement of the mouse pointer smooth**      | Windows only  
Select to prevent the mouse pointer from flickering when **Transfer layered window** is selected in **Adjust performance**. (When Windows Aero is selected as the theme in Windows Vista/7, Windows Aero turns off by selecting this setting.) |
| **Use Interactive Pen**                                | Select this to use the interactive function over a network. You do not need to connect a computer to the projector with a USB cable (supported models only). You can use only one Easy Interactive Pen at a time. |
| **Search method on startup**                           | Select from the following projector search methods executed when EasyMP Network Projection is started.  
- **Automatic search on startup**  
- **Specify search method after startup**  
- **Search with the last network configuration** |
| **Wireless LAN passphrase setting files**              | Not available for Windows 2000/XP. In Quick Connection Mode, SSIDs and passphrases are stored on the computer when connecting to a projector with security settings enabled. You can edit and delete the stored information.  
**Edit**: Displays the wireless network management screen for the computer.  
**Delete all**: Deletes all the SSIDs and passphrases stored on the computer. |
| **Edit profile**                                       | The Edit profile dialog box is displayed.  
➔ "Managing a Profile" p.23 |
| **Switch LAN**                                         | Windows only  
This is used when it is necessary to switch the network adapter to be used for a search when a computer has multiple adapters.  
By default, all of the network adapters are used to perform a search. |
| **Restore Defaults**                                   | You can reset all adjustment values for **Set options** to their default settings. However, you can retain settings for **Edit profile** and **Switch LAN** in **General settings**. |
Adjust performance tab

The performance can be set to **Fast**, **Normal**, and **Fine**.
Set to **Fast** when movie projections are interrupted.

- **Lower the resolution and transfer**
  - Only available for projectors with a resolution of WUXGA (1920x1200).
  - Select to reduce the size of the data to be transferred to the projector by lowering the resolution. Use this option on a slow network or when displaying the image takes too long or is interrupted.

**Transfer layered window**
Windows only (excluding Windows Vista and Windows 7)
The layered window is in use when contents such as messages displayed on the computer are not projected by the projector. Select this checkbox to project contents such as messages that use the layered window.
If the mouse pointer flickers on the screen, select **Make the movement of the mouse pointer smooth** in **General settings**.

**Disable Windows Aero and improve the tracking of the interactive pen**
Only available when Windows Aero is selected as the theme.
Select to improve the tracking delay for the interactive pen. Windows Aero is disabled and interactive pen operations become smoother.

**Restore Defaults**
You can reset all adjustment values for **Set options** to their default settings. However, you can retain settings for **Edit profile** and **Switch LAN** in **General settings**.
### Audio Output tab

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Output audio from the projector</td>
<td>Select when you want to output the computer’s audio from the projector. Clear to output audio from the computer. However, when playing movies with audio in Movie Sending Mode, audio is always output from the projector regardless of this setting.</td>
</tr>
<tr>
<td>Restore Defaults</td>
<td>You can reset all adjustment values for Set options to their default settings. However, you can retain settings for Edit profile and Switch LAN in General settings.</td>
</tr>
</tbody>
</table>

Audio can only be transferred to one projector. Audio cannot be transferred when connected to multiple projectors.
Uninstalling the Software

Make sure you check the following points before starting uninstallation.

- For Windows, you need administrator authority to uninstall EasyMP Network Projection.
- Close all running applications before starting uninstallation.

For Windows XP

1. Click Start, and then click Control Panel.
2. Double-click Add or Remove Programs.
3. Select EasyMP Network Projection, and then click Change/Remove.

For Windows Vista/Windows 7

1. Click Start, and then click Control Panel.
2. Click Uninstall a program from the Program category.
3. Select EasyMP Network Projection, and then click Uninstall/Change.

For Mac OS X

1. Open the Applications folder.
2. Open the EasyMP Network Projection folder, and then double-click EasyMP Network Projection Uninstaller.app to uninstall the software.
Connection Limitations

When projecting computer images while running EasyMP Network Projection, the following restrictions apply. Confirm these points.

Supported Resolutions

The following computer screen resolutions can be projected. You cannot connect to a computer with a resolution greater than WUXGA.

- **VGA** (640x480)
- **SVGA** (800x600)*
- **XGA** (1024x768)*
- **SXGA** (1280x960)
- **SXGA** (1280x1024)*
- **SXGA+** (1400x1050)*
- **WXGA** (1280x768)*
- **WXGA** (1280x800)*
- **WXGA+** (1440x900)*
- **UXGA** (1600x1200)
- **WUXGA** (1920x1200)

* Supported resolutions when multi-screen display function is on.

When using a computer screen with a unique aspect ratio, depending on the resolution of the computer and the projector, the resolution is increased or decreased so as not to impair the image quality. Depending on the resolution, at times the vertical or horizontal margins may be projected in black.

Display Color

The number of colors for computer screens that can be projected.

<table>
<thead>
<tr>
<th></th>
<th>Windows</th>
<th>Mac OS</th>
</tr>
</thead>
<tbody>
<tr>
<td>16-bit color</td>
<td>About 32,000 colors (16-bit)</td>
<td>About 16.7 million colors (32-bit)</td>
</tr>
</tbody>
</table>

The operational guarantee for multi-screen display is 16-bit and 32-bit color.

Other Limitations

- If the transmission speed of the wireless LAN is low, the network might be cut off unexpectedly.
- Applications that use part of DirectX functions may not be displayed correctly. (Windows only)
- Cannot project full screen MS-DOS prompts. (Windows only)
- There are times when the image on the computer screen and the image projected by the projector may not match exactly.
- Movies are not played as smoothly as they are on a computer.

When Using Windows Vista or Windows 7

Note the following points when using EasyMP Network Projection on a computer running Windows Vista or Windows 7.
**Limitations when projecting from Windows Photo Gallery or Windows Live Photo Gallery**

Note the following two limitations when launching Windows Photo Gallery or Windows Live Photo Gallery when EasyMP Network Projection is running.

- Slideshow is played back in simple mode when projecting from Windows Photo Gallery or Windows Live Photo Gallery. Because the toolbar is not displayed, you cannot change the Theme (effects) while playing a slide show, regardless of the Windows Experience Index rating. Once simple mode has started, you cannot change modes while Windows Photo Gallery or Windows Live Photo Gallery is running even if you close EasyMP Network Projection. Restart Windows Photo Gallery or Windows Live Photo Gallery.
- You cannot play movies.

**Limitations in Windows Aero**

Note the following two limitations when the window design for your computer is Windows Aero.

- The layered window is projected regardless of Transfer layered window from Set options in EasyMP Network Projection. For example, when Transfer layered window for the EasyMP Network Projection toolbar is disabled, it is not projected even if it is displayed on the computer screen, however the toolbar is projected.

- A few minutes after you connect a computer to the projector over a network with EasyMP Network Projection, the following message may be displayed. It is recommended that you select **Keep the current color scheme, and don’t show this message again**. This selection is enabled until the computer is restarted.

![Image showing the Windows color scheme change message](image)

**Limitations when projecting from Windows Media Center**

You cannot project images in full screen display using Windows Media Center. Switch to the window display mode to project the images.
## Troubleshooting

### Cannot connect to the projector you want to use.

#### Cannot connect the projector and the computer via wireless LAN.

<table>
<thead>
<tr>
<th>Check</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Is the Wireless LAN unit connected?</td>
<td>Check that the Wireless LAN unit is securely connected.</td>
</tr>
<tr>
<td>Is the SSID the same as that of the access point?</td>
<td>Set an SSID that is different from that of the access point.</td>
</tr>
<tr>
<td>(For Quick Connection Mode)</td>
<td>You can make the SSID setting from the projector's <strong>Network</strong> menu.</td>
</tr>
<tr>
<td></td>
<td>See your projector <em>User’s Guide</em> for details.</td>
</tr>
<tr>
<td>Is the DHCP function for Wired LAN turned On?</td>
<td>Set the <strong>DHCP</strong> setting to <strong>Off</strong> from <strong>Wired LAN</strong> in the Configuration menu.</td>
</tr>
<tr>
<td>(For Quick Connection Mode)</td>
<td>See your projector <em>User’s Guide</em> for details.</td>
</tr>
<tr>
<td>Is the computer's wireless LAN function working?</td>
<td>Check that the wireless LAN adaptor or wireless LAN card is installed on the computer.</td>
</tr>
<tr>
<td>Is the wireless LAN setting enabled when the computer is in power save mode?</td>
<td>Enable the wireless LAN.</td>
</tr>
<tr>
<td>Are there any obstacles between the access point and the computer or projector?</td>
<td>Sometimes the indoor environment prevents the projector from being found in a search. Check for any obstacles between the access point and the computer or projector, and change their position to improve the communication.</td>
</tr>
<tr>
<td>Is the computer’s wireless LAN radio strength set to low?</td>
<td>Set the radio strength to maximum.</td>

About Notations

In this guide, the operating systems above are referred to as "Windows XP," "Windows Vista," and "Windows 7". Furthermore, the collective term Windows may be used to refer to Windows XP, Windows Vista, and Windows 7, and multiple versions of Windows may be referred to as, for example, Windows XP/Vista, with the Windows notation omitted.

Mac OS X 10.4.x
Mac OS X 10.5.x
Mac OS X 10.6.x
Mac OS X 10.7.x

In this guide, the operating systems above are referred to as "Mac OS X 10.4.x," "Mac OS X 10.5.x," "Mac OS X 10.6.x", and "Mac OS X 10.7.x". Furthermore, the collective term "Mac OS X" is used to refer to them all.

Trademarks

IBM, DOS/V, and XGA are trademarks or registered trademarks of International Business Machines Corporation.

Macintosh, Mac, Mac OS, and iMac are trademarks of Apple Inc.
