Setting Up the TV

Follow the steps in these sections to prepare a spot for your TV, set it up, connect it, turn it on, and prepare it for viewing:

• “Selecting a Location” below
• “Installing the Set-Top Shelf” on page 12
• “Connecting the HDTV Tuner” on page 14
• “Connecting the CD-R/RW Drive” on page 15
• “Connecting Other Equipment” on page 16
• “Preparing the Remote Control” on page 33
• “Controlling the HDTV Tuner With the Remote Control” on page 35
• “Controlling Other Equipment With the Remote Control” on page 36
• “Plugging In and Turning On the TV” on page 41
• “Skipping Unused Input Sources” on page 43
• “Labelling Input Sources” on page 44
• “Turning Off the TV” on page 46

Selecting a Location
Select a suitable location for your TV and follow all of its safety instructions to ensure it operates effectively and safely, as described in these sections:

• “Important Safety Instructions” below
• “Outdoor Antenna Installation and Grounding” on page 10
• “Suggested Supports or Stands” on page 11

Important Safety Instructions

Selecting a Suitable Environment for the TV
• The TV is very heavy. Two people are required to lift or move the TV to avoid injury.
• Do not place the TV on an unstable or tilted cart, stand, or table. Place the TV on the center of the stand, making sure it is fully supported on all sides.
• Do not place the TV near water or sources of heat.
• Do not place the TV in direct sunlight, such as in front of a window.
Setting Up the TV

- Do not place the TV in an area subject to vibration.
- Do not place the TV or the remote control on top of or near heat-producing equipment or in a hot location.
- Do not operate the TV in an area with high temperatures or humidity, or where large amounts of dust are present.
- Leave at least 12 inches (30 cm) of room around the vents on the sides of the TV and do not block the vents. They provide ventilation and prevent the TV from overheating.
- Do not use the TV in temperatures outside of the range of 41 to 95 °F (5 to 35 °C).
- Do not store the TV in temperatures outside the range of 14 to 140 °F (–10 to 60 °C).
- If you place the TV in a permanent installation near a wall, secure the TV to the wall using screws and steel wire connected to the two screw holes on the top rear of the TV.

Plugging the TV Into an Electrical Outlet

- Use only the type of power source indicated on the TV. If you are not sure of the power available, consult your dealer or power company.
- Place the TV near a wall outlet where the power cord can be easily unplugged.
- Do not overload wall outlets, extension cords, or integral convenience receptacles. This can cause fire or electric shock.
- Do not defeat the safety purpose of the polarized plug (two blades, with one wider than the other). Connect the plug only to a compatible outlet where you can fully insert the plug to prevent exposure of the plug blades. If you are unable to insert the plug fully, try reversing the plug. If the provided plug does not fit your outlet, consult an electrician for replacement of the outlet.
- Do not place the TV where the power cord can be walked on. This may result in fraying or damage to the plug.
- Take the following precautions when plugging in the TV. Failure to comply with these precautions could result in sparks, fire, or electric shock: Do not insert the plug into an outlet with dust present. Do not insert the plug with wet hands. Insert the plug firmly into the outlet.
- Unplug the TV during lightning storms or when it will not be used for extended periods.
- Unplug the TV from the wall outlet before cleaning.
- Pull on the plug housing to unplug the power cord; do not pull on the cord.
Operating the TV Safely

- Except as specifically explained in this User’s Guide, do not attempt to service this product yourself. Refer all servicing to qualified personnel. Opening or removing covers may expose you to dangerous voltages or other hazards.

- Unplug the TV from the wall outlet and refer servicing to qualified personnel under the following conditions:
  - When the power cord is damaged or frayed, or if it becomes hot.
  - When liquid has been spilled into the TV or if it has been exposed to rain or water.
  - If the TV does not operate normally when you follow the operating instructions, or if it exhibits a distinct change in performance, indicating a need for service.
  - If the TV has been dropped or the housing has been damaged.

- Do not stand on the TV or place heavy objects on top of it.

- Do not block the slots and openings in the TV case.

- Never push objects of any kind through the cabinet slots.

- Never insert an object other than a digital photo card in the card slots, or an object other than paper or an ink cassette into the printer. Do not use sharp tools to remove a card from a slot or you may damage the slot and card.

- Use only the ink cassette and paper specified for use in the Epson Livingstation printer (part number V13H151010).

- Never spill liquid of any kind into the TV.

- Do not move or lift the TV by moving or lifting the stand or table supporting it; the TV may fall and cause injury.

Replacing the Projection Lamp Safely

- Never touch the projection lamp immediately after turning off the TV or you could be burned. Wait at least 30 minutes after turning off the TV to let the lamp cool down completely.

- If the lamp has broken, handle the shards carefully to avoid injury.

- The used lamp contains mercury. Please consult your state and local regulations regarding disposal or recycling. Do not put the lamp in the trash.

- Install the new lamp securely to avoid an electrical short or other damage. Insert the lamp as described on page 97, pushing it all the way into its slot. Tighten the screws to lock the lamp securely into place or the lamp will not come on.

- Do not touch the glass on the lamp with your bare hands. This can shorten the lamp life and obscure the projected image. Use a cloth or glove to handle the new lamp.

- Do not drop the replacement lamp or bump it against any surface; the lamp could be permanently damaged.
Outdoor Antenna Installation and Grounding

- It is best to have a professional technician install an antenna on the roof of a structure. If you install an antenna yourself, be careful to avoid serious injury.

- If an outside antenna is connected through other equipment, be sure the antenna system is grounded so as to provide protection against voltage surges and built-up static charges. In the U.S.A., section 810 of the National Electrical Code, ANSI/NFPA 70, provides information on proper grounding of the mast and supporting structure, grounding of the lead-in wire to an antenna-discharge unit, size of grounding conductors, location of antenna-discharge unit, connection to grounding electrode, and requirements for the grounding electrode.

Example of Antenna Grounding in National Electrical Code Instructions

- An outdoor antenna system should not be located in the vicinity of overhead power lines/electric lights or power circuits, or where it can fall onto such power lines or circuits. When installing an outdoor antenna system, extreme care should be taken to keep it from touching such power lines or circuits as contact with them might be fatal.

- For added protection during a lightning storm, or when it is left unattended and unused for long periods of time, unplug the TV from the wall outlet and disconnect the antenna. This will prevent damage due to lightning and power-line surges.
**Suggested Supports or Stands**

You can use an optional Epson TV stand to support your TV. Order part number V12H003R03 (for the LS47P2) or V12H003R02 (for the LS57P2) from your dealer.

If you use your own stand, make sure it can securely support the TV as follows:

<table>
<thead>
<tr>
<th>Specification</th>
<th>LS47P2</th>
<th>LS57P2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Width of the base</td>
<td>47 inches (119 cm)</td>
<td>56 inches (142 cm)</td>
</tr>
<tr>
<td>(minimum)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Depth of the base</td>
<td>16 inches (41 cm)</td>
<td>18 inches (46 cm)</td>
</tr>
<tr>
<td>(minimum)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Weight capacity</td>
<td>331 lb (159.0 kg)</td>
<td>331 lb (159.0 kg)</td>
</tr>
<tr>
<td>(minimum)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Make sure you place the stand in a location that allows you access to the back of the TV and provides at least 12 inches (30 cm) of room for ventilation at the sides.
Installing the Set-Top Shelf

The set-top shelf provides a convenient support for a center surround sound speaker or other component on top of the TV. The shelf can hold up to 11 lb (5 kg).

1. Fold the shelf into an upside-down L-shape with the shorter end on top.

2. Align the holes in the shelf with the holes on the back of the TV.

3. Using a Phillips-head screwdriver, secure the shelf to the TV with the four screws that came with it. Tighten the screws.

Caution
Don’t fold the shelf backwards on its hinge or it may break.
Securing the TV

You may want to secure the TV to a wall or other support so it stays upright on its stand during an earthquake or other situation. Use wires and screws connected to the outer pair of holes on the top of the TV to secure the TV to the wall or other support.
Connecting the HDTV Tuner

If your TV included an HDTV tuner, follow these instructions to connect it.

1. Turn off and unplug your TV and tuner.

2. Slide the OUTPUT SWITCH on the back of the tuner to YPbPr.

3. Connect your antenna’s wall jack to the RF IN jack on the tuner using a standard coaxial antenna cable.

4. Connect one end of the component video cable (included with your TV) to the Y (green), Pb (blue), and Pr (red) connectors on the back of the TV, as shown below. Be sure to match the colors of the cables to the colors of the connectors.

5. Connect the other end of the cable to the Y, Pb, and Pr connectors on the tuner.

6. Connect one end of the included RCA-style audio cable (with red/white connectors) to the L–Audio–R connectors on the back of the TV.
7. Connect the other end of the cable to the L–Audio–R connectors on the tuner.

8. Plug the TV and tuner into an electrical outlet.

9. See the User’s Guide included with the tuner for instructions on setting up channels, entering the date and time, and making other basic settings.

**Connecting the CD-R/RW Drive**

Follow these instructions to connect the CD-R/RW drive included with your TV.

1. Connect the square end of a USB cable to the USB port on your external CD-R/RW drive.

2. Connect the flat end of the USB cable to the EXT. I/F connector on the back of the TV.

3. Plug the power cord that came with the CD-R/RW into the drive's power supply, then connect the cords to the drive and an electrical outlet.

4. Turn on the CD-R/RW drive by flipping the power switch in back.

**Note**

To use the TV remote control to operate the tuner, see page 35. For more information on using the tuner, see the User’s Guide that came with it.

**Note**

If you purchased an optional Epson TV stand, a mounting bracket is included for the drive. You may want to attach the drive to the stand before connecting its cables.

**Note**

The connectors on your CD-R/RW drive may be in different positions than shown.
Connecting Other Equipment

You can connect the TV to a variety of equipment. Follow the steps in the applicable sections below, depending on the equipment you're connecting and the type of connector or service you're using.

- “Antenna or Direct Cable TV Connection” on page 17
- “Cable Box Connections” on page 18
- “Satellite Receiver Connection” on page 20
- “DVD Player With a DVI Connection” on page 21
- “DVD Player With Component Video Connection” on page 22
- “DVD Player With an S-Video Connection” on page 23
- “VCR Connection” on page 24
- “VCR and Cable Service (Without Cable Box) Connection” on page 25
- “VCR and Cable Box Connection” on page 26
- “VCR and Satellite Receiver Connection” on page 27
- “Stereo Amplifier Connection” on page 29
- “PC or Game Console Connection” on page 30
- “Camcorder, Digital Camera, or Other Portable Video Connection” on page 31
- “Other Optional Device Connections” on page 32

Note
For a description of all the available connectors on the front and back panels, see the inside back cover of this book.
**Antenna or Direct Cable TV Connection**

Connect the TV to an outside antenna or to your cable system using a 75-ohm coaxial cable.

Connect the cable coming into the house to the ANT 1 connector on the back of the TV.

If your coaxial cable has a screw-type connector on the end, secure it by turning the end clockwise.

If you'll also be attaching a VCR to the TV, you need to use a different connection method so you can record TV programs. See “VCR and Cable Service (Without Cable Box) Connection” on page 25.

**Note**

If you have an older home, you may have a 300-ohm twin lead cable. If so, you also need an antenna connector or U/V splitter to connect it to your TV. Keep the twin lead cable as far away from your TV as possible to reduce the radio noise that may cause signal problems.
Cable Box Connections

The connection method differs, depending on the type of cable box you have. Your cable box may unscramble signals for all of your channels or it may unscramble only some of them.

If you'll also be attaching a VCR to the TV, you need to use a different connection method so you can record TV programs. See “VCR and Cable Box Connection” on page 26.

Cable Box Unscrambles All Channels

If your cable box unscrambles signals for all of your channels, connect it as follows:

1. Connect the cable coming into the house to the IN connector on the cable box.
2. Connect one end of a coaxial cable to the OUT connector on the cable box.
3. Connect the other end of the coaxial cable to the ANT 1 connector on the back of the TV.

If your coaxial cable has a screw-type connector on the end, secure it by turning the end clockwise.

Note
Before connecting a cable box to the TV, be sure to read any instructions that came with the cable box.
**Cable Box Unscrambles Only Some of Your Channels**

If your cable box unscrambles signals for only some of your channels, connect it as follows:

1. Connect the cable coming into the house to the **ANT 1** connector on the back of the TV.

2. Remove the jumper cable connected to both the **RF Output** and **ANT 2** connectors on the back of the TV. Retain the cable.

3. Connect one end of a coaxial cable to the **RF Output** connector on the back of the TV.

4. Connect the other end of the coaxial cable to the **IN** connector on the cable box.
   
   If your coaxial cable has a screw-type connector on the end, secure it by turning the end clockwise.

5. Connect another coaxial cable to the **OUT** connector on the cable box.

6. Connect the other end of the coaxial cable to the **ANT 2** connector on the back of the TV.

7. Be sure to turn on use of the TV’s **ANT 2** port, as described on page 47.

---

**Note**

Be sure to retain the jumper cable in case you change your TV connections later. You’ll need to connect it again in certain connection schemes to provide the channel zapping feature.
**Satellite Receiver Connection**

If you'll also be attaching a VCR to the TV, you need to use a different connection method so you can record TV programs. See “VCR and Satellite Receiver Connection” on page 27.

1. Turn off and unplug your TV and your satellite receiver.

2. Connect the satellite antenna cable coming into your house to the **Satellite In** connector on your satellite receiver.

3. Connect one end of an S-video cable to one of the **S-Video** connectors on the back of the TV or to the one on the front of the TV beneath the connector cover.

   (If your satellite receiver uses a DVI connection, connect a DVI cable instead, as shown on page 21. If it uses a component video connection, connect it as shown on page 22.)

4. Connect the other end of the S-video cable to the **S-Video** connector on your satellite receiver.

5. Connect one end of a standard, red/white audio cable to the corresponding **Video Inputs R and L Audio** connectors on the back or front of the TV.

6. Connect the other end of the audio cable to the **R and L Audio Line Out** connectors on your satellite receiver.

7. Plug your TV and satellite receiver back into their electrical outlets.

---

**Note**

If your satellite receiver doesn’t have an S-video connector, you can connect a video cable (yellow) to the Video connectors instead of the S-video cable using these instructions.

It’s best to connect your satellite receiver to the S-Video connectors on the back of the TV to free up the S-Video connector on the front to connect a camcorder.
**DVD Player With a DVI Connection**

1. Turn off and unplug your TV and your DVD player.

2. Connect one end of a DVI-HDTV cable to the DVI-HDTV Input connector on the back of the TV.

3. Connect the other end of the DVI-HDTV cable to the DVI-HDTV OUT connector on your DVD player.

4. Connect one end of a standard, red/white audio cable to the DVI-HDTV Input R and L Audio connectors on the back of the TV.

5. Connect the other end of the audio cable to the R and L Audio Out connectors on your DVD player.

6. Plug your TV and DVD player back into their electrical outlets.

**Note**
If you have any trouble switching to the DVI input source, make sure you didn’t turn off the Use of DVI Input setting. See page 43 for details.
**DVD Player With Component Video Connection**

1. Connect one end of the component video cable to any available set of Y (green), PB (blue), and PR (red) connectors on the back of the TV.

2. Connect the other end of the component video cable to the corresponding color Component Video Out connectors on your DVD player.

3. Connect one end of a standard, red/white audio cable to the corresponding Component Input R and L Audio connectors on the back of the TV.

4. Connect the other end of the audio cable to the R and L Audio Line Out connectors on your DVD player.

*Note*
The connectors may be labeled Y, B-Y, R-Y, or Y, Cb, Cr, or Y, Pb, Pr on your DVD player, so just match the connector colors.
**DVD Player With an S-Video Connection**

1. Connect one end of an S-video cable to one of the S-Video connectors on the back of the TV or to the one on the front of the TV beneath the connector cover.

2. Connect the other end of the S-video cable to the S-Video connector on your DVD player.

3. Connect one end of a standard, red/white audio cable to the corresponding Video Inputs R and L Audio connectors on the back or front of the TV.

4. Connect the other end of the audio cable to the R and L Audio Line Out connectors on your DVD player.

**Note**
If your DVD player doesn’t have an S-video connector, you can connect a video cable (yellow) to the Video connectors instead of the S-video cable using these instructions.

It’s best to connect your DVD player to the S-video connectors on the back of the TV to free up the S-video connector on the front to connect a camcorder.
VCR Connection

Follow these steps to connect a VCR by itself.

If you’re connecting a cable, cable box, or satellite receiver along with the VCR, see the instructions in the sections following this one instead.

1. Connect one end of an S-video cable to one of the S-Video connectors on the back of the TV or to the one on the front of the TV beneath the connector cover.

2. Connect the other end of the S-video cable to the S-Video connector on your VCR.

3. Connect one end of a standard, red/white audio cable to the corresponding Video Inputs R and L Audio connectors on the back or front of the TV.

4. Connect the other end of the audio cable to the R and L Audio Line Out connectors on your VCR.

Note
If your VCR doesn’t have an S-video connector, you can connect a video cable (yellow) to the Video connectors instead of the S-video cable using these instructions.

It’s best to connect your VCR to the S-Video connectors on the back of the TV to free up the S-Video connector on the front to connect a camcorder.
VCR and Cable Service (Without Cable Box) Connection

1. Connect the VCR as described in “VCR Connection” on page 24.

2. Connect the cable coming into the house to the IN connector on the VCR.

3. Connect one end of a coaxial cable to the OUT connector on the VCR.

4. Connect the other end of the coaxial cable to the ANT 1 connector on the back of the TV.

   If your coaxial cable has a screw-type connector on the end, secure it by turning the end clockwise.
VCR and Cable Box Connection

1. Turn off and unplug your TV, VCR, and cable box.
2. Connect the VCR as described in “VCR Connection” on page 24.
3. Connect the cable line coming into the house to the ANT 1 connector on the back of the TV.
4. Remove the jumper cable connected to both the RF Output and ANT 2 connectors on the back of the TV. Retain the cable.
5. Connect one end of a coaxial cable to the RF Output connector on the back of the TV.
6. Connect the other end of the coaxial cable to the IN connector on the cable box. If your coaxial cable has a screw-type connector on the end, secure it by turning the end clockwise.
7. Connect another coaxial cable to the OUT connector on the cable box.
8. Connect the other end of the coaxial cable to the IN connector on the VCR.
9. Connect another coaxial cable to the OUT connector on the VCR.
10. Connect the other end of the coaxial cable to the ANT 2 connector on the back of the TV.
11. Be sure to turn on use of the TV’s ANT 2 port, as described on page 47.
12. Plug your TV, VCR, and cable box back into an electrical outlet.

Note
Before connecting a cable box to the TV, be sure to read any instructions that came with the cable box.

Note
Be sure to retain the jumper cable in case you change your TV connections later. You’ll need to connect it again in certain connection schemes to provide the channel zapping feature.
**VCR and Satellite Receiver Connection**

1. Turn off and unplug your TV, VCR, and satellite receiver.

2. Connect the VCR as described in “VCR Connection” on page 24.

3. Connect the satellite antenna cable to the Satellite In connector on your satellite receiver.

4. Connect one end of an S-video cable to one of the S-video connectors on your satellite receiver.
   
   (If your satellite receiver uses a DVI connection, connect a DVI cable instead, as shown on page 21. If it uses a component video connection, connect it as shown on page 22.)

5. Connect the other end of the S-video cable to one of the S-video connectors on your VCR.

6. Connect one end of a standard, red/white audio cable to the R and L Audio Line Out connectors on your satellite receiver.

7. Connect the other end of the audio cable to the R and L Audio Line In connectors on your VCR.

---

*Note*

Before connecting a satellite receiver to the TV, be sure to read any instructions that came with the receiver.

*Note*

If your satellite receiver doesn’t have an S-video connector, you can connect a video cable (yellow) to the Video connectors instead of the S-video cable using these instructions.

It’s best to connect your satellite receiver to the S-Video connectors on the back of the TV to free up the S-Video connector on the front to connect a camcorder.
8. If your satellite service does not include local channels, you can also connect an outside antenna or cable service line to the VHF/UHF IN connector on the VCR. Then connect a coaxial cable to the VHF/UHF OUT connector and to the ANT 1 connector on the back of your TV.

9. Plug your TV, VCR, and satellite receiver back into an electrical outlet.
Stereo Amplifier Connection

1. Connect one end of a standard, red/white audio cable to the R and L Audio Output Variable connectors on the back of your TV.

2. Connect the other end of the audio cable to the R and L Audio Line Input connectors on your stereo amplifier.

3. Turn the TV’s speaker volume all the way up to the maximum level. Then use your amplifier remote control to adjust the volume.

Note
You can’t connect external speakers to the TV directly; you must connect them to a stereo amplifier.

For best sound quality, you may want to connect the amplifier directly to your audio sources (DVD player, HDTV tuner, etc.).
**PC or Game Console Connection**

1. For a PC, connect one end of a Dsub15 RGB for PC cable to the monitor or PC output connector on the back of your PC.

For a game console, just use the cable that came with the console.

2. Connect the other end of the cable to the PC connector on the front of the TV.

3. Connect any necessary audio cables to your device and to the Video Inputs R and L Audio connectors on the front of the TV.

**Note**

To display images on your laptop monitor and the TV screen at the same time, you may need to press the Fn or button on your laptop. See your computer documentation for details.

If you have any trouble switching to the PC input source, make sure you didn’t turn off the Use of PC Input setting. See page 43 for details.
**Camcorder, Digital Camera, or Other Portable Video Connection**

It’s best to connect a portable video device to the S-Video or Video connector on the front of the TV; however, you can use the connectors on the back. These instructions use a camcorder as an example.

1. Connect one end of an S-video cable to the S-Video connector on the front of the TV beneath the connector cover.

2. Connect the other end of the S-video cable to the S-Video connector on your camcorder.

3. Connect one end of a standard, red/white audio cable to the Video Inputs R and L Audio connectors on the front of the TV.

4. Connect the other end of the audio cable to the R and L A/V Output connectors on your camcorder.

**Note**

If your device doesn’t have an S-video connector, you can connect a video cable (yellow) to the Video connector instead of the S-video cable using these instructions.

If you’re connecting a device with mono audio, connect the left (white) cable to the L A/V Output connector on your device and the L Audio connector on the front of the TV.

If you connect your device to a video connector on the TV’s front panel, select Video 4 as the input source using the TV/Video button.
**Other Optional Device Connections**

**Headphones**
Connect headphones to the Headphone connector on the front of the TV.

**Remote IR Repeater**
Connecting a remote IR repeater lets you control other equipment (such as a VCR or DVD player) by using its remote control pointed at the TV’s remote control receiver on its front panel.

Connect the remote IR repeater to the Remote-out connector on the back of the TV using the cable that came with the repeater.

---

*Note*
When you connect headphones, the TV speakers are turned off, but sound is still audible from any audio source you have connected to the TV.
Preparing the Remote Control

Before you can use the remote control, you need to insert the batteries and make sure you aim it correctly. For a description of its functions when using it to operate the TV, see the inside front cover of this book; for instructions on using it with the HDTV tuner, see page 35.

Inserting the Batteries
The remote control uses two AA batteries. You’ll need to install the batteries that came with your TV before you can use the remote control.

1  Press in on the top of the battery cover on the back of the remote control. Then slide the cover down and off the remote.

2  Insert the batteries as shown below, making sure the + and – ends face the right way. Then push them down flat.

3  Place the cover into the grooves and slide the cover all the way up until it clicks into place.

Caution
When you replace the batteries, take the following precautions:

Don’t mix old and new batteries.

If the batteries leak, wipe away the battery fluid with a soft cloth. If fluid gets on your hands, wash them immediately.

Remove the batteries if you won’t be using the TV for a while.

Dispose of old batteries in accordance with the regulations in your area.
**Operating the Remote Control**

Aim the remote control at the front of the TV, within about a 25° horizontal angle to the left or right and a 15° vertical angle up or down from the remote receiver.

![Diagram showing remote control angle](image)

Make sure the room lighting is not too bright and not shining directly on the remote control or the TV receiver window. Keep the transmitter area on the top of the remote and the TV receiver window clean.

To turn off the remote control’s beeping sound, hold down the **Menu** button for 2 seconds, until the remote control light stops flashing. Then press the **Volume** down button. (To turn it back on, hold down the **Menu** button for 2 seconds, until the remote control light stops flashing. Then press the **Volume** up button.)

**Remote Control Information**

The TV may not respond to remote control commands under the following conditions:

- There is an object between the remote control IR emitter and the IR receiver on the TV.
- Ambient light is too bright.
- Certain types of fluorescent lighting are used.
- A strong light source shines into the IR receiver.
- Other equipment that emits infrared energy, such as a radiant room heater, is in the room.

If these conditions cause problems for your TV’s remote control, try the following:

- The remote control’s batteries may be low on power; replace them.
- Dim the ambient lighting and/or turn off any fluorescent lights.
- Close any window coverings and/or move the TV out of direct sunlight.
- Turn off other equipment that emits infrared energy.
Controlling the HDTV Tuner With the Remote Control

You can use the TV’s remote control to operate the HDTV tuner that came with your TV (tuner not included in all areas). That way, you only need to keep one remote control at hand.

1. Move the equipment switch at the top of the TV remote control to the STB1 (Set-Top Box 1) position. This position lets you operate the HDTV tuner.

2. Use the remote control to operate the tuner, as described below. See the tuner User’s Guide for details.

- **Power button**: Turns the tuner on and off
- **Menu button**: Press to enter or exit the menu system
- **Number buttons**: Use to enter channel numbers and passwords, and to set the time. To enter a digital subchannel (such as 28–1 or 28-2), enter the main channel number (such as 28), press the – key, then enter the subchannel (1, 2, etc.). Press Ch Enter to complete the selection.
- **MTS button (Multichannel Television Stereo)**: Selects an alternate audio track or language
- **Guide button**: Displays the electronic program guide
- **Navigation buttons**: Moves highlight up, down, left, or right in menus. Press Enter to accept a selection.
- **Vol. and Mute buttons**: Control the sound
- **Channel up/down button**: Moves the channel up or down
- **Ch. Display/Info button**: Displays the channel and programming information

When you want to operate the TV again, slide the equipment switch on the remote control back to the TV position.

Note
You can also program the remote to operate other equipment you have connected to the TV. See page 36 for instructions.
Controlling Other Equipment With the Remote Control

You can program the remote control to operate other home theater equipment, such as a DVD player, VCR, or satellite receiver. That way, you can use just one remote control when watching movies or TV programs.

First you must program your remote control so it knows what kind of equipment you’re using. You do this by entering a code that corresponds to the equipment and its manufacturer.

**Programming the Remote Control**

1. Look up the three-digit code for your equipment and manufacturer in the tables beginning on page 37.

2. Slide the equipment switch on the top of the remote control to the setting for your equipment type. For example, to enter a DVD player code, slide the switch to the DVD setting. If you reprogram the STB1 setting, you won’t be able to use the remote control to operate the HDTV tuner that may have come with your TV, unless you re-enter the tuner’s code (101).

3. Hold down the **Menu** button on the remote control until its light comes on (about 2 to 3 seconds).

4. Enter the three-digit code using the remote control number buttons (for example, 420). The remote control beeps once.

   If it beeps 3 times, you’ve entered an invalid code. Repeat steps 3 and 4 using the correct code.

**Using the Programmed Remote Control With Your Other Equipment**

Once you’ve programmed the remote control, follow these steps to use it to control your equipment:

1. Slide the equipment switch at the top of the remote control to the type of equipment you want to control, such as DVD.

2. Use the 8 buttons on the top of the remote control to play and stop movies, skip and pause tracks, etc.

When you want to operate the TV again, slide the equipment switch on the remote control back to the TV position.
Remote Control Programming Codes

The programming code for the Epson Livingstation HDTV tuner is 101. Codes for other manufacturers’ products are listed below.

**DVD player programming codes**

Plugging In and Turning On the TV

After your video and audio equipment are connected and the remote control is ready, you can plug in and turn on the TV. You may want to turn on your connected equipment and insert a tape or disc, if necessary, to test the TV with all of its video and audio sources.

1. Plug the power cord into a wall outlet or power strip. The Power light comes on orange.

2. If you're using the remote control, make sure the equipment switch at the top is in the TV position.

3. Press the Power button on the TV panel or the remote control.

   The Power light flashes green while the TV warms up.

   After a few moments, the Power light stops flashing and shines green.

4. Press the TV/Video button on the remote control or the TV panel to select the source you want to look at (TV, DVD, etc.).

Note
You can press the TV/Video button 10 seconds after pressing the Power button. You don't have to wait for the Power light to stop flashing first.

To turn off the DVI and PC ports when you’re not using them (so you don’t have to cycle through them with the TV/Video button), see the instructions on page 43.
If you see a blank screen with No Signal at the bottom:

- Turn on the source (VCR, DVD, etc.)
- Insert a disc or tape, if you're viewing one, and press Play
- Press the TV/Video button to select the source
- Check the cable connections
- If it's still not working, see “Basic Operation Problems” on page 112.

**Changing the Language of the Menus and Screen Text**

You can set the menu system, photo viewer, and other screens to display messages in English, French, or Spanish.

1. Press the Menu button on the TV panel or the remote control.
2. To highlight the Setting menu tab, press Next >.
3. Press Enter. The Auto Aspect setting is highlighted.

4. Press Select ▼ to highlight the Language setting.
5 Press Prev < or Next > to select English, Français (French), or Español (Spanish).

6 Press Exit to select another menu or press Menu to exit the menu system.

**Skipping Unused Input Sources**

As you switch between input sources using the TV/Video button, the TV goes to sources to which you've connected equipment. However, the TV goes to the DVI and PC sources even if you aren't using them, unless you turn the ports off.

To turn off the DVI and PC ports when you're not using them (so you don’t have to cycle through them with the TV/Video button), follow these steps:

1. Press the Menu button on the TV panel or the remote control.
2. To highlight the Setting menu tab, press Next >.
3. Press Enter. The Auto Aspect setting is highlighted.
4. Press Select ▼ to highlight Use of DVI Input.

5 Press Prev. < or Next > to turn the setting OFF.

6 Repeat step 4 and 5 for the Use of PC Input setting.

7 Press Menu to exit the menus.
Labelling Input Sources

It's helpful to label your input sources if you're using more than one device with your TV, such as a DVD player, VCR, etc. Then you can easily recognize the devices as you switch between them. The label appears on the TV screen when you display or switch input sources.

1. Press the Menu button on the TV panel or the remote control.

2. To highlight the Setting menu tab, press Next >.

3. Press Enter. The Auto Aspect setting is highlighted.

4. Press Select ▼ to move to the Input Label setting.

5. Press Enter. You see the Input Label screen:

6. To label an input source, press Select ▼ or Select ▲ to highlight the source in the Input column, such as VIDEO1.

7. Press Enter. The highlight moves to the top of the Edit column.
**Selecting a Predefined Label**

1. Press Select ▼ or Select ▲ to highlight the label you want.

   If 1/2 appears in the bottom right corner of the screen, you can press Next > to view more predefined labels on a second screen. (Press Prev < to return to screen 1.)

2. Press Enter.

**Creating a Custom Label**

1. Press Select ▼ or Select ▲ to highlight Manual in the Edit column.

2. Press Enter. The highlight moves to the first character of the label in the Label column.

3. You can create a label up to 10 characters long, made up of letters, numbers, and/or symbols. To cycle through the letters of the alphabet, press Select ▼. To cycle through the symbols and then the numbers, press Select ▲. You can hold down the button or press it repeatedly.

4. Once you've selected the first character, press Next > to move to the next character.

5. Repeat steps 3 and 4 until you're finished creating a label. Then press Enter.

**Deleting a Label**

1. Press Select ▼ or Select ▲ to highlight the source in the Input column and press Enter.

2. Press Select ▼ to highlight Clear in the Edit column and press Enter. The label disappears from the Label column. The input source name will appear when you display or switch your input sources.
Turning Off the TV

1. Press the Power button on the TV panel or the remote control.

2. The Power light flashes orange as the TV cools down.

   When it’s cool, the Power light stops flashing and shines orange. Leave the TV like this or unplug it.

Caution

Turn off the TV when not in use. Continuous 24-hour-a-day use may reduce its overall life.

Note

You can also set the TV to turn off automatically after a set period of time (see page 76).
Setting Up and Controlling Channels

If you plan to use your TV’s built-in tuner to view television programs, you’ll need to set up your available channels. You may also want to use the TV’s channel control features or block unwanted viewing of channels or input sources by children, as described in these sections:

- “Setting Up Your TV Channels” below
- “Labelling TV Channels” on page 51
- “Selecting Channels” on page 50
- “Setting Up Favorite Channels” on page 50
- “Setting Up Parental Controls” on page 53

Setting Up Your TV Channels

If you’re receiving your TV programs using a broadcast antenna or a cable system without a cable box, you need to set up the channels that the TV can receive.

You can use Auto Program to automatically search for the available channels and set them up. Then, for channels that are not automatically detected, you can use Manual Program to add them. You can also choose to have the TV “skip” certain channels that you don’t want to view.

Automatically Setting Up Your Channels

Before setting up your channels, make sure you’ve connected your broadcast antenna or cable service line to the ANT 1 or ANT 2 connector on the back of the TV. Then press the TV/Video button on the TV panel or remote control to select your TV signal.

1. Press the Menu button on the TV panel or the remote control.
2. To move to the Channel tab, press Next >.
3. When the Channel tab is highlighted, press Enter. The Antenna 1 setting is highlighted.

Note

If you watch TV programs using an HDTV tuner, or a cable, satellite, or digital TV service with a separate receiver box, you don’t need to set up your channels. The tuner or receiver box does that for you.

Note

You can use the buttons on the TV or the remote for all menu operations.
4 First make sure the correct television source type is selected for Antenna 1 and/or Antenna 2. Select TV for broadcast television via an antenna outside your house. Select CATV for cable television via a cable service line brought into your house.

If you need to change the option, press Select ▼ or Select ▲ to highlight the Antenna 1 or Antenna 2 setting, then press Prev < or Next > to change the option.

5 If you connected a source to the ANT 2 connector, press Select ▼ to highlight the Use of Ant. 2 setting, then press Prev < or Next > to select On.

6 Press Select ▼ to highlight Auto Program, then press Enter.

The menu disappears and Auto Program Setting appears in the middle of the screen as the TV begins searching for available channels. It reports the current channel in the upper right corner. This process takes a few minutes, depending on the number of channels available.

When it’s finished, you return to the Channel menu.

If the automatic program doesn’t detect all of your available channels or if you want to set up the TV to skip certain available channels, follow the steps in the next section.
Manually Adding or Skipping Channels

For channels that are not automatically detected when you use Auto Program, you can use Manual Program to add them. You can also choose to have the TV skip certain channels so you don’t have to cycle through them when you change channels.

1. Press Select ▼ to highlight Manual Program, then press Enter. The screen changes to the following:

2. To select a channel, press Select ▼ or Select ▲ until its number is highlighted in the Channel column.
   
   If the channel number you want is not shown on the screen, press Prev < or Next > to go to the next or previous screen.

3. Press Enter. The highlight moves to the Add/Skip column.

4. Press Prev < or Next > to select Add or Skip, then press Enter.

5. To add or skip another channel, repeat steps 2 through 4.

6. Press Exit to return to the main Channel menu or press Menu to exit the menu system.
Selecting Channels

To select the channel you want to watch, do one of the following:

- Enter the channel number using the number keys and press Ch Enter.
- Press the Ch + or – button to go up or down one channel at a time.
- Press the Ch Prev. button to go back and forth between the previous and current channel.

The channel number and audio mode briefly display in the upper right corner.

If you want to see a channel number after it has disappeared, press the Ch Display button. The channel number and audio mode briefly appear, then the channel number remains on the screen. Press Ch Display again to turn off the display.

Setting Up Favorite Channels

You can create a group of up to 12 favorite channels that you frequently want to watch. Then you can quickly go to those channels by pressing the Favorite button on the remote control.

To set up favorite channels, you must be connected to a broadcast antenna or cable TV system without a decoder box so you can control your channels with the TV tuner.

1. To set up your favorite channels, first select the channel on your TV.

2. Hold down the Favorite button on the remote control for about 3 seconds. Registered appears in the upper left corner of the TV screen.

3. Select the next channel you want to add as a favorite and repeat step 2. You can add up to 12 favorite channels.

Whenever you want to tune to a favorite channel, press the Favorite button. Press it again to go to the next favorite channel, and so on.

If you need to delete a channel from the favorites group, select the channel, then hold down the Exit button on the remote control for about 3 seconds. Removed appears in the upper left corner of the TV screen.

Note

If you’re using an HDTV tuner or a cable, satellite, or digital TV receiver with a separate receiver box, you can select TV channels using the controls that came with the tuner or receiver.
Labelling TV Channels

You may want to label your channels so you can easily identify them by name instead of just by number. The channel label appears with the number in the upper right corner of the screen when you display or switch channels.

1  Press the Menu button on the TV panel or the remote control.

2  To move to the Channel tab, press Next >.

3  When the Channel tab is highlighted, press Enter. The Antenna 1 setting is highlighted.

4  Press Select ▼ to highlight Channel Label, then press Enter. You see this screen:

5  The first channel is highlighted. If you want to label that channel, press Enter.

   To select a different channel, press Select ▼ or Select ▲. If you don’t see the channel you want, press Prev < or Next > to display the next or previous screen. Once you’ve highlighted a channel, press Enter. The highlight moves to the Edit column.
**Selecting a Predefined Label**

1. Press Select ▼ or Select ▲ to highlight the label (such as CBS) in the Edit column. If you don’t see a particular label, press Prev < or Next > to display the next screen.

2. Press Enter. The new label is listed in the Label column and the Channel number is highlighted again.

**Creating a Custom Label**

1. Press Select ▼ or Select ▲ to highlight the Manual option in the Edit column and press Enter. The highlight moves to the first character of the label in the Label column.

2. You can create a label up to 6 characters long, made up of letters, numbers, and/or symbols. To cycle through the letters of the alphabet, press Select ▼. To cycle through the symbols and then the numbers, press Select ▲. You can hold down the button or press it repeatedly.

3. Once you’ve selected the first character, press Next > to move to the next character.

4. Repeat steps 2 and 3 until you’re finished creating a label. Then press Enter.

**Deleting a Label**

1. Press Select ▼ or Select ▲ to highlight the channel in the Channel column and press Enter.

2. Press Select ▼ to highlight Clear in the Edit column and press Enter. The label disappears from the Label column. The channel number will appear when you display or switch channels.
Setting Up Parental Controls

You can control access to rated television programs and block access to certain channels and input sources to prevent viewing of unsuitable materials. The person controlling access creates a password that allows him or her to set up, lock, and unlock the parental controls.

Before setting up parental controls, you need to change the default password to a new one. Write down the new password and keep it in a secure place.

Creating a Password

1. Press the Menu button on the TV panel or the remote control.

2. To move to the Lock tab, press Next >.

3. When the Lock tab is highlighted, press Enter. The highlight moves to the first character in the password field:

4. First you need to enter the default password to access the Lock menu.

   On the remote control, press the 0 button four times (the default password is 0000). Asterisks (*) appear on the screen as you press the buttons.

Note
You can use the buttons on the TV or the remote for all menu operations.
Then you see the Lock menu.

5 Press Select ▼ to highlight Password Change, then press Enter. You see this screen:

6 Use the number buttons on the remote control to enter a four-digit password.

7 Enter the same password again to confirm it. You return to the Lock menu.

8 To block programs using V-Chip, see page 55.

To block certain TV channels and/or input sources, such as a game console, see page 59.

To exit the menu system, press Menu.
**Blocking Programs Using V-Chip**

Your TV is equipped with V-Chip technology that allows you to block the display of TV programs or movies based upon their content rating. You can also block display of programs or movies that don't carry V-Chip ratings (unrated programs). Whenever you need to change the ratings or remove blocking, you need to enter a password.

1. Press the Menu button on the TV panel or the remote control.
2. To move to the Lock tab, press Next >.
3. When the Lock tab is highlighted, press Enter. The highlight moves to the first character in the password field:

![Password Entry Screen]

4. Using the number buttons on the remote control, enter your password. You see the Lock menu.

5. Press Select ▼ to highlight V-Chip.

![V-Chip Menu]

6. Press Prev < or Next > to select ON. The Rating, Unrated, and Country settings become available.

---

**Note**

When you turn on V-Chip blocking, you can’t use channel zapping (described on page 73). To use channel zapping, turn off V-Chip blocking.
7 Press Select ▼ to highlight Country, then press Prev < or Next > to select U.S.A. or Canada.

8 If you want to block access to programs that don't carry V-Chip ratings, press Select ▲ to highlight Unrated. Then press Prev < or Next > to select Block.

9 To set up V-Chip blocking, press Select ▲ to highlight Rating and press Enter.

   If you selected U.S.A as the Country setting, you see the U.S.A. Rating screen:

   ![U.S.A. Rating Screen]

   Go to step 10.

   If you selected Canada as the Country setting, you see the Canada Rating screen:

   ![Canada Rating Screen]

   Press Select ▼ or Select ▲ to select French Rating, English Rating, or U.S.A Rating, indicating the rating system you want to use (for details, see page 58).

   If you selected U.S.A. Rating, go to step 10.

   If you selected French Rating or English Rating, press Enter to block programs with the selected rating and any more mature ratings (– means unblocked and X means blocked). Then go to step 13.

10 Press Select ▼ or Select ▲ to select TV Rating or Movie Rating, indicating the type of U.S.A. rating you want to set up blocking for. Then press Enter.
11 If you selected TV Rating, you see these options:

All of the ratings are unblocked by default. Press Select ▼ or Select ▲ to select an Age Based rating. If desired, press Prev < or Next > to select a Content Based rating.

Press Enter to block programs with the selected rating and any more mature ratings (― means unblocked and X means blocked).

For details on the ratings, see page 58.

12 If you selected Movie Rating, you see these options:

All of the ratings are unblocked by default. Press Select ▼ or Select ▲ to select an Age Based rating. Then press Enter to block programs with the selected rating and any more mature ratings (― means unblocked and X means blocked).

For details on the ratings, see page 58.

13 Press Exit to return to the Lock menu or Menu to exit the menu system.
## V-Chip Ratings

Note
You can use the buttons on the TV or the remote for all menu operations.
The highlight moves to the first character in the password field:

4. Using the number buttons on the remote control, enter your password. You see the Lock menu:

5. Channel & Game Lock is highlighted. Press Prev < or Next > to select ON.

6. To lock a channel, press Select ▼ to highlight Channel Lock, then press Enter. You see the channel lock options:
7 Press Select ▼ or Select ▲ to highlight the channel number, then press Enter. The highlight moves to the Lock column.

8 Press Prev < or Next > to select Lock or unlock (-). Then press Enter.

9 Repeat steps 7 and 8 to lock any other channels, then press Exit to return to the Lock menu.

10 To lock an input source, press Select ▼ to highlight Game Lock, then press Enter. You see the input lock options:

![Input Lock Options](image)

11 Press Select ▼ or Select ▲ to highlight the input source, then press Enter. The highlight moves to the Lock column.

12 Press Prev < or Next > to select Lock or unlock (-). Then press Enter.

13 Repeat steps 11 and 12 to lock any other sources, then press Exit to return to the Lock menu.

**Accessing Blocked Programs, Movies, Channels, and Input Sources**

If you try to access a blocked program, movie, channel, or input source, the TV displays one of the screens shown below:

![Blocked Program or Movie Screen](image)

![Blocked Channel or Input Source Screen](image)
If you see one of these screens and you want to access the program, movie, channel, or input source, follow these steps:

1  Press Enter. You see a screen asking you to enter your password.

2  Enter your 4-digit password using the remote control number buttons.

   The program, movie, channel, or input source is unblocked and the blocking feature is turned off.

To set up blocking again, see page 55 (for V-Chip blocking) or page 59 (for channel and input source blocking).
Adjusting the Picture and Sound

You can make adjustments to your TV’s picture and sound quality, as described in these sections:

- “Adjusting the Picture Quality” on page 63
- “Selecting the Aspect Ratio” on page 66
- “Adjusting the Sound” on page 68

Adjusting the Picture Quality

Your TV offers three color modes (preset picture settings) that let you quickly adjust the picture for various lighting environments and image types. After selecting a suitable color mode, you can fine-tune the picture by adjusting its brightness, contrast, sharpness, saturation, tint, black level, color temperature, and screen position. You can also create two custom color modes that let you quickly adjust the picture for special viewing needs.

Color modes and picture quality adjustments are saved independently for each image source. Before changing settings, select the source you want to adjust (for example, HDTV tuner or DVD player) and display a picture. After you finish adjusting the settings for this source, switch to each additional source you’ll be viewing and make any desired adjustments.

1. Select the source you want to adjust and display a picture.
2. Press the Menu button on the TV panel or the remote control.
3. Press the Enter button. The Color Mode setting is highlighted.

Note
Depending on your input source, not all of the picture quality adjustments may be available.

Note
You can use the buttons on the TV or the remote for all menu operations.
**Changing the Color Mode**

1. Press Enter.

2. Press Select ▼ or Select ▲ to choose one of the following, then press Enter:

   - **Dynamic**
     Best for viewing movies in a brightly lit room. Colors appear warm and vibrant.

   - **Theater**
     For viewing movies in a darkened room. Colors appear true-to-life; more subtle than Dynamic mode.

   - **Natural**
     For viewing TV programs in ordinary room lighting.

   - **Custom1** and **Custom2**
     Adjust any of the other settings on the Video menu. The settings you select are used whenever you select Custom1 or Custom 2 using the Color button.

**Adjusting the Brightness, Contrast, Sharpness, Saturation, Tint, and Black Level**

1. Press Select ▼ or Select ▲ to highlight the setting, then press Enter.

   The menu disappears and the setting selector appears at the bottom of the screen.

   ![Current setting bar and default setting marker](image)

2. Press Prev < or Next > to adjust the setting. Press the buttons repeatedly or hold them down. The current setting bar moves and the setting number changes, but the default setting marker stays in position.

   The table below describes how the adjustments affect the settings:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Left side (press Prev &lt;)</th>
<th>Right side (press Next &gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brightness</td>
<td>Darker</td>
<td>Lighter</td>
</tr>
<tr>
<td>Contrast</td>
<td>Less contrast</td>
<td>More contrast</td>
</tr>
<tr>
<td>Sharpness</td>
<td>Less sharp</td>
<td>Sharper</td>
</tr>
<tr>
<td>Saturation</td>
<td>Less saturated colors</td>
<td>More saturated colors</td>
</tr>
<tr>
<td>Tint</td>
<td>More red tones</td>
<td>More green tones</td>
</tr>
<tr>
<td>Black Level</td>
<td>Reduces black level</td>
<td>Increases black level</td>
</tr>
</tbody>
</table>

3. Press Exit to return to the menus or press Menu to return to your image.
**Adjusting the Color Temperature**

1. Press Select ▼ or Select ▲ to highlight Color Temp.

2. Press Prev < or Next > to select one of these settings:

   - **Warm**
     Changes the overall tone to emphasize warm colors, such as gold and brown.

   - **Cool**
     Changes the overall tone to emphasize cool colors, such as blue and green.

   - **Medium**
     Balances the overall tone between warm and cool colors.

**Adjusting the Screen Position**

1. To adjust the position of your image on the screen, press Select ▼ or Select ▲ to highlight Position.

2. Press Enter.

   The menu disappears and a position selector appears on your image:

   ![Position Selector](image)

3. To position the image on the screen, press Select ▼, Select ▲, Prev <, or Next > as necessary. (This doesn’t affect the position of the menus.)

4. Press Exit when you’re finished.

**Switching the Component Video Image Quality Setting**

If you’re viewing 480p broadcasts (EDTV) through an HDTV tuner, you may want to switch the 480p Color Matrix option to the HDTV setting. When watching DVDs, select the DVD setting. Color and image quality is improved for devices connected through the TV’s Component Input ports.

1. Press the Menu button on the TV panel or the remote control.

2. To highlight the Setting menu tab, press Next >.

3. Press Enter. The Auto Aspect setting is highlighted.
4 Press Select ▼ to highlight the 480p Color Matrix setting.

![Menu System]

5 Press Prev < or Next > to select DVD (to optimize the quality of DVD images) or HDTV (to optimize the quality of EDTV images).

6 Press Exit to select another menu or press Menu to exit the menu system.

**Selecting the Aspect Ratio**

Most TV and video signals determine the size of the image on your screen. If your video source is connected to the TV’s Video or S-Video port, or if you’re watching a TV program through the TV’s built-in tuner, you can change the shape of the picture (called the aspect ratio) by pressing the Aspect button on the remote control.

Press the Aspect button repeatedly to select any one of the screen sizes shown below. The name of the aspect ratio appears in the upper left corner.

Normal is the default size of your video source, if it is in standard 4:3 broadcast ratio.

Full stretches a standard 4:3 ratio image to fit into your 16:9 ratio screen, stretching equally on all sides.
Wide stretches a standard 4:3 ratio image to fit into your 16:9 ratio screen, but the image size stretches increasingly more from the center to the sides.

Zoom enlarges the entire screen and cuts off some of the top and bottom for a closer view. Use Zoom when you’re watching movies broadcast in Letterbox format so they fit your screen.

Auto lets the TV select a suitable aspect ratio based on the signal it receives. If it can’t detect an aspect ratio from the signal, it displays the image using the default option selected in the menu system, as described below.

**Selecting the Default Aspect Ratio**

You can also use the menu system to select the aspect ratio the TV uses, in case it can’t detect the aspect ratio of the signal source:

1. Press the Menu button on the TV panel or the remote control.
2. To highlight the Setting menu tab, press Next >.
3. Press Enter. The Auto Aspect setting is highlighted.
4. Press the Prev < or Next > button to select the desired setting (Normal, Full, Wide, or Zoom).
5. Press Exit to select another menu or press Menu to exit the menu system.
Adjusting the Sound

To turn the TV speaker volume up or down, use the Vol. up and down buttons on the TV panel or remote control. To mute the sound, press the Mute button on the remote control.

To adjust the bass, treble, or balance of the sound from your TV speakers, you can change the Audio settings in the menu system. You can also turn off the TV speakers or the simulated surround sound feature.

1. Turn on a program that includes sound so you can check the results of your adjustments.
2. Press the Menu button on the TV panel or the remote control.
3. To highlight the Audio menu tab, press Next >.
4. Press Enter. The Bass setting is highlighted.
5. Press Select ▼ or Select ▲ to highlight the Bass, Treble, or Balance setting.
6. Press Enter. The menu disappears and a selector appears on the bottom of the screen.
7. To turn the simulated Surround feature or the Speaker on or off, press Prev < or Next > to toggle between the two options.
8. Press Exit to select another menu or press Menu to exit the menu system.
Using TV Features

Your TV provides various features to enhance your viewing experience, as described in these sections:

- “Printing What You See on the Screen” on page 69
- “Using Picture-Outside-Picture (POP)” on page 71
- “Using Channel Zapping” on page 73
- “Turning On Closed Caption Display” on page 75
- “Selecting an Alternate Audio Track or Language” on page 75
- “Automatically Shutting Off the TV” on page 76

Printing What You See on the Screen

You can “freeze” and print any video image that you see on your TV screen, such as a scene in a movie or sporting event on TV (except from sources connected to the DVI or PC port). Then you can print the image, if you like. Since you cannot save the image as a digital file, be sure to print it if it's something important that you want to keep.

1. While you’re viewing a program or movie, press the Freeze button on the TV panel or remote control. You see the Freeze window:

   ![](image)

   The program or movie keeps running on the right and the frozen image is shown on the left.

2. Freeze captures 3 different images taken 40 milliseconds apart so you can choose the one you like best.

   To view the 3 frozen images, press Prev. < or Next >.
(To freeze additional images, press the Freeze button again. The previously frozen images are erased.)

3. To enlarge the selected image, press Enter. To return to the Freeze window, press Exit.

4. To print the currently displayed image, press the Print button on the TV panel or remote control.

You see the Print Settings screen. (The current program or video image keeps running on the right.)

5. To select the number of printed copies you want, press Prev. < or Next >.

6. Press Enter. Your image is sent for printing.

During printing, the Printer light flashes. When printing is finished, the Printer light turns off.

7. To freeze another image for printing, repeat steps 1 through 6. You can send up to 3 frozen images for printing at one time.

8. To exit the Freeze menu, press the Exit button on the TV panel or remote control.

To monitor or cancel your print job, see page 91.

If you see a printing error message, select Yes to check for the problem. Then follow the on-screen instructions to solve the problem and continue printing. For additional help, see page 115.

When you’re finished printing, remove the borders from the edges of your photo by bending them back and forth and tearing them off.

Note
For most video images, freezing the display in the standard mode is sufficient. However, if you’re freezing an image with text (such as a recipe) or freezing an image from a DVD player that uses progressive output, you may get better results by changing the capture mode. See page 71 for instructions.

Note
Make sure you have paper loaded in the printer. For instructions, see page 86.

70 Using TV Features
Changing the Capture Settings
If you’re freezing images containing text or images from a DVD player that uses progressive output, you may get better results by changing the capture method, as described below.

1 Press the Freeze button.
2 Press Select ▼ to highlight Capture settings and press Enter. You see the Capture Settings screen:

3 To change the aspect ratio of the image you’re freezing, press Enter. Then press Select ▼ to highlight 16:9 and press Enter.
4 To change the capture method, press Select ▼ to highlight Capture Method and press Enter. Then press Select ▼ to highlight Progressive scan and press Enter.
5 When you’re finished, press Select ▼ to highlight Enter and press Enter.
6 Press Exit to return to normal viewing.
7 Press Freeze to freeze an image using the new settings, as described on page 69.

Using Picture-Outside-Picture (POP)
You can view images from two channels or sources at once using POP (Picture-Outside-Picture). This lets you check on a sporting event on TV while you watch a movie, for example. You can also watch TV, a DVD, or another source while you view photos from a digital camera card or an external CD.

You cannot display images in POP mode using equipment connected to input sources in these combinations:

- Component Inputs 1 and 2
- Component Inputs 1 or 2 and DVI or PC
- DVI and PC

The first video source you select for viewing in POP is the main source. You’ll be able to hear the audio only from this source, so select the source you’d like to listen to first.

1 Press the TV/Video button on the TV panel or remote control to select your main source (such as Video 1 for the DVD player). You’ll hear audio only from this source when you turn on POP.
2 Press the POP button on the remote control. The image from the first source appears on the left and the image from the second source appears on the right.

3 Press the TV/Video button to change the second source, if necessary.

Here’s how to select a new source in POP:

1 Press the Swap button on the remote control to choose the left or right source. A red outline appears around the current selection (always on the right).

2 Press the TV/Video button to change the source. If you’re using the photo viewer, press Photo Zoom + or - to select an image.

To resize the POP windows, press Swap to select the source, then press Next > to enlarge its window or Prev. < to reduce it. The other window is automatically resized to fit the screen.

Note

If you’re viewing the photo viewer in the right POP window, press Swap to select the other source before resizing the window. You can’t resize the photo viewer window directly in POP mode.

To exit POP, make sure the source you want to continue viewing is selected (if necessary, press Swap to select it). Then press POP twice or press Exit.
Using Channel Zapping

Channel zapping lets you get a quick look at programs broadcast on up to seven additional channels while you’re watching a TV program on an eighth channel. If you see a different channel that you want to watch, you can make it your main program.

To use channel zapping, you must be watching a cable or broadcast program received through the ANT 1 port (as shown on page 17). The factory-installed jumper cable that connects the ANT 2 and RF Output ports also has to be in place. Follow the steps below to turn off the ANT 2 port; this frees the necessary tuner.

**Turning Off the ANT 2 Port**

1. Make sure the jumper cable connecting the ANT 2 and RF Output ports is still installed on the back of your TV.

2. Press the **Menu** button on the TV panel or remote control. You see the Video menu.

3. Press **Next >** to highlight **Channel**, then press **Enter**.

4. Press **Select ▼** to highlight **Use of Ant. 2**, then press **Next >** to select **OFF**.

5. Press **Menu** to exit the menu system.

**Note**
You also need to turn off the V-Chip feature to use channel zapping. See page 55 for instructions.
**Zapping Channels**

The first channel you select in channel zapping is the main channel. You’ll be able to hear the audio only from this channel, so select the channel you’d like to listen to first.

1. Press the POP button on the remote control. You see the POP (Picture-Outside-Picture) screen display (two images at once).

2. Press the POP button again.

   You see the channel zapping window with your main channel on the left. The next 4 and previous 2 channels gradually fill windows on the right side of the screen with a frozen image from each channel. The main zapped channel is outlined in red at the top.

   ![Channel Zapping Diagram]

Here’s how to control the zapped channels:

- To view the zapped channel at the top as your main channel on the left, press the Swap button.

- To make the next zapped channel your main zapped channel, press Ch + or Select ▲. The channels rotate into position. When you see the channels you want, press Enter to stop channel rotation.

- To make the previous zapped channel your main zapped channel, press Ch – or Select ▼. The channels rotate into position. When you see the channels you want, press Enter to stop channel rotation.

To return to single channel viewing, press the POP or Exit button. (To view two channels at once, press POP again and follow the steps on page 71.)
Turning On Closed Caption Display

You can turn on closed caption display so you can read dialogue or station information transmitted along with certain programs. You can also turn on an option that displays closed captions whenever you press the Mute button on the remote control. That way, you won’t miss any dialogue when you’ve muted the sound.

1. Press the Menu button on the TV panel or the remote control.
2. To highlight the Setting menu tab, press Next >.
3. Press Enter. The Auto Aspect setting is highlighted.

![Menu screen with Closed Caption setting highlighted]

4. Press Select ▼ to highlight the Closed Caption setting.
5. Press Prev < or Next > to select one of the following options:
   - CC1, CC2, CC3, or CC4
     Displays closed captions of the program’s dialogue and sound effects.
   - TEXT1, TEXT2, TEXT3, or TEXT4
     Displays closed captions of the network and station information.
   - MUTE ON
     Displays closed captions whenever you press the Mute button on the remote control.
   - OFF
     Turns off closed captions.

6. Press Exit to select another menu or press Menu to exit the menu system.

Selecting an Alternate Audio Track or Language

When the channel you are viewing provides alternate audio tracks, you can select a different track to hear sound in Mono (the default is Stereo) or listen to a different language.

To select audio modes, press the MTS (Multichannel Television Stereo) button on the bottom of the remote control. The current mode appears in the upper left corner of the screen. Press the MTS button to change the mode as necessary.

Note
Not all the closed caption modes may be available for your program. Select CC1 or TEXT1 first to see if they work.
Automatically Shutting Off the TV

You can set up the TV to shut off automatically in case you fall asleep or want to control how long it stays on. You can set the TV to go into “sleep” mode after 30, 60, or 90 minutes or you can set it to turn off automatically after 30 minutes if it receives no signal input.

Putting the TV Into Sleep Mode

1. Press the Sleep button on the remote control. SLEEP OFF appears in the upper left corner of the screen.

2. Press the Sleep button again to select one of the following options:
   - SLEEP 30min
   - SLEEP 60min
   - SLEEP 90min

3. To check how much time is left before the TV enters sleep mode, press the Sleep button. If less than 3 minutes are left, the time display remains on the screen. Press Sleep again if you want to change the sleep time or turn off sleep mode.

4. After the selected time has elapsed, the TV screen goes blank and the Power light flashes orange. When the Power light stays lit orange, the TV is in sleep mode.

To turn the TV back on, press the Power button on the TV panel or remote control.

Setting Up Auto Shutdown

1. Press the Menu button on the TV panel or the remote control.

2. To highlight the Setting menu tab, press Next >.

3. Press Enter. The Auto Aspect setting is highlighted.

4. Press Select ▼ to highlight Auto Shutdown.

5. Press Prev. < or Next > to select ON.

6. Press Menu to exit the menu system. If there is no signal input after 30 minutes, the TV shuts off.
Viewing, Printing, and Saving Photos

You can use the digital photo card slots and printer built into your TV, and the external CD-R/RW drive, to view, print, and save digital photos, as described in these sections:

- “Viewing Photos on a Digital Photo Card or CD” below
- “Printing Photos” on page 86
- “Saving Photos to CD” on page 92

Viewing Photos on a Digital Photo Card or CD

You can view photos on your TV screen from a compatible digital photo card or a CD. You can also enlarge and rotate your photos and view them in a slide show.

- “Compatible Photos and File Structure (Photo Card)” below
- “Inserting a Photo Card” on page 78
- “Compatible Photos and File Structure (CD)” on page 80
- “Inserting a CD” on page 80
- “Enlarging and Rotating Photos” on page 83
- “Viewing a Slide Show” on page 84

Compatible Photos and File Structure (Photo Card)

Make sure your photo card uses the file structure and naming conventions defined in the DCF standard so the photo viewer can display your photos. Most digital cameras automatically format the files this way, but if you copy photos to the photo card using another device, you may need to set up this structure yourself.

- The folder structure must be:

  \D:\DCIM\ 
  or
  \D:\DCIM\123abcde\ 

  where \D:\ is the drive letter of your card reader, and it contains a DCIM folder. Your photos may be in the DCIM folder or in a folder beneath it. Any folders beneath the DCIM folder must be no more than 8 characters long, usually three numbers followed by up to 5 alphabetic characters, such as 100epson.

- The photo files must be in JPEG format and named:

  abcd1234.jpg

  where abcd1234 is a file name 8 characters long, beginning with 4 letters and ending with 4 numbers higher than 0000, such as epsn0001.jpg.
The photo files must contain a time stamp, so the slide show can display the files in time stamp order.

The photo files should contain thumbnail data, such as that included in Exif format JPEG files, to speed up display of the files in the photo viewer.

**Inserting a Photo Card**

1. Make sure the TV is turned on and the **Power** light is green and not flashing. Also make sure the **Card** and **Printer** lights are off.

2. Insert your photo card in the appropriate slot on the TV’s front panel. The **Card** light flashes orange as the TV reads the data on the card.

- **Note**
  
  The photo viewer cannot display, enlarge, or print TIF images. You see only the icon on the viewer screens for TIF images. You can write TIF images to a CD-R/RW and view them on your computer, however.

- **Note**
  
  Memory Stick PRO and PRO Duo cards are not supported at this time.
3 After a few seconds, the Photo screen appears. It displays the photos on your card and outlines the first one in gold:

![Selected photo]

4 If you inserted more than one photo card, the photos on the card you inserted first appear on the screen.

To switch to the photos on another card, press the 1 button. (Or press Menu, press Select ▼ or Select ▲ to highlight Photo Source, then press Enter.)

The Photo Source menu on the left is opened. Press Select ▼ or Select ▲ to highlight the card you want to view and press Enter.

5 Follow the instructions in these sections to view or print your photos:

- “Enlarging and Rotating Photos” on page 83
- “Viewing a Slide Show” on page 84
- “Printing Photos” on page 86

6 To exit the photo viewer, press the 5 button or press Menu, highlight Exit viewer, and press Enter.

7 Wait for the Card light to shine green or turn off, then remove your digital photo card(s).
Compatible Photos and File Structure (CD)

If you create a CD-R/RW of your photos using a computer, make sure that you use the file structure and naming conventions defined in the DCF standard so the photo viewer can display your photos. Your CD-R/RW must contain folders and files using the following structure and format:

- The folder structure must be:

  \( D: \text{nnnnnnnn} \)

  where \( D: \) is the drive letter of your CD drive and \( nnnnnnnn \) is a folder up to 8 characters long, such as \( \text{\textbackslash pictures} \). Any folders beneath the first level folder must also be no more than 8 characters long.

- The photo files must be named:

  \( nnnnnnnn.jpg \)

  where \( nnnnnnnn \) is a file name up to 8 characters long (consisting of alphanumeric characters and the - and _ symbols), such as photo001.jpg. The file must be in JPEG format.

  - The photo files must contain a time stamp, so the slide show can display the files in time stamp order.
  - The photo files should contain thumbnail data, such as that included in Exif format JPEG files, to speed up display of the files in the photo viewer.

You cannot use the TV to write photos to a CD-R/RW disc that was previously written to by a computer. You can view and print photos from these discs, but you cannot write new photos to them using your TV. This is because your TV and computer use different methods for writing files. When you want to write photos to a CD-R/RW, use a new, blank disc.

Inserting a CD

Before you view photos on a CD, make sure you’ve connected the external CD-R/RW drive that came with your TV. See page 15 for instructions.

Follow these steps to insert a CD-R/RW in your external CD-R/RW drive:

1. Make sure the TV is turned on and the Power light is green and not flashing.
2. Press the eject button on the drive to open the tray.
3 Place your CD-R/RW on the tray with the label side facing up. Make sure the disc lays flat in the tray.

4 Press the eject button again to close the tray.

5 Press the Photo View button on the TV panel or remote control. The Photo screen appears:

6 Press the 1 button. (Or press the Menu button, then press Enter.)

The Photo Source menu on the left is opened.
7 Press Select ▼ to highlight CD-R/RW (if necessary) and press Enter. You see the CD folders in the Photo View screen:

![CD folders in Photo View screen]

8 Select a folder by pressing the Prev. <, Next >, Select ▼, or Select ▲ button. Then press Enter. The folder opens and the photos within it appear in the Photo View screen:

![Folder with photos]

9 To view the photos in a different folder, press Exit. Then repeat step 8.

10 Follow the instructions in these sections to view or print your photos:
   - “Enlarging and Rotating Photos” on page 83
   - “Viewing a Slide Show” on page 84
   - “Printing Photos” on page 86

11 To exit the photo viewer, press the 5 button or press Menu, highlight Exit viewer, and press Enter. Press the eject button on the CD-R/RW drive to remove your disc.
**Enlarging and Rotating Photos**

After inserting your photo card or CD, you can enlarge the photo view. You can also zoom in on parts of the photo or rotate it so you can view it correctly. The rotated position is retained until you remove the card or CD. You can also print a photo after zooming in on it, effectively enlarging and cropping the printed photo.

1. If necessary, press **Menu** to move to the Photo View screen.

2. Select a photo by pressing the **Prev. <**, **Next >**, **Select ▼**, or **Select ▲** button.

3. Press the **Enter** button on the TV panel or remote control. The current photo is enlarged.

4. To rotate the photo, press the **Rotate** button on the remote control. Press it again to keep rotating.

5. To zoom into the photo, press the **Photo Zoom +** button. Press **Photo Zoom –** to zoom out. Use the **Prev. <**, **Next >**, **Select ▼**, and **Select ▲** buttons to select the part of the photo you want to view.

6. To select another photo, press **Exit** or use **Photo Zoom –** to zoom all the way out. Then use the **Prev. <**, **Next >**, **Select ▼**, or **Select ▲** button to select the next photo.

7. To return to normal photo viewing, press the **Exit** button on the TV panel or remote control.

**Note**

You can’t rotate an image when it is zoomed. Press **Photo Zoom –** or **Exit** to return the image to normal size, then press **Rotate**.
**Viewing a Slide Show**

You can view your photos automatically, for a few seconds each, by running a slide show. You can view all the photos or just selected ones.

1. Press the 2 button. (Or press Menu, press Select ▼ or Select ▲ to highlight Slide Show, and press Enter.)

   The Slide Show menu on the left of the screen is opened.

   ![Slide Show Menu Image]

   - **Caution**
     - Don’t remove a card from the slot when you’re viewing a slide show or you may damage the card. Wait until the slide show is finished and the Card light shines green (or is off) before removing the card.

   - **Note**
     - To move between the Menu and Slide Show sides of the screen, just press Menu.

2. To view all your photos in a slide show, press Enter to select View Slide Show.

   The first photo is enlarged and appears on the screen. It displays for 3 seconds, then the next photo is displayed.

3. To pause the slide show, press Enter. The || icon appears on the screen. To resume, press Enter again.

4. To end the slide show, press Exit.

**Selecting Photos for a Slide Show**

If you want to select your favorite photos for a slide show, follow these steps:

1. Press the 2 button to open the Slide Show menu.

2. Do one of the following:
   - To view most of the photos on your card, press Select ▼ to highlight Select all and press Enter. Your photos appear with checkboxes, indicating that they are selected for inclusion in the slideshow. You can deselect any photos you don’t want to view.
   - To view only a few photos on your card, press Select ▼ to highlight Cancel all and press Enter. None of your photos appear with checkboxes; you can select only those you want to view.

   - **Note**
     - If you choose the option for selecting photos individually right after inserting a card, all the photos are automatically selected.
3 To select or deselect a photo, press Prev. <, Next >, Select ▼, or Select ▲ to highlight it, then press Enter. (A checkmark appears if the photo is selected.)

4 When you’re ready to run the slide show, press the 2 button, then press Enter to select View Slide Show.

5 To end the slide show, press Exit.

Changing the Slide Show Settings

1 To change the way your slide show plays, press Exit to stop the slide show, if necessary. Then press the 2 button and select Advanced from the Slide Show menu. You see the Advanced Settings window:

2 Slides display at 3 second intervals. To lengthen the interval, press Next > to change the Transition speed setting from 3 to 10 seconds. (Press Select ▼ or Select ▲ to highlight Transition speed, if necessary.)

3 Slide shows play continuously until you stop them. To set them to play once and stop on their own, press Select ▼ to select Playback and press Enter. Press Select ▼ to select One cycle and press Enter.

4 When you’re finished, press Select ▼ to highlight OK and press Enter. You return to the menu screen.
**Printing Photos**

Once you’ve viewed your photos on a digital photo card or CD—or captured a video image using the Freeze button—follow the steps in these sections to print it.

- “Loading Paper” below
- “Selecting a Photo and Printing It” on page 89
- “Monitoring or Cancelling Your Print Jobs” on page 91

**Loading Paper**

You can purchase Photo Printing Packet number V13H151010 containing 50 sheets of paper and an ink cassette from your dealer or Epson. Call (800) 873-7766 or visit the Epson Store at www.epsonstore.com (U.S. sales only). In Canada, please call (800) 463-7766 for dealer referral.

Follow these steps to load up to 20 sheets of paper in the printer's paper cassette:

1. Press and release the printer cover latch to open the cover.
2 Grasp the paper cassette and pull it all the way out of the printer.

3 Open the paper cassette lid.
Caution
Don't remove the perforated borders on the paper before you print. The paper may jam or the printer may malfunction when it loads the paper.

Also, don’t touch the printable (shiny) surface of the paper. Oil from your hands may cause the paper to discolor.

4 You can load up to 20 sheets of paper. Position the paper with the shiny side face up, with the wide bordered edge facing the hinge of the cassette, and the narrow bordered end facing the open end of the cassette.

5 Close the cassette lid and press it until it clicks shut.
6 Slide the cassette into its slot, open end first. Push it in until it clicks into place.

7 Close the printer cover.

**Selecting a Photo and Printing It**

You can print one photo at a time from a digital photo card or CD-R/RW.

If you haven't yet inserted your photo card or CD, insert it. The photo viewer starts automatically. (If it doesn't start, press the Photo View button on the TV panel or remote control.)

1 Press Prev. <, Next >, Select ▼, or Select ▲ to highlight the photo you want to print.

---

**Caution**

Don't remove a card from the slot while you're printing or you may damage the card. Wait until printing is finished and the Card light shines green or turns off before removing the card.

**Note**

To rotate or crop the photo before printing, press the Enter button on the remote control. Rotate the image or zoom in on the desired portion of it, as needed (see page 83). The photo prints the way you see it on the screen.
2 Press the Print button on the TV panel or remote control. You see the Print Settings screen:

3 To print one copy of the photo, press Enter.

To print multiple copies, press Prev. < or Next > until the number in the Copies box is correct. Then press Enter.

After a moment, printing starts.

During printing, the Printer light flashes. When printing is finished, the Printer light turns off.

4 To print additional photos, repeat these steps. You can send multiple photos for printing at one time, up to 15 photos.

To monitor your print job or to cancel it, see the next section.

If you see a printing error message, select Yes to check for the problem. Then follow the on-screen instructions to solve the problem and continue printing. For additional help, see page 115.

Caution

Remove your printed photos before 10 of them have ejected from the printer so they don’t block additional photos from ejecting properly or cause a paper jam.

Don’t open the lock cover on the front of the printer while it is printing; this causes printing to stop.

Don’t remove your photo card while the printer is printing any photos from the card. Wait for all the queued print jobs to finish.

When you’re finished printing, remove the borders from the edges of your photo by bending them back and forth and tearing them off.
Monitoring or Cancelling Your Print Jobs

Once you send a photo for printing, you can monitor its progress or cancel it.

1. Press the 4 button. (Or press Menu, press Select ▼ to highlight Print Monitor, and press Enter.) The Print Monitor menu opens.

2. To monitor your print jobs, press Enter to choose Select Print Job. You see the Print Monitor screen:

The status of each print job is listed below the photo.
Cancelling an Individual Print Job

1. Press Prev. <, Next >, Select ▼, or Select ▲ to highlight the job and press Enter. You see the Printing or Waiting screen:

![Printing or Waiting screen]

2. Press Select ▲ to highlight Cancel and press Enter.

   (If the print job has finished before you could cancel it, press Select ▼ to highlight Exit and press Enter.)

3. Select Yes on the next screen. Your print job is cancelled.

Cancelling All Print Jobs

1. Press the 4 button. (Or press Menu, press Select ▼ to highlight Print Monitor, and press Enter.)

2. Press Select ▼ to highlight Cancel All Print Jobs and press Enter.

3. Select Yes on the next screen and press Enter. Your print jobs are cancelled.

Saving Photos to CD

Before you save photos on a CD, make sure you’ve connected the external CD-R/RW drive that came with your TV (see page 15) and turned on the drive.

You cannot write photos to a CD-R/RW disc that was previously written to by a computer. You can view and print photos from these discs, but you cannot write new photos to them using your TV. This is because your TV and computer use different methods for writing files. When you want to write photos to a CD-R/RW, use only a new, blank disc.

Make sure that your disc can be written to at 4X speed. Some high-speed discs don’t support 4X writing, so check your disc specifications before inserting it into the drive.

Follow the instructions in “Inserting a Photo Card” on page 78 to insert your digital photo card and open the photo viewer. Then follow the steps in the next section to insert a CD-R/RW in the drive and write the photos to it.

Note
You can’t write photos to a CD-R/RW while viewing photos on a CD-R/RW.
**Inserting a CD-R/RW**

1. Press the eject button on the drive to open the tray.

2. Place a new, blank CD-R/RW disc on the tray with the label side facing up. Make sure the disc lays flat in the tray.

3. Press the eject button again to close the tray.

**Writing All Photos to a CD-R/RW**

2. To write all of the photos on your digital photo card to the CD, press Enter to select Write to CD-R/RW.

3. You see a confirmation message. Select Yes and press Enter. (To cancel, select No and press Enter.)

**Caution**

Always use the eject button to open and close the tray. Pushing in the tray may damage the drive and your disc.

**Caution**

Don’t remove a card from the slot while you’re writing to CD-R/RW or you may damage the card or your CD-R/RW drive. Wait until writing is finished and the Card light shines green (or is off) before removing the card.

**Note**

The photo viewer cannot display, enlarge, or print TIF images. You see only the icon on the viewer screens for TIF images. You can write TIF images to a CD-R/RW and view them on your computer, however.
You see a writing confirmation message while your photos are written to the CD and the drive light flashes. When it’s finished, the CD tray opens and you see a completion message. Press Enter.

**Selecting Photos for Writing to CD-R/RW**

1. To select only some of your photos for writing to CD, press the 3 button to open the CD-R/RW Writer menu.

2. Do one of the following:
   - To write most of the photos to a CD, press `Select ▼` to highlight `Select all` and press Enter. All your photos appear with checkboxes, indicating they are selected. Deselect any photos you don’t want to write to the CD.
   - To write only a few photos to a CD, press `Select ▼` to highlight `Cancel all` and press Enter. Select only the photos you want to write to the CD.

3. When you’re ready to write the photos to the CD, press the 3 button, then press Enter to select `Write to CD-R/RW`.

4. You see a confirmation message. Select Yes and press Enter. (To cancel, select No and press Enter.)

5. You see a confirmation message while your photos are written to the CD. When it’s finished, the CD tray opens and you see a completion message. Press Enter.

**Viewing Photos Written to a CD-R/RW**

1. Press the eject button to re-insert the CD.

2. Press the 1 button to open the Photo Source menu.

4. Press `Prev. <`, `Next >`, `Select ▼`, or `Select ▲` to select a folder and press Enter. You see your photos. To view photos in another folder, press `Exit`; then repeat this step.

---

**Caution**

Don’t eject a disc, remove a digital photo card, or disconnect or turn off the CD-R/RW drive while you’re writing to a disc. You may damage your disc, card, or drive.
To keep your TV clean and operating correctly, or to move it to another location, follow the steps in these sections:

- “Cleaning the TV” below
- “Cleaning the Air Filter” below
- “Replacing the TV Projection Lamp” on page 97
- “Replacing the Printer Ink Cassette” on page 101
- “Moving or Transporting the TV” on page 107

**Cleaning the TV**

Remove dust from the screen using only a soft, lint-free cloth, such as a lens-cleaning cloth or a flannel or microfiber cloth. If necessary, moisten the cloth with water and diluted mild detergent.

Don’t press too hard as you clean the screen.

Clean the rest of the TV in the same way. Keep the panel covers closed as you clean and avoid dampening the connectors on the back.

**Cleaning the Air Filter**

You need to clean the TV’s air filter periodically—about once a month—to make sure the TV doesn’t overheat due to insufficient ventilation.

1. Pull out and remove the vent cover on the left side of the TV.
2 Use a small, hand-held vacuum to remove dust from both sides of the vent cover.

3 To replace the vent cover, insert the tabs on the back into the right side of the vent opening. Then press in the left side of the vent cover.
Replacing the TV Projection Lamp

The projection lamp in your TV is designed to last approximately 10,000 hours. Lamp life will vary depending on the mode selected, environmental conditions, and usage.

When it is time to replace the lamp, the TV displays a message on the screen.

The Lamp and Power lights on the front of the TV also indicate the status of the lamp.

You can purchase replacement lamp number V13H010R02 from your dealer or Epson. Call (800) 873-7766 or visit the Epson Store at www.epsonstore.com (U.S. sales only). In Canada, please call (800) 463-7766 for dealer referral.

Don’t replace the lamp unless you see a screen message or the Lamp and Power lights indicate lamp replacement, as described in the table below:

<table>
<thead>
<tr>
<th>Lamp light status</th>
<th>Power light status</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Orange flashing</td>
<td>Any state</td>
<td>Lamp replacement warning&lt;br&gt;&lt;br&gt;The projection lamp is almost burned out. You may also see a message on the screen.&lt;br&gt;&lt;br&gt;Obtain a replacement lamp, then follow the steps on page 98 to replace it.</td>
</tr>
<tr>
<td>Red</td>
<td>Red</td>
<td>Lamp error&lt;br&gt;&lt;br&gt;The projection lamp has burned out or has another problem. Obtain a replacement lamp, then follow the steps on page 98 to replace it.</td>
</tr>
<tr>
<td>Red flashing</td>
<td>Red</td>
<td>Lamp cooling or open cover error&lt;br&gt;&lt;br&gt;Make sure the lamp cover is closed completely. See the steps for accessing the cover on page 98.&lt;br&gt;&lt;br&gt;If the cover is closed, the lamp may not have cooled completely before the cover was opened. Wait a few minutes until the fan stops running, then unplug the TV, plug it back in, and press the Power button to turn on the TV. If the error persists, contact Epson as described on page 121.</td>
</tr>
</tbody>
</table>
**Lamp Replacement Precautions**

- Never touch the projection lamp immediately after turning off the TV or you could be burned. Wait at least 30 minutes after turning off the TV to let the lamp cool down completely.

- If the lamp has broken, handle the shards carefully to avoid injury.

- The used lamp contains mercury. Please consult your state and local regulations regarding disposal or recycling. Do not put the lamp in the trash.

- Install the new lamp securely to avoid an electrical short or other damage. Insert the lamp as described below, pushing it all the way into its slot. Tighten the screws to lock the lamp securely into place or the lamp will not come on.

- Do not touch the glass on the lamp with your bare hands. This can shorten the lamp life and obscure the projected image. Use a cloth or glove to handle the new lamp.

- Do not drop the replacement lamp or bump it against any surface; the lamp could be permanently damaged.

**Removing and Installing the Lamp**

1. Turn off the TV, unplug it from the electrical outlet, and let it cool down for at least 30 minutes.

2. Make sure you have a replacement lamp (part number: V13H010R02).

3. Grasp the right speaker cover on the bottom and side, pull it off, and set it aside.
4. On the front of the TV, push in the latch on the lamp cover, then pull off the cover and set it aside.

5. Use the screwdriver that came with the replacement lamp to loosen the two screws in the corners of the lamp housing. (You can’t remove the screws.)

6. Grasp the handle on the lamp and pull it out of the TV. Set it aside carefully.

Caution
Don’t loosen the two screws securing the handle to the lamp housing.
7  Position the new lamp as shown below. Then slide it carefully into the lamp slot until it stops.

8  Tighten the screws in the corners of the lamp housing.

9  Insert the tabs on the lamp cover into the right side of the opening. Then push in the left side to close the cover.
10 Align the speaker cover over the TV, making sure it fits into the holes. Push in on all sides of the cover.

11 Plug in the TV and press the Power button to turn it on.

If the Lamp and Power lights come on or flash red, you may not have installed the lamp correctly or completely closed the lamp cover. Check the cover and lamp installation, making sure you followed all the steps above.

**Replacing the Printer Ink Cassette**

Make sure you have a new ink cassette before you begin. You can purchase Photo Printing Packet number V13H151010 containing 50 sheets of paper and an ink cassette from your dealer or Epson. Call (800) 873-7766 or visit the Epson Store at www.epsonstore.com (U.S. sales only). In Canada, please call (800) 463-7766 for dealer referral.

**Sliding Out the Printer**

1 Press and release the printer cover latch to open the cover.
2. Flip down the printer lock cover.

3. Turn the printer lock counterclockwise to loosen it. It spins freely when it is unlocked.
4  Grasp the printer handle and pull the printer out as far as it goes.

Removing and Replacing the Ink Cassette

1  Pull open the ink cover on the side of the printer.
2 Lift up the ink cassette latch, then carefully pull out the cassette.

3 Remove the new cassette from its package. Then remove the red paper strip from the end.

4 Position the cassette as shown below. Then carefully align the cassette and its ribbon with the cassette slot.

**Caution**
If the ink ribbon catches in the opening, carefully adjust it so it doesn’t tear.

Plastic point should face up

Covered ends of the ribbon should face out
5 Once it is aligned, gently push the cassette into the slot until it clicks into place beneath the latch.

6 Flip up the ink cover and push it closed.

**Caution**
You must align the cassette and its ribbon with the slot or you will damage it when you slide it in.
**Sliding the Printer Back In**

1. Slide in the printer until it stops. If the printer catches on the opened printer door beneath it, gently hold the cover down and out of the way as you slide the printer in.

2. Push in on the printer lock as you turn it clockwise to tighten it. If it doesn’t tighten, push the printer in further and try again.

3. Flip up the lock cover.

4. Close the printer cover.

If you see any error messages when you print, you may need to reinstall the ink cassette. Carefully follow the steps in this section to reinstall it.

*Caution*

Make sure to lock the printer securely and close the lock cover completely or the printer won’t print.
Moving or Transporting the TV

When moving the TV, have two people grasp the TV as shown below. Lift the TV using the handles on the back and the top of the TV frame in the front.

WARNING

The TV is very heavy. Two people are required to lift or move the TV to avoid injury.

Never move the TV and its stand or other support together or the TV may fall and cause injury or be damaged.

Be careful not to drop the TV during transport; it may cause injury or the TV may be irreparably damaged.

When shipping the TV or transporting it for a long distance, pack it in its original box using the original packing materials.
Solving Problems

If you have a problem with the TV, read any error messages on the screen and check the lights on the front panel. Then follow the suggested solutions in these sections:

- “Responding to Screen Error Messages” below
- “Responding to TV Panel Light Indicators” on page 110
- “Basic Operation Problems” on page 112
- “Picture Problems” on page 112
- “Sound Problems” on page 113
- “TV Reception or Operation Problems” on page 114
- “Remote Control Problems” on page 114
- “Problems Viewing Photos from Cards or Discs” on page 115
- “Printing Problems” on page 115
- “Problems Saving Photos to a CD-R/RW” on page 121
- “Where to Get Help” on page 121

### Picture Problems

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>You don’t see a picture or hear any sound.</td>
<td>If you see the “Signal is not supported” message on the screen, check the signal output by the equipment you have connected. If you connected to a computer, it may be outputting an incorrect refresh rate.</td>
</tr>
<tr>
<td></td>
<td>If you see the No Signal message, check that your equipment is connected to the TV correctly and that you’ve put in a disc, tape, or other media, if necessary.</td>
</tr>
<tr>
<td></td>
<td>If there are no messages on the TV screen, see if the TV is still warming up (the Power light is flashing green). If so, wait until the light stays lit green.</td>
</tr>
<tr>
<td></td>
<td>Check the equipment you connected to make sure you selected the correct settings for sending images to the TV.</td>
</tr>
<tr>
<td></td>
<td>If you locked an input source from use using the menus, you need to unlock it. Press the Menu button on the TV panel or remote control. Then follow the steps on page 59 to unlock the input source.</td>
</tr>
<tr>
<td>You hear sound, but you don’t see a picture or the picture doesn’t look right.</td>
<td>Make sure the cables are connected to the TV and your equipment correctly. See page 16 for instructions. Check the equipment you connected to make sure you selected the correct settings for sending images to the TV.</td>
</tr>
<tr>
<td>The picture displays with stripes, ghosting, snow, or static.</td>
<td>Check your TV reception and connections. Weather conditions and interference from other nearby equipment may be affecting the picture quality. Turn off or relocate equipment such as hair dryers or microwave ovens, if possible.</td>
</tr>
</tbody>
</table>
Problem | Solution
--- | ---
The picture contains no color or incorrect colors. | Select a different Color Mode as described on page 63. Check your TV reception and connections. Weather conditions and interference from other nearby equipment may be affecting the picture quality. Turn off or relocate equipment such as hair dryers or microwave ovens, if possible. Check the equipment you connected to make sure you selected the correct settings for sending images to the TV. If the color is uneven in all the corners of the image, your TV may have an internal problem. Contact Epson for more information.

The picture is dark. | Press the Menu button on the TV panel or remote control. Then follow the steps on page 63 to adjust the brightness and other picture settings. The TV’s projection lamp may need to be replaced soon.

The screen has some bright spots or dark spots. | The TV’s LCD screen contains a 99.99% accurate dot display. However, some individual dots may appear bright or dark.

The picture is cut off. | Press the Aspect button on the remote control to change the TV’s aspect ratio, or the size and format of the display. Depending on the type of video you’re viewing, the ratio may cause part of the image to be cut off. If you’re zooming in on a DVD image, make sure the DVD player’s aspect ratio is set to 16:9. Then set the TV’s aspect ratio to FULL.

A black frame appears around the picture. | Closed captioning is turned on. To turn it off, follow the instructions on page 75.

---

**Sound Problems**

Problem | Solution
--- | ---
You see a picture, but you don’t hear any sound or the sound is flawed. | Press the Mute button on the remote control. If you had muted the sound, it should return. If the sound wasn’t muted, press the Volume up button on the TV panel or remote control to turn up the volume. If you’re using headphones, the speakers are automatically turned off while the headphones are connected. Make sure the audio cables you connected for the input source you’re trying to listen to are connected to the correct connectors. See page 16 for instructions. Press the Menu button on the TV panel or remote control. Check the Speaker setting on the Audio menu to make sure it isn’t turned off. See page 68 for instructions. If you’re using POP (picture-outside-picture), you only hear sound from the main picture source. To hear sound from the other source, press the Swap button on the remote control. Make sure the TV program, tape, disc, or other video medium actually includes sound. If you’re watching a dual language program with multiplex audio or a supplementary soundtrack, the program may not be dual language or the TV may not be set to SAP mode. Press the MTS button on the remote control until you see SAP in the upper left corner of the screen. Also check that your antenna or cable connections are secure.
### TV Reception or Operation Problems

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>TV reception is poor.</td>
<td>Check your antenna, cable, or digital or satellite receiver connections. See page 16 for details.</td>
</tr>
<tr>
<td></td>
<td>Weather conditions and interference from other nearby equipment may be affecting the picture quality. Turn off or relocate equipment such as hair dryers or microwave ovens, if possible.</td>
</tr>
<tr>
<td>The TV channels can’t be changed or selected.</td>
<td>When the TV is warming up or cooling down (the Power light is flashing), you can’t use the buttons. When the Power light stays lit green or orange, the buttons are operable.</td>
</tr>
<tr>
<td></td>
<td>You may have locked access to certain channels. Press the Menu button on the TV panel or remote control. Check the Channel Lock settings on the Lock menu as described on page 59.</td>
</tr>
<tr>
<td></td>
<td>You may have marked the channel to be skipped. Press the Menu button on the TV panel or remote control. Check the Manual Program settings on the Channel menu as described on page 49.</td>
</tr>
<tr>
<td>You can’t receive a digital broadcast.</td>
<td>You must connect the TV to a digital TV receiver to receive digital broadcasts.</td>
</tr>
</tbody>
</table>

### Remote Control Problems

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The remote control doesn’t work.</td>
<td>If you have problems with the remote control, press any button on the remote to check if the light on the top comes on.----------------</td>
</tr>
<tr>
<td></td>
<td>If the light comes on, move closer to the TV when you use the remote control and aim it at a more direct angle. Make sure the room lighting is not too bright and not shining directly on the remote control or the TV receiver window. Also clean the transmitter area on the top of the remote and the receiver window on the TV to see if that helps.</td>
</tr>
<tr>
<td></td>
<td>If the light doesn’t come on, make sure the batteries are inserted correctly and are working. If necessary, replace the batteries.</td>
</tr>
<tr>
<td></td>
<td>Make sure the equipment switch at the top of the remote control is set to the device you’re trying to control.</td>
</tr>
<tr>
<td></td>
<td>If you still have problems with the remote control, try the other suggestions on page 34.</td>
</tr>
</tbody>
</table>
Problems Viewing Photos from Cards or Discs

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>You insert a card or CD, but you don’t see your photos in the photo viewer screen.</td>
<td>Make sure your card or disc actually contains photos and that the files aren’t protected from viewing. Also make sure your whole photo card isn’t protected from viewing. Your card should be formatted for multi-session packet writing and your files contained in a DCF compatible folder structure. See page 78 and page 80 for details. Your photos may not be in the correct format. They should be JPEG (not progressive JPEG) files with resolutions between 120 × 120 to 4600 × 4600 pixels. If your files are in this format and resolution range, look at them on a computer to see if you can see them there. If you can’t, they are probably corrupted.</td>
</tr>
<tr>
<td>Your photos don’t look right when you view them in the photo viewer.</td>
<td>Make sure your photos are in JPEG (not progressive JPEG) format and are between 120 × 120 and 4600 × 4600 pixel resolution. Check the TV’s Color Mode, Brightness, and other picture quality settings (see page 63).</td>
</tr>
</tbody>
</table>

Printing Problems

Check the icon on the screen while printing. If you see a message about checking for errors, select Yes and follow the on-screen instructions to correct the problem.

<table>
<thead>
<tr>

<td>Printing is in progress.</td>
</tr>
</tbody>
</table>
If you don't see an error icon, check here for more printing solutions:

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
</table>
| You see an error message on the screen.                                | The printer may be out of paper or ink. Follow the on-screen instructions or the instructions on the sticker inside the printer door to replace paper or ink.  
If the on-screen message contains an error code, write down the code number and contact Epson as described on page 121. |
| You just replaced the ink cassette, but the printer is not working.    | Make sure the printer is locked and the lock cover is closed, as described on page 106, or the printer won’t print.                      |
| Nothing is printed.                                                    | If you removed a digital photo card or CD that contained the image you were printing, the TV cancels printing automatically. Insert the card or disc and print again. For detailed steps, see page 86.  
You may have set up too many photos to print at one time. You can send up to 15 photos or up to 3 captured images for printing at one time. Each photo or image must be 3MB or smaller. |
| A blank page prints.                                                    | Your ink cassette may need replacement. Obtain a Photo Printing Packet and replace the ink cassette as described on page 101.            |
| The printed colors are incorrect, smudged, faded, or streaked.         | Make sure you loaded the paper with the shiny side up. See page 86 for instructions.  
Your ink cassette may need replacement. Obtain a Photo Printing Packet and replace the ink cassette as described on page 101.  
Make sure your photo or image is 3MB or smaller in size.  
Printed colors can never exactly match the screen colors.                |
| Paper is jammed in the printer.                                        | If paper jams in the printer at the front, gently pull the paper out and try printing again.  
If paper is still jammed in the printer, you may need to clear the jam from the back of the printer. Follow the steps beginning on page 117 to clear the jam. |
Clearing a Paper Jam From the Back of the Printer

1. Press and release the printer cover latch to open the cover.

2. Flip down the printer lock cover.
3  Turn the printer lock counterclockwise to loosen it. It spins freely when it is unlocked.

4  Grasp the printer handle and pull the printer out as far as it goes.
5 Use a Phillips-head screwdriver with a shaft at least 6 inches long to remove the 2 screws securing the printer on each side, as shown below.

Remove only the screws at the base of the long plastic channels on the sides of the printer that secure it to the guiderails below.

6 Lift up the front of the printer slightly and slide it forward off of its guiderails until you can access the back of the printer.

7 Open the back door of the printer and pull out any paper jammed inside.

8 Close the back door.
9 Slide the printer back onto its guiderails and align the screws with the screw holes on each side.

10 Tighten the screws securely, but don't over-tighten them.

11 Slide in the printer until it stops. If the printer catches on the opened printer door beneath it, gently hold the cover down and out of the way as you slide the printer in.

12 Push in on the printer lock as you turn it clockwise to tighten it. If it doesn't tighten, push the printer in further and try again.

13 Flip up the lock cover.

**Caution**
Make sure to lock the printer securely and close the lock cover completely or the printer won't print.

14 Close the printer cover.
Problems Saving Photos to a CD-R/RW

When the CD-R/RW Writer can't write your photo to a disc, or has another detectable problem, the TV displays an error message on the screen. Follow the on-screen instructions to solve the problem. If replacing the disc doesn't solve the problem, make sure you didn't damage the drive by removing a disc, photo card, or cable, or by turning off the power while writing to a disc.

If you previously wrote photos or other data to a CD-R/RW using a computer or other source, you cannot write photos to it with the TV. See page 93 for guidelines on writing photos to a CD-R/RW with your TV.

Where to Get Help

Epson provides technical assistance through the World Wide Web 24 hours a day. From the Internet, you can reach Epson's product support page at http://support.epson.com. After selecting your product, you can access troubleshooting information, download product documentation, and receive technical advice through e-mail.

Telephone Support Services

To use the Epson PrivateLine℠ Support service, call (800) 637-7661 and enter the PIN on the Epson PrivateLine Support card included in your User's Guide kit. This is the fastest way of speaking to a live representative, and it's free. This service is available 6 AM to 6 PM, Pacific Time, Monday through Friday, for the duration of your warranty period.

You may also speak with a TV support specialist by dialing one of these numbers:

- U.S.: (562) 276-4394, 6 AM to 6 PM, Pacific Time, Monday through Friday
- Canada: (905) 709-3839, 6 AM to 6 PM, Pacific Time, Monday through Friday

Toll or long distance charges may apply.

Before you call, please have the following information ready:

- Product name (Epson Livingstation LS47P2 or LS57P2)
- Product serial number (located on the back left side of the TV; you may also have written it down on the Quick Setup sheet when you set up your TV)
- Description of the problem

You can purchase supplies and accessories from your dealer or from Epson. Call (800) 873-7766 or visit the Epson Store at www.epsonstore.com (U.S. sales only). In Canada, please call (800) 463-7766 for dealer referral.
## Specifications

### General

<table>

Epson America, Inc., Limited Warranty

What Is Covered: Epson America, Inc. (“Epson”) warrants to the original consumer purchaser that the Epson rear projection television product (including any accessories) enclosed with this limited warranty statement, if purchased new and delivered in the United States or Canada, conforms to the manufacturer’s specifications and will be free from defects in workmanship and materials for a period of two (2) years from the date of original purchase, except that the warranty period for the included lamp is 90 days from the date of original purchase. For warranty service, you must provide a sales receipt or bill of sale as proof of the date of purchase.

What Epson Will Do to Correct Problems: Should your Epson Product require service during the warranty period, you must contact Epson for service diagnostic and repair procedures. For the television unit, Epson will provide on site service to repair or replace the Product, at Epson’s option, without charge for parts or labor. On-site service may not be available in all areas or all instances. If on-site service is not available or cannot be accomplished, Epson has the option to perform repairs at an Epson authorized repair center, in which case Epson will arrange and pay for shipping to and from the repair location. In such case it may be necessary for Epson to remove the television unit and return it after the repair. For included accessories (e.g., Printer, CD-RW drive, Remote Control, ATSC Tuner), Epson will exchange the defective unit as needed without charge for parts or labor. With an exchange of a defective unit, Epson will ship a replacement unit to you, freight prepaid, to an address in the U.S or Canada. Shipments to other locations (Puerto Rico and U.S. Possessions) will be made freight collect. You are responsible for securely packaging the defective unit and returning it to Epson within five (5) working days of receipt of the replacement. Epson requires a debit or credit card number to secure the cost of the replacement unit in the event that you fail to return the defective one. In all cases where warranty service involves the replacement of the product or of a part, the item replaced becomes Epson property. The exchanged product or part may be new or previously repaired to the Epson standard of quality, or, at Epson’s option, may be another model of like kind and quality. Replacement products and parts assume the remaining warranty period of the product covered by this limited warranty.

What This Warranty Does Not Cover: This warranty covers only normal use of the Product in the United States and Canada. 24-hour-per-day use of this product causes unusual strain and is not considered normal use. This warranty does not cover consumables (e.g., fuses or batteries), other than the 90 day warranty as to the lamp. This warranty does not apply to used, refurbished or reconditioned products and is not transferable. The warranty does not cover set up adjustments or signal reception problems; it does not cover damage due to misuse, abuse or neglect or due to disasters such as fire, water or lightning, or due to electrical currents or surges; it does not cover failure to properly maintain the Product, improper shipping or installation, using the product other than as intended, interaction with non-Epson products, or service or modification of the Product other than by an Epson Authorized Servicer. The warranty shall be invalid if the Epson label, rating label or serial number has been altered or removed. If a claimed defect cannot be identified or reproduced in service, or you fail to make the Product available for a service call, you will be held responsible for costs incurred.
THIS WARRANTY AND REMEDY ARE EXCLUSIVE AND IN LIEU OF ALL OTHER EXPRESS OR IMPLIED WARRANTIES INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. SOME LAWS DO NOT ALLOW THE EXCLUSION OF IMPLIED WARRANTIES. IF THESE LAWS APPLY, THEN ALL EXPRESS AND IMPLIED WARRANTIES ARE LIMITED TO THE WARRANTY PERIOD IDENTIFIED ABOVE. UNLESS STATED HEREIN, ANY STATEMENTS OR REPRESENTATIONS MADE BY ANY OTHER PERSON OR FIRM ARE VOID. EXCEPT AS PROVIDED IN THIS WRITTEN WARRANTY, NEITHER EPSON AMERICA, INC. NOR ITS AFFILIATES SHALL BE LIABLE FOR ANY LOSS, INCONVENIENCE, OR DAMAGE, INCLUDING DIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES, RESULTING FROM THE USE OR INABILITY TO USE THE EPSON PRODUCT, OR FROM LOSS DATA, WHETHER RESULTING FROM BREACH OF WARRANTY OR ANY OTHER LEGAL THEORY. IF THE REMEDY ABOVE FAILS, EPSON’S ENTIRE LIABILITY SHALL BE LIMITED TO A REFUND OF THE PRICE PAID FOR THE EPSON PRODUCT COVERED BY THIS LIMITED WARRANTY.

In Canada, warranties include both warranties and conditions.

Some jurisdictions do not allow limitations on how long an implied warranty lasts, and some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitations and exclusions may not apply to you. This warranty gives you specific legal rights, and you may also have other rights, which vary from jurisdiction to jurisdiction.

For warranty support, call the Epson Connection℠ at (800) 637-7661 + PIN or (562) 276-4394 in the U.S. and (905) 709-3839 in Canada, or write to: Epson America, Inc., P.O. Box 93012, Long Beach, CA 90809-3012.

**ENERGY STAR Compliance**

As an ENERGY STAR Partner, Epson has determined that this product meets the ENERGY STAR guidelines for energy efficiency.

**Note on Closed Captioning**

This television receiver provides display of television closed captioning in accordance with §15.119 of the FCC rules.

**Note on TV Use**

Use of this television receiver for other than private viewing of programs broadcast on UHF or VHF, or transmitted by cable or satellite companies, for the use of the general public may require authorization from the broadcast/cable/satellite company and/or program owner.
FCC Compliance Statement

For United States Users

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio or television reception. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio and television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

WARNING

The connection of a non-shielded equipment interface cable to this equipment will invalidate the FCC Certification of this device and may cause interference levels which exceed the limits established by the FCC for this equipment. It is the responsibility of the user to obtain and use a shielded equipment interface cable with this device. If this equipment has more than one interface connector, do not leave cables connected to unused interfaces. Changes or modifications not expressly approved by the manufacturer could void the user’s authority to operate the equipment.

For Canadian Users

This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.
