FCC Compliance Statement
For United States Users

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio or television reception. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio and television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures.

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

WARNING

The connection of a non-shielded equipment interface cable to this equipment will invalidate the FCC Certification of this device and may cause interference levels which exceed the limits established by the FCC for this equipment. It is the responsibility of the user to obtain and use a shielded equipment interface cable with this device. If this equipment has more than one interface connector, do not leave cables connected to unused interfaces. Changes or modifications not expressly approved by the manufacturer could void the user’s authority to operate the equipment.

For Canadian Users

This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

Cet appareil numérique de la classe B respecte toutes les exigences du Règlement sur le matériel brouilleur du Canada.

The printed image is faint or has gaps 6-5
The printed image is blurry or smeared 6-5
Photographic images look grainy or rough 6-6
Color documents print in black and white 6-6
Solving Printing Problems 6-6
All lights are off 6-6
Only the power light is on, but nothing prints  6-7
The paper out light is flashing or on  6-7
A black or color ink out light is flashing or on  6-8
The and lights are flashing  6-8
All the lights are flashing  6-8
The printer has finished charging the ink cartridge, but the power light is still flashing  6-8
The printer software installed with Windows 3.1 does not work correctly after you upgrade to Windows 95  6-9
After you install your printing software, you see the Windows 95 New Hardware found window  6-9
You see a spooling error message (Windows)  6-9
In Windows 95, the Status Monitor box does not appear with the Despooler  6-9
You see a type 11 or memory error message (Macintosh)  6-9
A portion of your image doesn't print (Macintosh)  6-10
Printing is too slow  6-10
Your printer switches to the modem port or won't confirm on the printer port (Macintosh)  6-10
Your printer icon doesn't appear in the Chooser (Macintosh)  6-11
When you select your printer in the Chooser, you see a message that it can't be used  6-11
You get a type 39 error on the Macintosh  6-11

Fixing Paper Problems  6-11
Paper doesn't feed  6-12
Multiple pages feed at the same time  6-12
Paper jams inside the printer  6-12
Paper doesn't eject fully or is wrinkled  6-13

Solving Miscellaneous Printout Problems  6-13
Characters are incorrect or garbled  6-13
The margins are incorrect  6-14
The image is inverted as if viewed in a mirror  6-14
The printer prints blank pages  6-14
Something on the page is wrong or missing  6-15
Introduction

Your EPSON Stylus® Photo printer is the ideal output device for full-color layout proofs, digital photography, photo editing—or any imaging project you create on your computer. The printer includes the following features:

- Exclusive Micro Piezo ink jet technology for smaller, cleaner dots
- Six-color printing for photo reproduction quality on plain paper or a variety of special media
- Fastest color print speeds in its class
- Compatibility with Microsoft® Windows® and Macintosh®
- PhotoEnhance for optimizing the contrast, saturation, and brightness of your pictures at the touch of a button
- Resolutions up to 720 × 720 dpi
- EPSON Digital Darkroom software, including Live Picture® (Macintosh), LivePix™ (Windows 95), and an outstanding collection of CD-ROM images
Windows System Requirements

To use your printer and its software with a PC, your system should have:

- An IBM® compatible PC with at least a 486 DX2/66 MHz or faster processor
- DOS, Windows 3.1x, Windows for Workgroups 3.11, or Windows 95
- At least 16MB of RAM
- At least 50MB of free hard disk space for storing images
- VGA, Super VGA, or better display adapter and monitor
- Double-speed CD-ROM drive (quad-speed or faster recommended)
- A shielded, twisted-pair parallel cable (6 to 10 feet long) to connect your computer to the printer; the cable must have a D-SUB, 25-pin, male connector for your computer and a 36-pin, Centronics® compatible connector for the printer.

Macintosh System Requirements

To use your printer and its software with a Macintosh, your system should have:

- Any Macintosh or Power Macintosh model except the Macintosh Classic, Macintosh +, Macintosh 512, or PowerBook™ 100
- System 7.1 or later
- At least 16MB of built-in RAM
- At least 50MB of free hard disk space for storing images
- VGA (8-bit, 640 × 480) or better display adapter and monitor

Note: If you don't have a CD-ROM drive, you can get the printer driver software on diskettes or download it through your modem. Contact EPSON as described on pages 4 and 5.
How To Use Your Manuals

To set up your printer, see the Quick Setup guide. This User's Guide contains the following information:

Chapter 1 covers the basics of printing with Windows or Macintosh.

Chapter 2 tells you how to print special projects with custom settings for print quality and color management.

Chapter 3 gives guidelines for selecting and using the right paper or other media for your print job and instructions for printing panoramic images.

Chapter 4 explains how to manage print jobs, check printer status, and set up your PC system for network printing.

Chapter 5 gives instructions for replacing ink cartridges, cleaning and aligning the print heads, and cleaning and transporting the printer.

Chapter 6 provides solutions for any problems you may have.

The Appendix provides the technical details on your printer, ink cartridges, and EPSON media.

A Glossary and an Index are included at the end of the book.
Warnings, Cautions, Notes, and Tips

You’ll find this information throughout your manual:

**Warnings** must be followed carefully to avoid bodily injury.

**Cautions** must be observed to avoid damage to your equipment.

**Notes** contain important information about your printer.

**Tips** contain additional hints for great printing.

Where to Get Help

EPSON provides customer support and service through a network of authorized EPSON Customer Care Centers. Dial *(800) 922-8911* for the nearest location or the following services:

- Fax-on-Demand access to EPSON’s technical information library
- Literature on current and new products
- The location of your nearest Authorized EPSON Reseller or Customer Care Center
- Technical information on the installation, configuration, and operation of EPSON products
- Customer relations

For answers to commonly asked questions about EPSON products 24 hours a day, seven days a week, call EPSON Sound Advice at *(800) 442-2110*. 
You can purchase ink cartridges, paper, manuals, accessories, and parts from EPSON Accessories at (800) 873-7766 (U.S. sales only). In Canada, please call (800) 873-7766 for dealer referral.

If you need help using software with an EPSON product, see the documentation for that program for technical support information.

Electronic Support Services

You can access helpful tips, specifications, DIP switch or jumper settings, drivers, FAQs, sample files, application notes, and EPSON product bulletins 24 hours a day, seven days a week, using a modem and one of the online services below.

World Wide Web

From the Internet, you can reach EPSON's Home Page at http://www.epson.com.

EPSON Internet FTP Site

If you have Internet FTP capability, use your Web browser (or other software for FTP downloading) to log onto ftp.epson.com with the user name anonymous and your e-mail address as the password.

EPSON Download Service

You can call the EPSON Download Service at (800) 442-2007. Set your communications software to 8 data bits, 1 stop bit, no parity. Modem speed can be up to 28.8 Kbps.
EPSON Fax-on-Demand Service

You can access EPSON's technical information library by calling (800) 442-2110 or (800) 922-8911 and selecting the appropriate phone option. You must provide a return fax number to use Fax-on-Demand.

EPSON Forum on CompuServe

Members of CompuServe® can type GO EPSON at the menu prompt to reach CompuServe's Epson America Forum. As an owner of an EPSON product, you are eligible for a free introductory CompuServe membership, which entitles you to an introductory credit and your own user ID and password. To take advantage of this offer in the U.S. or Canada, call (800) 848-8199 and ask for representative #529.

ENERGY STAR Compliance

As an ENERGY STAR Partner, EPSON has determined that this product meets the ENERGY STAR guidelines for energy efficiency.

The EPA ENERGY STAR Office Equipment program is a voluntary partnership with the computer and office equipment industry to promote the introduction of energy-efficient personal computers, monitors, printers, fax machines, and copiers in an effort to reduce air pollution caused by power generation.
Energy-saving Tips

Here are a few tips you can use to be even more energy-wise:

➢ If your monitor isn’t ENERGY STAR compliant, turn it off when you’re not using it.
➢ Turn off your computer, printer, and monitor each day when you are done using them.
➢ Use the print preview option in your software so you can catch errors before you print something.
➢ Send e-mail rather than distributing memos. Not only is this faster, but you’ll save paper and storage space too.

Important Safety Instructions

Before using your printer, read the following safety instructions to make sure you use the printer safely and effectively.

➢ Turn off and unplug the printer before cleaning. Clean with a damp cloth only. Do not spill liquid on the printer.
➢ Do not place the printer on an unstable surface or near a radiator or heating vent.
➢ Do not block or cover the openings in the printer’s cabinet or insert objects through the slots.
➢ Use only the type of power source indicated on the printer’s label.
➢ Connect all equipment to properly grounded power outlets. Avoid using outlets on the same circuit as photocopiers or air control systems that regularly switch on and off.
➢ Place the printer near a wall outlet where the plug can be easily unplugged.

Placez l’imprimante près d’une prise de contacte où la fiche peut être débranchée facilement.
Introduction

- Do not let the power cord become damaged or frayed.
- If you use an extension cord with the printer, make sure the total ampere rating of the devices plugged into the extension cord does not exceed the cord’s ampere rating. Also, make sure the total of all devices plugged into the wall outlet does not exceed 15 amperes.
- Except as specifically explained in this User’s Guide, do not attempt to service the printer yourself.
- Unplug the printer and refer servicing to qualified service personnel under the following conditions:
  - If the power cord or plug is damaged;
  - If liquid has entered the printer;
  - If the printer has been dropped or the cabinet damaged;
  - If the printer does not operate normally or exhibits a distinct change in performance. Adjust only those controls that are covered by the operating instructions.

Even if you are familiar with other types of printers, be sure to read through the following list of precautions before operating your ink jet printer:

- Do not put your hand inside the printer or touch the cartridge during printing.
- Under normal circumstances, ink will not come out of the cartridge. If it does get on your skin, wash it off with soap and water. If it gets in your eyes, flush them immediately with water.
- Keep ink cartridges out of the reach of children.
- Do not dismantle the ink cartridges or try to refill them. This could result in damage to the print head.
- Once you install an ink cartridge, do not open the clamp or remove the cartridge except to replace it with a new one. The cartridge may become unusable otherwise.
- Install the ink cartridge immediately after you remove it from its package. Leaving the cartridge unpacked for a long time before use may result in reduced print quality.
Introduction

- Do not use an ink cartridge beyond the date printed on the cartridge carton. For best results, use up the ink cartridges within six months of installing them.
- Do not shake an ink cartridge; this can cause leakage.
- Always turn the printer off using the power button. When this button is pressed, the power light flashes briefly then goes out. Do not unplug the printer or turn off the power to the outlet until the power light is off.
- Before transporting the printer, make sure the print head is capped in the far right position and the ink cartridges are in place.
1 Basic Printing

It's easy to print with your new EPSON Stylus Photo. First you have to set up your printer, following the instructions in the Quick Setup guide. Then install the printer driver software on your Digital Darkroom CD. Read this chapter to find out about the following:

- Printing from Windows
- Printing from a Macintosh
- Choosing paper and other media
- What to do when the printer lights flash

Printing from Windows

When you want to print from your Windows application, you click the print icon or choose Print from the File menu. You can then choose which pages to print, the number of copies, and other options. The settings that describe your print job—whether you want to use full color or black ink only, for example—are part of your printer driver software.

The following sections tell you how to set printer options from Windows applications, how to change the default printer settings, and how to check your printer's status.

Note:
If you need driver software for Windows NT and it's not included in your box, you can download it from EPSON. See page 5 in the Introduction for more information.
Setting Printer Options from Windows Applications

This section describes the preferences you’ll need to set for all your everyday printouts. See Chapter 2 for information about special settings like PhotoEnhance.

Follow these steps to check printer settings from your graphics application or other Windows software:

1. Choose Print or Print Setup from the File menu. You see a printing dialog box.
   
   If you choose Print, you first see a Print dialog box that contains the settings you change most often, including the number of copies and the pages you want printed.

2. Make sure your EPSON Stylus Photo printer is selected, and then click the Printer, Setup, Properties, or Options button. (You may have to click a combination of these buttons.) You see a dialog box like the following:

For more information about printer settings, click the Help button. In Windows 95, you can right-click any item on the screen and then click What’s This?
3. Make sure the Mode option is set to Automatic. The printer software determines the best settings for your print job. This is the easiest way to get good printing results on all types of paper.

4. Choose the Media Type you want to print on from the following list (you may need to scroll through the list). If you are not sure which setting to select, refer to the table on page 3-2.
   - Plain paper
   - 360 dpi Ink Jet Paper
   - Photo Quality Ink Jet Paper
   - Photo Quality Glossy Paper
   - Photo Quality Glossy Film
   - Ink Jet Transparencies

   The type of media you choose determines the print quality or resolution you can use.

5. Choose Color or Black ink. If you’re printing grayscale images, choose Black for faster output.

6. Set the slider to Quality or Speed. This lets you choose between the highest resolution or the fastest printing for the media you’re using. (The slider is not available for certain media types.)

7. If necessary, click the Paper tab and choose your paper size, number of copies, and orientation. If your software application lets you control these settings, you don’t need to use the Paper tab.

8. Click OK when you’re finished checking your settings.

9. In the printing dialog box, click Close, OK or Print. You may need to click a combination of these buttons.

While your document is printing, the EPSON Despooler dialog box appears, showing the printing progress and the status of your printer. (See page 1-5 for more information.)
Setting Default Printer Options

When you change printer settings through your software application, the settings apply only to the application you're using. If you want to adjust the default settings for all your Windows applications, you can access the dialog box through the Windows 95 Settings option or the Windows 3.1 Control Panel.

Make sure all your software applications are closed before you start. If not, you'll have to close and then reopen them to have the new default settings take effect.

Setting Default Options in Windows 95

Follow these steps:

1. Click Start, point to Settings, and then point to Printers.
2. Right-click the EPSON Stylus Photo icon.
3. Select Properties. Then click the Main tab.

You see the Main printer settings dialog box, as shown on page 1-2. Any changes you make will become the default settings for all your applications and documents.

Setting Default Options in Windows 3.1

Follow these steps:

1. Double-click the Control Panel icon in the Main group.
2. Double-click the Printers icon.
3. Select EPSON Stylus Photo from the list of printers and click Setup.

You see the Main printer settings dialog box, as shown on page 1-2. Any changes you make will become the default settings for all your applications and documents.

Note:
Some application settings override printer settings (such as Paper Size or Orientation), so it's a good idea to check the settings in your application before you print.
Checking Printer Status

While your document is printing, the EPSON Despooler dialog box appears on your screen:

This dialog box shows the progress of your print job and the status of your printer. If you run out of paper while printing, for example, the Despooler warns you. You can use the buttons to cancel, pause, or restart your print job.

The Status Monitor at the bottom of the dialog box shows how much ink is left in your printer, along with these status icons:

- The Status Monitor is checking the printer’s status.
- An error has occurred. Check your printer or see Chapter 6 for troubleshooting information.
- The printer is ready to print.
- The printer is currently printing.
- The ink level is low or empty; check the Ink Out light on the control panel and replace the cartridge if necessary.

Note:
The Status Monitor appears only if you’re using Windows 95 and you’re not printing over a network.
Printing from a Macintosh

When you set up a new printer for your Macintosh, you need to check the page setup for documents in each application you use. You can then click the print icon or choose Print from the File menu. You see a dialog box that lets you choose the settings that describe your print job.

This section describes the preferences you’ll need to set for all your everyday printouts. See Chapter 2 for information about special settings like PhotoEnhance.

Follow these steps to check printer settings from your word processor or other Macintosh application:

1. Choose Page Setup from the File menu. You see the Page Setup dialog box.
2. Choose your paper size and other page setup options and click OK.
3. Choose Print from the File menu or click the print icon in your application. You see a dialog box like the following:

   ![Print Dialog Box]

   Click for more information about printer settings
   Click to see list of media types

4. Choose the number of copies and indicate which pages you want to print.

Note: On the Macintosh, printer settings are saved with your document, but you can’t save them from one application to another. You’ll have to check your settings each time you print from a new application. If you want to reuse settings, you can create document templates for your favorite applications.
5. Make sure the Mode option is set to Automatic. The printer software determines the best settings for your print job. This is the easiest way to get good printing results on all types of paper.

6. Choose the Media Type you want to print on from the following list. If you are not sure which setting to select, refer to the table on page 3-2.
   - Plain Paper
   - 360 dpi Ink Jet Paper
   - Photo Quality Ink Jet Paper
   - Photo Quality Glossy Paper
   - Photo Quality Glossy Film
   - Ink Jet Transparencies

   The type of media you choose determines the print quality or resolution you can use.

7. Choose Color or Black ink. If you’re printing grayscale images, choose Black for faster output.

8. Set the slider to Quality or Speed. This lets you choose between the highest resolution or fastest printing for the media you’re using. (The slider is not available for certain media types.)

9. Click Print when you’re finished checking your settings.

   If you chose background printing when you set up your printer, you can continue working while your document is printing. See “Using Monitor2” in Chapter 4.
Choosing Paper and Other Media

You can use most types of paper with your printer, but you'll get better results with specially designed EPSON ink jet paper or other media. Following is a list of the media available for EPSON ink jet printers. See Chapter 3 for more information on using special paper and other materials.

To order EPSON papers and other media, contact your dealer or call EPSON Accessories at (800) 873-7766 (U.S. sales only). In Canada, please call (800) 873-7766 for dealer referral.
What To Do When the Printer Lights Flash

The four lights on your printer's control panel show the printer's status and alert you to problems like paper jams.

- When the paper light comes on, your paper ran out or is incorrectly loaded. Load paper in the feeder and then press the load/eject button.
- When an ink light comes on, you need to replace the ink cartridge. See Chapter 5 for instructions.
- When an ink light flashes, your ink supply is low. Make sure you have a replacement cartridge.
- When the paper light flashes and the ink out lights are on, you have a paper jam. Turn off the printer and gently pull out all jammed paper. Then press the load/eject button.
- The power light is on when the printer is on. The power light flashes when the printer is receiving a print job or performing a maintenance operation.
- When the power and paper lights flash and the ink out lights are on, your printer has a carriage error. Press the button twice to reset the printer. See Chapter 6 for more information.
- When all the lights flash, your printer may have an internal error. See Chapter 6 for more information.
When your photographs or other projects have special printing requirements, you can use the custom settings in your EPSON Stylus Photo software. You can choose predefined settings like PhotoEnhance or adjust individual options like brightness, contrast, saturation, and halftoning. For professional-quality color accuracy, you can use Image Color Matching (ICM) under Windows 95 or ColorSync™ on the Macintosh.

This chapter includes the following information:

- Using predefined advanced settings
- Customizing print quality and special effects
- Customizing color settings
- Using ColorSync on the Macintosh
- Saving custom settings

**Using Predefined Advanced Settings**

Predefined settings provide an easy way to enhance your photos and fine-tune your printer's operation. Follow these steps to print with predefined settings:

1. Create your image or project in your application software.

2. Access the Main printer settings dialog box as described on page 1-2 (Windows) or page 1-6 (Macintosh).
Custom Printing

You see one of the following dialog boxes:

Note: When you use advanced settings, the Quality/Speed slider disappears.
3. Select Color or Black Ink.

4. Click Advanced, and then Custom Settings. You see the list of project types.

5. Follow these guidelines to choose the right setting for your project:
   - **Photo**
     For printing scanned photographs with increased contrast.
   - **Text/Graph**
     For printing graphics-intensive documents like presentation pages with charts and graphs. Intensifies colors and lightens the midtones and highlights.
   - **PhotoEnhance**
     Produces sharper images and more vivid colors by automatically adjusting the contrast, saturation, and brightness. Corrects for under- and over-exposure of the original image.
   - **Text**
     For faster printing of text-only documents on plain paper.
   - **Economy**
     For rough drafts of text only, on plain paper. Saves ink.
   - **ICM (Windows 95 only)**
     Automatically adjusts printout colors to match the colors on your screen.
   - **ColorSync (Macintosh only)**
     Automatically adjusts printout colors to match the colors on your screen. For more information, see page 2-9.

6. Choose the Media Type you want to print on. (If you’re not sure which setting to select, refer to the table on page 3-2.) The available media are limited by the project you choose. For example, you can’t use plain paper or transparencies with the ICM or ColorSync settings.
Custom Printing

7. If you’re printing on envelopes, EPSON Photo Paper, or other special-size media, make sure you select the correct paper size. If you’re using Windows, click the Paper tab. If you’re using a Macintosh, choose Page Setup from the file menu of your application. See Chapter 3 for more information about printing on special media.

8. Click OK or Print. If you’re using Windows, click any other buttons that your application uses for printing.

Customizing Print Quality and Special Effects

If you need the maximum control over your photos, or you want to experiment with special effects, you can adjust individual settings in your printer software. Follow these steps:

1. Create your image or project in your application software.

2. Access the Main printer settings dialog box as described on page 1-2 (Windows) or page 1-6 (Macintosh).

3. Click Advanced, and then click More Settings. You see the More Settings dialog box:

![More Settings dialog box]

Some of these options are automatically set or disabled by other settings you choose.

Note: After you customize your print settings for a special project, you can save them as a group. Then you can reuse them whenever you print a similar project. See page 2-11 for instructions.
4. Choose one of the following Print Quality options:
   - Economy
     For low-resolution rough drafts on plain paper. Saves ink.
   - Normal - 360 dpi
     For printing on plain paper, transparencies, or 360 dpi Ink Jet paper.
   - Fine - 720 dpi
     For the highest-resolution output. Works best on photo quality media.

5. Choose the Media Type and Ink settings you want to use, following the guidelines in Chapters 1 and 3.

6. Choose one of the following Halftoning options:
   - No Halftoning
     For black text only.
   - Error Diffusion
     For photographic images. Blends each dot of color with surrounding dots.
   - Fine Dithering
     For charts, graphs, and other images that require precise, solid areas of bright colors. Arranges dots in orderly patterns.
7. Choose any of the following options. Some of these settings are automatically selected or disabled by the Print Quality (resolution) you choose.

- MicroWeave
  For improved print quality. Prints graphic data in finer increments to eliminate unwanted banding effects (light horizontal lines). Always use for color printing.

- Super MicroWeave
  Use with Photo Quality media if MicroWeave doesn't completely eliminate banding in your printout. Printing is slower.

- High Speed
  For fast, bidirectional printing at lower quality.

- Flip Horizontal
  Prints a mirror image of your document. Use for printing with iron-on transfer paper. When you iron the printout onto a T-shirt or other item, it will read correctly.

- Finest Detail
  For printing text, graphics, and line art with very sharp edges. Slows print speed and increases your system memory requirements.

8. Click OK if you're ready to print, or see the next section if you want to adjust your printer's color settings.
Customizing Color Settings

You can choose from several color adjustment modes or manually adjust brightness, contrast, and saturation. For professional color correction, you can set individual CMY color values. To achieve the maximum color accuracy, you can use Image Color Matching (ICM) under Windows 95 or ColorSync on the Macintosh.

Follow these steps to customize your color settings:

1. Access the More Settings dialog box as described on page 2-4.

   The color settings appear on the right side of the dialog box, as shown:

   ![Windows](ICM is available only for Windows 95)
   ![Macintosh]

Click to set Color Adjustment Mode
Drag sliders to set values between -25% and +25%
2. Choose one of the following Color Adjustment Modes:
   - Automatic
     Analyzes the color information in your image and optimizes color correction accordingly.
   - Photo-realistic
     For increased contrast in color photographs.
   - Vivid
     For printing graphics-intensive documents like presentation pages with charts and graphs. Intensifies colors and lightens the midtones and highlights.
   - No Color Adjustment (Macintosh only)
     Choose this mode only if you’re using ColorSync.

3. If you want to specify individual color correction values, use the sliders to increase (drag right) or decrease (drag left) the settings listed below. (If you want to use the options described in step 4, you won’t be able to specify individual color correction values.)
   - Brightness
     Makes your image lighter or darker.
   - Contrast
     Increases or decreases the difference between the bright or dark parts of an image.
   - Saturation
     Makes colors more vivid or less vivid.
   - Cyan, Magenta, Yellow
     Increases or decreases individual color values. The Cyan and Magenta settings also affect the light cyan and light magenta inks. Use these sliders to fine-tune the color balance in your printout.
4. For even more fine-tuning, choose PhotoEnhance, ICM (Windows 95), or ColorSync (Macintosh).

- **PhotoEnhance**
  Produces sharper images and more vivid colors by automatically adjusting the contrast, saturation, and brightness. Corrects for over- or under-exposure of the original photograph.

- **ICM (Windows 95 only)**
  Automatically adjusts printout colors to match colors on the screen.

- **ColorSync (Macintosh only)**
  Automatically adjusts printout colors to match colors on the screen. See “Using ColorSync on the Macintosh” for more information.

5. Click **OK** to return to the Main printer settings dialog box.

6. Click **Save Settings** if you want to save your custom settings as a group that you can reuse for special projects. See page 2-11 for more information about saving settings.

7. Click **OK** (Windows) or **Print** (Macintosh). If you’re using Windows, click any other buttons that your application uses for printing.

---

**Using ColorSync on the Macintosh**

Every device you use for viewing or producing colors—your monitor, scanner, and printer—uses a different color technology. That’s why it’s difficult to get printed colors to match the colors displayed on your monitor.

Each device has its own gamut, or range of colors that it can reproduce. The Macintosh ColorSync system translates colors from one gamut to another so your monitor’s colors match your printer’s as closely as possible.
ColorSync uses profile information from each device—including your EPSON Stylus Photo—to achieve accurate color matching. First you have to make sure your monitor's profile is set. Then you can use your printer software to specify the exact method of gamut mapping (color matching) you want to use.

Follow these steps to set your monitor's ColorSync profile and use your printer software's ColorSync features:

1. **Open** ColorSync System Profile under Control Panels on the Apple menu.
2. **Click** the Set Profile button.
3. **Select** your monitor from the list, and then click Select.
4. **Close** ColorSync System Profile.
5. Access the More Settings dialog box as described on page 2-4.
6. **Click** ColorSync.
7. **For** Profile, choose EPSON Standard.
8. **Choose** one of the following options for Rendering Intent:
   - **Perceptual**
     Scales the displayed colors to fit within the printer's gamut. Maintains the relationship between colors.
   - **Saturation**
     For printing graphics-intensive documents like presentation pages with charts and graphs (at Fine - 720 dpi Print Quality on Photo Quality media only). Maintains the relative saturation of colors from one gamut to another.
   - **Colorimetric**
     For matching colors as precisely as possible (at Fine - 720 dpi Print Quality on Photo Quality media only). Maintains colors that fall within the gamut of both the monitor and printer, but may lose some detail in areas where the colors are outside the printer's density range.

**Note:**
The EPSON Standard profile is custom-designed for your printer. If you use a scanner or other color imaging equipment, you may have other profiles available.
9. Click OK, and then click Print.

**Saving Custom Settings**

After you’ve fine-tuned your printer settings for a special project, you can save your settings as a group. Then you can easily select the settings the next time you print a similar project. Follow these steps:

1. Customize your printer settings as described in this chapter.

2. Click the Save Settings button on the Main printer settings dialog box.
   You see one of the following:

3. Type a unique name for your settings (up to 16 characters) and click the Save button. The name you choose will now be available on the Main printer settings dialog box when you click Advanced, and then Custom Settings.

Note: You can save up to 10 groups of settings.
Your EPSON Stylus Photo lets you print on just about any kind of paper you want to use. You can get great results printing on various sizes of plain paper, letterhead, and envelopes. You’ll get even better results with specially coated ink jet paper. For the best output, use EPSON’s Photo Paper or other photo quality media.

For special projects, you can use a variety of EPSON media designed for ink jet printers, ranging from transparencies to iron-on transfer paper. You can even set up your printer to use custom paper sizes to print panoramic images. This chapter covers the following:

- Using special media
- Printing panoramic images and other custom size projects

Using Special Media

When you print on special media, you need to be careful about choosing the correct Media Type and Paper Size settings in your printer software. Use the table on the next page to help you match the paper or media you loaded in the printer with the Media Type setting in the software.
The type of paper or other media you use is one of the most important factors in determining the quality of your printed output. The following tips will help you get the best results on any type of paper or other media.

<table>

Printing on Special Media

Letterhead, Pre-printed Forms, and Legal-size Paper

Always load the top edge first.

If you’re loading legal-size paper, pull out the paper support extension.

Note: When you load paper, make sure the printable side is facing up. Some special media have a cut corner that you need to position correctly; follow any instructions in the package. Always handle sheets by the edges, and don’t touch the printable surface.

EPSON 360 dpi, High Quality, and Photo Quality Ink Jet Paper

You can load paper up to the arrow mark on the left edge guide. If you use legal-size ink jet paper, don’t load it more than halfway to the arrow mark.

Caution: Don’t use the cleaning sheets that may be included with your special media; they may damage the printer.
Printing on Special Media

**EPSON 4 x 6 Photo Paper**

Photo paper (4 x 6) is perforated around the edges, so you can trim your printouts and “bleed” the photo—extend it to the edge of the paper—on all sides. Follow these steps to print on EPSON Photo paper:

1. Load the paper with the whiter side facing up and the perforated margins positioned as shown:

   ![Perforated margins diagram]

   You can load up to 20 sheets of Photo paper at a time. Make sure you place the included support sheet beneath the stack, but don’t print on it.

2. Slide the left edge guide so it fits snugly against the paper.

3. When you create the image in your application software, size it to 4.25 x 6.25 inches.

   ![Image size diagram]
4. Choose EPSON Photo Paper 4 x 6 in as the Paper Size setting and Maximum as the Printable Area setting.

5. Choose Photo Quality Glossy Paper as the Media Type setting.

6. After you print your picture, fold the paper back and forth along the perforations and carefully tear the margins off.

To keep your printouts looking their best, store them in a resealable plastic bag or other airtight covering and protect them from heat, humidity, and direct sunlight.

**EPSON Photo Quality Glossy Paper, Film, and Transparencies**

Follow these steps to print on glossy media or transparencies:

1. To print on transparencies only, remove the paper support and reinstall it in the rear paper support slot, as shown below. For glossy paper and film, leave the paper support in the normal position.

---

**Note:**
Use ink jet papers within one year of purchase. Use glossy media and transparencies within six months. Return unused sheets and envelopes to their original package as soon as possible and avoid exposing them to heat, humidity, and direct sunlight. See the Appendix for more storage information.
Printing on Special Media

2. Before you load the media, place the included support sheet or a plain paper sheet beneath the stack. You can load up to 20 sheets of glossy paper, 30 sheets of glossy film, or 10 transparencies. However, you may get better results by loading one sheet at a time. With multiple sheets loaded, the minimum top margin you can use is 1.2 inches.

3. Make sure you load the media with the printable side facing up. If the sheets have a cut corner, position them as shown:

4. Remember to choose the correct Media Type setting in your printer software, following the guidelines on page 3-2.
Envelopes

You can load up to 10 envelopes at a time. Adjust the left edge guide and load the envelopes as shown, flap edge first and printable side up:

Set the thickness lever to the + position when you print on envelopes or if ink smears when you print on other thick media. Open the printer cover and position the lever as shown below. Then close the cover and print. (Make sure you return the lever to the 0 position before you print on thin media.)

Note:
Before you print, make sure you set the Paper Size option for the type of envelope you’re using. Set the Media Type to Plain paper.
Printing on Special Media

**EPSON Photo Quality Ink Jet Cards**

Use these cards to print photos, postcards, or greeting cards.

You can load up to 30 cards at a time with the included support sheet or a sheet of plain paper beneath the stack. When you’re ready to print, use your software to set the Paper Size option for the size card you’re using and set the Media Type to Photo Quality Ink Jet Paper.

If ink smears on the cards, set the thickness lever to the + position as shown on page 3-7.

**EPSON Iron-On Transfer Paper**

You can print photos, company logos, or anything else you want on this paper, and then transfer your images to T-shirts or other cloth items. Load one sheet of transfer paper at a time, and set the Media Type option to 360 dpi Ink Jet Paper. After you print, follow the instructions that came with the paper to iron the image onto the shirt or other item.

**EPSON Photo Quality Self Adhesive Sheets**

Use these sheets to print labels or stickers. Load one sheet at a time, and set the Media Type option to Photo Quality Ink Jet Paper. Make sure your adhesive sheets are fully adhered to their backing sheet before you load them.
Printing Panoramic Images and Other Custom Size Projects

You can use banner paper or ordinary (continuous-form) computer paper to print an image up to 44 inches long. You can also print on any size paper that fits into the printer (at least 3.94 × 3.94), by using the custom page size feature of your printer software on either a Windows computer or a Macintosh.

1. To make a 44-inch print with continuous-form computer paper, first tear off four sheets and remove the perforations at the edges. If you are using non-perforated banner paper, cut the paper to the length you want for easier handling.

2. Insert the paper in the printer as shown. The right edge of the paper should be against the right edge guide.

3. Slide the left edge guide next to the left edge of the paper.

4. Follow the instructions below to print your image on either a Windows computer or a Macintosh.
Printing on Special Media

Printing a Panoramic Image from Windows

Follow these steps to print a panoramic image or other custom-size project on a Windows computer:

1. Create the project in your graphics application or other software. You can create it in either portrait or landscape orientation.

2. Click the print icon or choose Print or Print Setup from the File menu. You see a printing dialog box.

3. Make sure your printer is selected, and then click the Printer, Setup, Properties, or Options button. (You may have to click a combination of these buttons.) You see the Main printer settings dialog box, as shown on page 1-2.

4. Click the Paper tab. You see a dialog box like the following:

5. Choose User Defined from the Paper Size list.
The following dialog box appears:

6. Type 8.5 inches for the Paper Width and any size up to 44 inches for the Paper Height. (This works for both “landscape” and “portrait” style images.) Click OK.

7. Choose Portrait or Landscape if you haven’t already specified the orientation in your application software. Set the printable area if necessary.

8. Click the Main tab to return to the Main printer settings dialog box. Make sure you choose the appropriate media type and the other settings you want to use, and then click OK.

9. Click Close, OK, or Print to print your image. You may need to click a combination of these buttons.

Printing a Panoramic Image from a Macintosh

Follow these steps to print a panoramic image or other custom-size project on a Macintosh:

1. Create the document in your graphics application or other software. You can create it in either portrait or landscape orientation.

2. Choose Page Setup from the File menu.
Printing on Special Media

You see a dialog box like the following:

3. Choose Portrait or Landscape, depending on the orientation you want. Set the printable area if necessary.

4. Click the Customize button. The following dialog box appears:

5. Click the New button. The dialog box changes:

6. Type a name for your custom size in the New Paper Size box.
Printing on Special Media

7. To print a panoramic image, type 8.5 inches for the Width and up to 44 inches for the Height. (This works for both “landscape” and “portrait” style images.) Click OK, then OK again.

8. Choose Print from the File menu or click the print icon in your application. You see a printer settings dialog box like the one shown on page 1-6.

9. Make sure you choose the appropriate media type and the other settings you want to use, and then click Print to print your banner.

Tip

If you're using computer paper, choose Plain paper for the Media Type setting. If you're using coated banner paper, try the Photo Quality Ink Jet Paper setting.
Managing Print Jobs and Network Printing

Your printer software includes several utilities for managing print jobs. You can use them to monitor your printer’s status, set up large jobs to print later, and handle network printing. If you’re using your printer on a network, you need to follow special setup procedures.

This chapter provides instructions for the following:

- Managing print jobs in Windows
- Managing print jobs on a Macintosh
- Network printing on a PC

Managing Print Jobs in Windows

Your Windows printer software includes two management utilities: the Spool Manager and Status Monitor.

- The Spool Manager starts automatically when you send a job to the printer. It allows you to print in the background while you continue to work on your computer and to hold jobs to print at a later time. If you’re using your printer on a network, it also handles multiple print jobs that come in at the same time.
- The Status Monitor, which is available only if you’re using Windows 95, also starts automatically when you send a job to the printer. It displays on your screen to alert you about printer and ink status.

Note: The Status Monitor doesn’t appear if you’re printing over a network.
Managing Print Jobs and Network Printing

Using the Spool Manager

The Spool Manager works like the Windows Print Manager. When you send a job to your printer, your printer software creates a temporary journal file, stores it in the C:\TEMP or C:\WINDOWS\TEMP folder or directory, and assigns it to a print queue. The software then sends the file to your printer at the right time.

- To open the Spool Manager while you're printing, click the Spool Manager icon that appears on the Taskbar (Windows 95) or at the bottom of your desktop (Windows 3.1).
- To open it at any time, double-click the Spool Manager icon in the EPSON program group or folder.

You see the Spool Manager window:

![Spool Manager window](image)

The Spool Manager window displays the status of your print queues and journal files and lets you control them.
Managing Print Jobs and Network Printing

Here are some of the things you can do:

- Hold or release a queue
- Send journal files to your printer over a network
- Hold, re-queue, or delete a journal file
- Select the information you want to see in the Spool Manager window
- Prevent the Despooler popup window from appearing on your screen whenever you print
- Change your default spool directory

Deleting a Stalled Print Job

If you’re having trouble printing, it may be because of a stalled print job. Follow these steps to delete it so you can continue printing:

1. Open the Spool Manager as described on page 4-2.
2. Click on any print jobs marked Held, then open the Document menu and click Delete.
3. Click Yes.
4. Exit Spool Manager and try printing again.

Changing the Default Spool Directory

If you get an error message when you try to print, or printing is very slow, you can try changing your default spool directory. Follow these steps:

1. Make a directory on your hard disk where you want Spool Manager to store journal files, for example, C:\SPLTEMP.
2. Open the Spool Manager as described on page 4-2.
3. Choose Default Spool Directory from the Options menu.
Managing Print Jobs and Network Printing

4. In the dialog box, change the spool directory to the one you created in step 1. Then click OK.

5. Make sure EPSON Stylus Photo is selected, and then choose Setup from the Queue menu. The Queue Setup dialog box appears.

6. Make sure the spool directory is the one you created in step 1. Also make sure Use Print Manager for this port is checked. Then click OK. (If you are using Windows 95 and don’t see the Status Monitor when you print, make sure it’s unchecked.)

7. Close Spool Manager.

Using the Status Monitor

The Status Monitor, available only if you’re using Windows 95, displays automatically when you send a job to the printer. However, you can use it at any time to see how much ink you have left. Follow these steps:

1. Access the Main printer settings dialog box as described on page 1-2.

2. Click the Utility tab.
Managing Print Jobs and Network Printing

You see the Utility menu:

3. Click the EPSON Status Monitor icon. You see the Despooler window with the Status Monitor at the bottom:

4. Check the amount of ink you have left. For more information about the Despooler window, see page 1-5.
Managing Print Jobs and Network Printing

Managing Print Jobs on a Macintosh

Your Macintosh printer software includes two management utilities: Monitor2 and Status Monitor.

- If you're using background printing, Monitor2 starts automatically when you send a job to the printer. It handles printing while you continue to work on your Macintosh and lets you track documents that are waiting to be printed.

- The Status Monitor alerts you to any problems that occur during printing. You can also use it at any time to see how much ink you have left.

Using Monitor2

The Monitor2 utility lets you continue to work on your Macintosh while your document is printing. However, background printing is slower and may also slow down your system.

If you want to use this utility, you need to turn on background printing in the Chooser and increase the memory allocation for Monitor2. Follow these steps:

1. Open the Chooser from the Apple menu and select the EPSON Stylus(EX) icon. Then click either the printer or modem icon.
2. Under Background Printing, click On and close the Chooser.
3. To increase the memory allocated to Monitor2, select EPSON Monitor2 in the Extensions folder in your System folder.
4. Choose Get Info from the File menu.
Managing Print Jobs and Network Printing

5. Under Memory Requirements, set the Prefered Size to 3000K.

6. While you’re printing, click the EPSON Monitor2 icon on the Application menu at the right end of the menu bar. You see a dialog box like the following:

7. You can select a job and cancel it or just use this window to track the printer’s progress.

Using the Macintosh Status Monitor

You can use the Status Monitor to check the level of ink in your printer and to control the way your software warns you about printer problems. Follow these steps:

1. Choose Print from the File menu or click the print icon in your application. You see the printer settings dialog box.
Managing Print Jobs and Network Printing

2. Click the Utility button. You see the Utility menu:

3. Click the Status Monitor icon. The software checks the amount of ink remaining in the printer and displays the Status Monitor window:

4. If you want to change printer messages and warnings, click the Configuration button.
Managing Print Jobs and Network Printing

You see the following dialog box:

![Configuration Setting](image)

5. Choose the options you want and click OK.

Network Printing on a PC

You can use your printer on a network under Windows 95 or other network operating systems. The Spool Manager sends journal files from your computer to a shared directory on a network server. These files can then be printed from another computer attached to the printer.

First you need to install the EPSON Stylus Photo printer software on each computer that is going to print on the network. Then run Spool Manager and identify the shared directory to use for journal files. After you set this up on the system connected to the printer (the host system), you need to perform a similar procedure on each remote system on the network.

Under Windows 95, you also need to specify the port and network path to the printer.
 Setting Up the Host System

Follow these steps to set up the computer connected to the printer:

1. Create an icon for the EPSON Spool Manager (EPSPMGR4.EXE) in the \WINDOWS\SYSTEM folder.
2. Place this icon in the Startup folder.
3. Open the Spool Manager window as described on page 4-2.
4. In the Spool Manager window, double-click the queue you want to use for network printing. The Queue Setup dialog box appears.
5. Click the Remote Despool tab and then click the Printing from remote queues option.
6. Click the Browse button and select the remote server directory that will receive journal files.
7. Click OK and minimize the Spool Manager.

 Setting Up Remote Systems

Follow these steps to set up computers on the network:

1. Create an icon for the EPSON Spool Manager (EPSPMGR4.EXE) in the \WINDOWS\SYSTEM folder.
2. Open the Spool Manager window as described on page 4-2.
3. In the Spool Manager window, double-click the queue you want to use for network printing. The Queue Setup dialog box appears.
4. Click the Spool to remote printer button.
Managing Print Jobs and Network Printing

5. Click the **Browse** button and select the directory you’re using for journal files on the remote server.

6. Click **OK** and minimize the Spool Manager.

Setting Up Your Network Path in Windows 95

If you want to use your printer on a network running Windows 95, you need to set up the port and network path on the computer connected to the printer. Follow these steps:

1. Click **Start**, point to **Settings**, and then point to **Printers**.

2. Right-click the **EPSON Stylus Photo** icon and choose **Properties**.

   Click the **Details** tab. You see the dialog box shown below:

3. Click the **Add Port** button, then specify the network path to the printer and click **OK**.
Managing Print Jobs and Network Printing

4. Open the Spool Manager window as described on page 4-2.

5. In the Spool Manager window, double-click your printer’s queue. The Queue Setup dialog box appears.

6. Make sure the Use Print Manager for this port option is checked. Then click OK.
It's easy to keep your EPSON Stylus Photo printer working at its best. All you have to do is follow the simple instructions in this chapter for replacing ink cartridges, moving the printer, and performing routine maintenance.

This chapter covers the following procedures:

- Cleaning the print heads
- Replacing an ink cartridge
- Aligning the print heads
- Cleaning the printer
- Transporting the printer

Cleaning the Print Heads

If your printed image is unexpectedly light or faint, or dots are missing from the image, you may need to clean the print heads. This unclogs the nozzles so they can deliver ink properly.

Cleaning the print heads uses ink, so clean them only if print quality declines. You can use either of the following to clean the print heads:

- The Head Cleaning utility in your printer software (if the printer is on a local port rather than a network)
- The printer’s control panel buttons.

Caution:
Don't use the cleaning sheets that may be included with your special media; they may damage the printer.
Using the Head Cleaning Utility

Follow these steps to run the utility from a Windows computer or a Macintosh:

1. Make sure the printer is turned on but not printing, and the black and color ink out lights are off.

2. Access the Main printer settings dialog box as described in Chapter 1.

3. Click the Utility tab (Windows) or the Utility button (Macintosh). You see the Utility menu.

4. Click the Head Cleaning icon.

5. Follow the instructions on the screen to clean the print heads. Cleaning takes about two minutes, during which the printer makes some noise and the power light flashes. When the power light stops flashing, you need to run a nozzle check.

6. Make sure paper is loaded in the printer and click Print nozzle check pattern (Windows) or Confirmation (Macintosh). See page 5-3 for instructions on examining the nozzle check pattern.

If your print quality has not improved, repeat the steps above. If you don’t notice any improvement after doing this four or five times, check the print quality solutions in Chapter 6.

Using the Control Panel

1. Make sure the printer is turned on and not printing, and that the black and color ink out lights are off.

2. Press the cleaning button and hold it for three seconds. Cleaning takes about two minutes, during which the printer makes some noise and the power light flashes.
After the cleaning cycle is complete and the power light stops flashing, you need to run a nozzle check.

3. Access the Main printer settings dialog box as described in Chapter 1.

4. Click the Utility tab (Windows) or the Utility button (Macintosh). You see the Utility menu.

5. Click the Nozzle Check icon. See the next section for instructions on examining the nozzle check pattern.

If your print quality has not improved, repeat the steps above. If you don’t notice any improvement after doing this four or five times, check the print quality solutions in Chapter 6.

**Examining the Nozzle Check Pattern**

Examine the nozzle check pattern you print. It should look something like this, with each of the six sections showing one of the ink colors:

![Nozzle Check Pattern](image)

Each staggered horizontal and straight vertical line should be complete, with no gaps in the dot pattern. If your printout looks okay, you’re done. If any dots are missing, clean the print heads again, as explained in the previous sections.

**Replacing an Ink Cartridge**

When a black or color ink out light flashes, the indicated cartridge is low on ink. This is a good time to make sure you have a new cartridge. When the light stays on, the cartridge is empty and you need to replace it.
Maintenance and Transportation

Use these EPSON ink cartridges within six months of installing them and before the expiration date on the package:

- Black ink cartridge: S020093
- Color ink cartridge: S020110

When you need new ink cartridges, contact your dealer or call EPSON Accessories at (800) 873-7766 (U.S. only). In Canada, please call (800) 873-7766 for dealer referral.

Removing an Empty Ink Cartridge

You can replace a cartridge when the black or color ink out light is either flashing or on. Follow these steps:

1. Make sure the printer is turned on and not printing.
2. Determine which cartridge needs to be replaced.
3. Lower the output tray and raise the printer cover.
4. Press the cleaning button and hold it for three seconds.
   The print heads move slightly left and the power light begins flashing. (The print heads return to their home position if you don’t proceed to step 5 within 60 seconds.)
5. Pull up the ink cartridge clamp. The cartridge rises up from its holder. (Although the illustration shows the color ink cartridge, the procedure is the same for replacing the black ink cartridge.)
6. Lift the cartridge out of the printer and dispose of it carefully.

7. Follow the steps in the next section to install the new ink cartridge.

**Installing the New Cartridge**

Once you have removed the empty cartridge, you’re ready to install the new one. Follow these steps:

1. Remove the new ink cartridge from its packaging.

Caution:
Don’t open the clamp or remove a cartridge except to replace it with a new one. Once you remove a cartridge, you can’t reuse it. Even if the cartridge contains ink, reusing it may damage the print head.

Warning:
If ink gets on your hands, wash them thoroughly with soap and water. If ink gets into your eyes, flush them immediately with water.
2. Remove the yellow tape seal as shown:

Caution:
You must remove the tape seal from the top of the cartridge; leaving the tape on will permanently damage it. Do not remove the clear seal from the bottom of the cartridge; ink will leak out.

3. Lower the ink cartridge into its holder with the label facing up and the arrow pointing to the back of the printer. The larger cartridge (color) goes on the right, the black ink cartridge on the left.
4. Press down the ink cartridge clamp until it locks in place.

5. If you need to replace the other ink cartridge, remove it as described in “Removing an Empty Ink Cartridge” on page 5-4. Then follow steps 1 through 4 in this section.

6. Press the \[R\] cleaning button and close the printer cover. The printer moves the print heads and begins charging the ink delivery system. (Even if you don’t press the button, ink charging begins 60 seconds after you close the clamp.)

The \[P\] power light flashes and the printer makes various sounds. Charging takes about two minutes. When it’s finished, you can print again.

**Replacing an Outdated Ink Cartridge**

If an ink cartridge is more than six months old, you may need to replace it. How can you tell? You may notice that your printouts don’t look as good as they used to. If print quality doesn’t improve after cleaning and aligning the print heads, you can replace one or both cartridges.
Maintenance and Transportation

Follow these steps to replace an ink cartridge before the black or color ink out light is flashing or on:

1. Make sure the printer is turned on and not printing.
2. Lower the output tray and raise the printer cover.
3. Press the load/eject button and hold it down for a few seconds until the print heads move to the left.
4. Pull up the ink cartridge clamp. The cartridge rises up from its holder.
5. Lift the cartridge out of the printer and dispose of it carefully.
6. Follow the steps in the previous section, “Installing the New Cartridge,” to install the new ink cartridge.

Aligning the Print Heads

If your printouts contain misaligned vertical lines, you may need to align the print heads. Follow these steps:

1. Make sure the printer is turned on and paper is loaded.
2. Access the Main printer settings dialog box as described in Chapter 1.
3. Click the Utility tab (Windows) or the Utility button (Macintosh). You see the Utility menu.
4. Click the Print Head Alignment icon.
5. Follow the instructions on the screen to print a test page and select the correct alignment.

Caution: To avoid damaging the printer, never move the print heads by hand.
Cleaning the Printer

To keep your printer working at its best, you should clean it several times a year, following these steps:

1. Turn off the printer, unplug the power cord, and disconnect the printer cable.

2. Remove all the paper from the sheet feeder.

3. Carefully clean away dust and dirt with a soft brush.

4. Clean the exterior of the printer with a soft, damp cloth. Keep the printer cover closed so water doesn’t get inside.

5. Clean ink out of the printer’s interior with a damp cloth.

Caution:
Don’t touch the gears inside the printer.

Never use alcohol or thinner for cleaning; they can damage the printer components and case.

Don’t use a hard or abrasive brush.

Don’t get water on the printer components.

Don’t spray lubricants or oils inside the printer.
Transporting the Printer

If you want to move your printer some distance, you need to prepare it for transportation and repack it in the original box. Follow these steps:

1. Turn on the printer and wait until the print heads lock in the far right position. Then turn off the printer.

2. Unplug the power cord from the electrical outlet. Then disconnect the interface cable from the printer.

3. Remove any paper from the sheet feeder and remove the paper support.

4. Push in the output tray extensions and close the tray.

5. Repack the printer and attachments in the original box using the protective materials that came with it. See the Notice Sheet that was packed with the printer.

Be sure to keep the printer flat as you transport it. If you notice a decline in print quality after transporting the printer, clean the print heads; if output is misaligned, align the print heads. See the instructions in this chapter.
As you use your printer, you may occasionally experience a paper jam or other problem. The first thing you should do is diagnose the problem, following the guidelines in this chapter. Then try the most likely solutions until the problem is fixed.

This chapter tells you everything you need to know about the following:

- Diagnosing problems
- Improving print quality
- Solving printing problems
- Fixing paper jams and other paper problems
- Solving miscellaneous printout problems

**Diagnosing Problems**

Your printer includes a number of ways to help you diagnose problems:

- To identify the most common problems, check the lights on the printer’s control panel. See “What To Do When the Printer Lights Flash” on page 1-9.

- You can also use the Status Monitor utility to identify common problems. For instructions, see page 4-4 (Windows 95) or page 4-7 (Macintosh).
Troubleshooting

To determine whether the problem is caused by the printer itself, run a printer operation check. See “Running a Printer Check” for instructions.

For the latest information, check the EPSON Stylus Photo Help program and the ReadMe file in the EPSON program group or folder.

If none of the suggested solutions in this chapter solve your problem, contact EPSON as described under “Where to Get Help” in the Introduction.

Running a Printer Check

You can run a printer check to determine whether the problem comes from the printer itself or some other source.

If the results are satisfactory, the problem lies in software settings, the interface cable, or your computer.

If the printer check does not print correctly, you have a problem with your printer. See the suggestions in this chapter for possible solutions.

Follow these steps to check the printer:

1. Make sure both the printer and computer are turned off.
2. Disconnect the interface cable from the printer.
3. Make sure paper is loaded in the printer.
4. Hold down the load/eject button and press the power button. Hold down the buttons until the power light starts to flash. Then release both buttons.

The printer prints one page containing a nozzle check pattern (shown on page 5-3), the printer's ROM version, ink counter code, and character table.

5. After it prints the page, turn off the printer. Remember to reconnect the interface cable, then turn on the printer and your computer.
Improving Print Quality

You can often improve print quality by doing one of the following:

- Clean the print heads (see Chapter 5 for instructions).
- Use higher quality paper appropriate for your print job (see Chapter 3 for a list of EPSON papers).
- Match the Media Type setting in the Main printer settings dialog box to the type of media you loaded in the printer (see Chapter 3 for details).
- Make sure High Speed mode is off (see Chapter 2 for details).
- Make sure Economy mode is off (see Chapter 2 for details).
- Replace the ink cartridges. (Check the status of the black and color ink out lights first. See Chapter 5 for instructions.)

Here are some detailed solutions to specific print quality problems.

**The printed image has horizontal banding**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Media Type setting doesn’t match the loaded paper.</td>
<td>Make sure the Media Type setting matches the loaded paper or other media. Then the printer software can automatically select other settings for the best quality. See Chapters 1 and 3.</td>
</tr>
<tr>
<td>The printable side of the paper is face down.</td>
<td>Remove the paper and reload it with the printable side face up. See Chapter 3 for instructions.</td>
</tr>
<tr>
<td>The print head nozzles are clogged.</td>
<td>Clean the print heads. See Chapter 5 for instructions.</td>
</tr>
<tr>
<td>The ink cartridges are low on ink.</td>
<td>Check the black and color ink out lights to see which cartridge you may need to replace. See Chapter 5.</td>
</tr>
<tr>
<td>The MicroWeave (or Super MicroWeave) option is not set.</td>
<td>Turn on MicroWeave (or Super MicroWeave) in the advanced printer settings dialog box. See Chapter 2 for more information.</td>
</tr>
</tbody>
</table>
Troubleshooting

**Vertical lines are misaligned or vertical banding appears**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The print head nozzles are clogged.</td>
<td>Clean the print heads. See Chapter 5 for instructions.</td>
</tr>
<tr>
<td>High Speed mode is turned on.</td>
<td>Turn off High Speed mode if vertical lines are misaligned. See Chapter 2 for information.</td>
</tr>
<tr>
<td>The print heads are misaligned.</td>
<td>Run the Print Head Alignment utility. See Chapter 5 for instructions.</td>
</tr>
</tbody>
</table>

**The printed image has incorrect or missing colors**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Ink option is set to Black.</td>
<td>Change the Ink setting to Color. See Chapter 1 for instructions.</td>
</tr>
<tr>
<td>The Media Type setting doesn't match the loaded paper.</td>
<td>Make sure the Media Type setting matches the paper or media you're using. Then the printer software can automatically select other settings for the best quality. See Chapters 1 and 3.</td>
</tr>
<tr>
<td>The printable side of the paper is face down.</td>
<td>Remove the paper and reload it with the printable side face up. See Chapter 3 for instructions.</td>
</tr>
<tr>
<td>The Halftoning and Color Adjustment Mode options are set incorrectly for your document type.</td>
<td>Use the correct settings for the project you’re printing, following the instructions in Chapter 2.</td>
</tr>
<tr>
<td>The print head nozzles are clogged.</td>
<td>Clean the print heads. See Chapter 5 for instructions.</td>
</tr>
<tr>
<td>The ICM (Windows 95) or ColorSync (Macintosh) settings are incorrect for your document.</td>
<td>Use the Automatic mode setting or choose a different project type or Rendering Intent setting. See Chapter 2 for more information.</td>
</tr>
<tr>
<td>The ink cartridges are low on ink or one or more ink colors are empty.</td>
<td>Check the ■ black and □ color ink out lights to see which cartridge you may need to replace. See Chapter 5 for instructions.</td>
</tr>
<tr>
<td>The colors displayed on your monitor don't match the printed colors.</td>
<td>Because your monitor and printer use different technologies to represent colors, your printed colors cannot exactly match the colors you see on your monitor screen. Use the ICM (Windows 95) or ColorSync (Macintosh) settings. See Chapter 2 for more information.</td>
</tr>
<tr>
<td>The color settings in your application software need adjustment.</td>
<td>You may be able to adjust various color settings in your application software. See your software documentation for more information.</td>
</tr>
</tbody>
</table>
## Troubleshooting

### The printed image is faint or has gaps

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The print head nozzles are clogged.</td>
<td>Clean the print heads. See Chapter 5 for instructions.</td>
</tr>
<tr>
<td>The Media Type setting doesn’t match the loaded paper.</td>
<td>Make sure the Media Type setting matches the loaded paper or other media. Then the printer software can automatically select other settings for the best quality. See Chapters 1 and 3.</td>
</tr>
<tr>
<td>The loaded paper is damaged, old, or dirty.</td>
<td>Remove the paper and reload a new stack with the printable side face up. See Chapter 3 for instructions.</td>
</tr>
<tr>
<td>The ink cartridges are low on ink.</td>
<td>Check the black and color ink out lights to see which cartridge you may need to replace. See Chapter 5 for instructions.</td>
</tr>
</tbody>
</table>

### The printed image is blurry or smeared

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The printer’s thickness lever is in the 0 position.</td>
<td>Set the thickness lever to the + position and try printing again. See Chapter 3 for instructions.</td>
</tr>
<tr>
<td>The paper is damp or the printable side is face down.</td>
<td>Remove the paper and reload a new stack with the printable side face up. See Chapter 3 for instructions.</td>
</tr>
<tr>
<td>You loaded special media without a support sheet.</td>
<td>Follow the special media loading instructions in Chapter 3 and on the paper packaging for media that require support sheets. Also try loading your media one sheet at a time.</td>
</tr>
<tr>
<td>You tried to print on cardboard or other non-recommended media.</td>
<td>Make sure your paper or media meets the specifications listed in the Appendix. If your printouts are still blurry after you change paper, clean the print heads as described in Chapter 5.</td>
</tr>
<tr>
<td>The Media Type setting does not match the loaded paper.</td>
<td>Make sure the Media Type setting matches the media you loaded. Then the printer software can automatically select other settings for the best quality. See Chapter 3 for information.</td>
</tr>
<tr>
<td>The sheets entering the output tray are smearing the ink on ejected pages.</td>
<td>Remove each sheet from the output tray as soon as it is printed to prevent smearing, especially if you use transparencies.</td>
</tr>
<tr>
<td>Ink has leaked inside the printer.</td>
<td>Clean carefully inside the printer to remove spilled ink. See Chapter 5 for instructions.</td>
</tr>
<tr>
<td>The color ink cartridge is empty.</td>
<td>Replace the color ink cartridge following the instructions in Chapter 5 or choose Black ink in your printer software.</td>
</tr>
<tr>
<td>You’re using the High Speed and MicroWeave settings with a misaligned print head.</td>
<td>Turn off High Speed following the instructions in Chapter 2. Run the Print head Alignment utility following the instructions in Chapter 5.</td>
</tr>
</tbody>
</table>
Troubleshooting

Photographic images look grainy or rough

</tr>
<tr>
<td>selected.</td>
<td>software.</td>
</tr>
</tbody>
</table>

Solving Printing Problems

If the printer won’t print, first check that:

- The printer is turned on and the \( \bigcirc \) power light is on.
- Paper is loaded in the printer.
- The printer is plugged into a working electrical outlet that’s not controlled by a switch or timer.
- The interface cable is securely connected to the printer and computer and both are turned on.

If you still can’t print, check the following solutions.

All lights are off

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The printer is not receiving power.</td>
<td>Try these solutions:</td>
</tr>
<tr>
<td></td>
<td>Make sure the printer is turned on.</td>
</tr>
<tr>
<td></td>
<td>Turn off the power and plug in the power cord securely.</td>
</tr>
<tr>
<td></td>
<td>Make sure the outlet is not controlled by a switch or timer and is</td>
</tr>
<tr>
<td></td>
<td>operable.</td>
</tr>
</tbody>
</table>
**Troubleshooting**

### Only the **power light** is on, but nothing prints

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The interface cable is not connected securely.</td>
<td>Turn off your printer and computer. Then make sure the cable is connected securely and meets the printer's specifications. (Use a fully shielded parallel cable on a PC or a Macintosh serial cable.)</td>
</tr>
<tr>
<td>The printer has an internal problem.</td>
<td>Turn off the printer and computer, disconnect the interface cable, and run a printer check as described on page 6-2.</td>
</tr>
<tr>
<td>Your printer software or application software is installed incorrectly.</td>
<td>If you ran a printer check successfully, make sure your printer and application software are installed correctly. If you're printing on a Windows 95 network, you may need to set up your printer for network printing, as described in Chapter 4.</td>
</tr>
</tbody>
</table>
| Your computer doesn't have enough memory to handle the data in the file you are printing. | Try one of the following:  
  ◗ Reduce the resolution of your image.  
  ◗ Select fewer colors or a lower resolution for your monitor.  
  ◗ Add more memory to your computer. |
| Printing is stalled in Spool Manager (Windows). | Delete the stalled print jobs in Spool Manager and resume printing; see Chapter 4 for instructions. |
| Your printer can't use the modem port (Macintosh) | If your Macintosh has a built-in modem, connect the printer to the printer port. |
| Printing is stalled in Monitor2 (Macintosh). | Open the Extensions folder, EPSON folder, and Spool folder. Then delete any queued files. |
| The print heads are clogged or the ink cartridges are too old. | If the printer sounds like it's trying to print but doesn't feed paper, clean the print heads; see Chapter 5 for instructions. If cleaning doesn't help, replace the cartridges. For information on cartridge life and replacement instructions, see Chapter 5. |

### The **paper out** light is flashing or on

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>If flashing, paper is jammed.</td>
<td>Remove the paper and follow the guidelines for preventing jams on page 6-12.</td>
</tr>
<tr>
<td>If on, paper is used up or loaded incorrectly.</td>
<td>Load paper or remove the stack and reload it as described in the Quick Setup guide or Chapter 3. Then press the load/eject button to turn off the light and resume printing.</td>
</tr>
</tbody>
</table>
Troubleshooting

**A black or color ink out light is flashing or on**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>If flashing, the ink supply is getting low.</td>
<td>You need to replace the indicated ink cartridge soon. Make sure you have a new cartridge, then see Chapter 5 for instructions.</td>
</tr>
<tr>
<td>If on, the ink cartridge is empty.</td>
<td>You must replace the indicated ink cartridge; see Chapter 5 for instructions.</td>
</tr>
</tbody>
</table>

**The and lights are flashing**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>A carriage error has occurred.</td>
<td>Remove any paper in the printer. Press the load/eject button for about 30 seconds. Then press it again. Turn the printer off, wait a few seconds, and then turn it on and try printing again. If the error is not cleared, contact EPSON as described in the Introduction.</td>
</tr>
</tbody>
</table>

**All the lights are flashing**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>You haven’t removed all the packing material from the printer.</td>
<td>Remove the packing material, following the instructions on the Notice Sheet in the box.</td>
</tr>
<tr>
<td>An internal error may have occurred.</td>
<td>Turn off your printer, wait a few seconds, and turn it on again. If the lights still flash or stay on, contact EPSON as described in the Introduction.</td>
</tr>
</tbody>
</table>

**The printer has finished charging the ink cartridge, but the power light is still flashing**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The ink cartridge clamp isn’t locked down.</td>
<td>Press down on the clamp to lock it into place.</td>
</tr>
<tr>
<td>Packing material remains in the printer.</td>
<td>Remove the packing material, following the instructions on the Notice Sheet in the box.</td>
</tr>
<tr>
<td>The printer needs to initialize.</td>
<td>If the printer is not moving or making noise, but the light is still flashing for more than 5 minutes, turn the printer off. If the light is still flashing when you turn it back on, contact EPSON as described in the Introduction.</td>
</tr>
</tbody>
</table>
### Troubleshooting

**The printer software installed with Windows 3.1 does not work correctly after you upgrade to Windows 95**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Your printer software is not set up correctly for Windows 95.</td>
<td>Reinstall the printer software after installing Windows 95.</td>
</tr>
</tbody>
</table>

**After you install your printing software, you see the Windows 95 New Hardware found window**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>An operating system error has occurred.</td>
<td>Click Do not install a driver, and then click OK.</td>
</tr>
</tbody>
</table>

**You see a spooling error message (Windows)**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spooling error messages or very slow printing may be caused by temporary files.</td>
<td>Change the Spool Manager default directory, following the instructions in Chapter 4.</td>
</tr>
<tr>
<td>Your hard drive is too full.</td>
<td>Delete unnecessary files to make room on the drive.</td>
</tr>
</tbody>
</table>
| Your computer doesn’t have enough memory for the file you’re printing. | Try one of the following:  
  - Reduce the resolution of your image.  
  - Select fewer colors or a lower resolution for your monitor.  
  - Add more memory to your computer. |

**In Windows 95, the Status Monitor box does not appear with the Despooler**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Windows Print Manager is interfering with the Status Monitor.</td>
<td>Make sure Use Print Manager for this port is not checked in the Spool Manager Queue setup. See Chapter 4 for more information.</td>
</tr>
</tbody>
</table>

**You see a type 11 or memory error message (Macintosh)**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>You may need to increase the memory allocation for your application, EPSON Monitor2, or both.</td>
<td>Choose Get Info from the File menu when your application is active and increase the memory requirements. See Chapter 4 for more information. Or turn off background printing (you won’t be able to use Monitor2).</td>
</tr>
</tbody>
</table>
Troubleshooting

A portion of your image doesn’t print (Macintosh)

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Your system doesn’t have enough available memory.</td>
<td>Close any other applications you are running or turn off background printing.</td>
</tr>
<tr>
<td>You may need to increase the memory allocation for your application, EPSON Monitor2, or both.</td>
<td>Choose Get Info from the File menu and increase the memory requirements. See Chapter 4 for more information. Or turn off background printing (you won’t be able to use Monitor2).</td>
</tr>
</tbody>
</table>

Printing is too slow

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Your printer software options are set incorrectly.</td>
<td>For faster printing, try the following:</td>
</tr>
<tr>
<td></td>
<td>◗ Set Print Quality to Economy.</td>
</tr>
<tr>
<td></td>
<td>◗ Turn MicroWeave off.</td>
</tr>
<tr>
<td></td>
<td>◗ Turn High Speed on.</td>
</tr>
<tr>
<td></td>
<td>◗ Choose No Halftoning.</td>
</tr>
<tr>
<td></td>
<td>◗ Choose Black ink.</td>
</tr>
<tr>
<td></td>
<td>See Chapters 1 and 2 for more information.</td>
</tr>
<tr>
<td>Your system doesn’t have enough resources.</td>
<td>◗ Clear space on your hard disk drive or run a defragmentation utility.</td>
</tr>
<tr>
<td></td>
<td>◗ Don’t run too many applications at the same time.</td>
</tr>
<tr>
<td></td>
<td>◗ Turn off virtual memory.</td>
</tr>
<tr>
<td></td>
<td>◗ Increase your system’s memory (RAM)</td>
</tr>
<tr>
<td>You’re using background printing on a Macintosh.</td>
<td>Choose Get Info from the File menu and increase the memory requirements for EPSON Monitor2. See Chapter 4 for more information. Or turn off background printing (you won’t be able to use Monitor2).</td>
</tr>
<tr>
<td>Your port settings are incorrect in Windows 95.</td>
<td>Change your default spool directory and disable port settings as described in Chapter 4.</td>
</tr>
</tbody>
</table>

Your printer switches to the modem port or won’t confirm on the printer port (Macintosh)

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Your system has extension conflicts.</td>
<td>Make sure AppleTalk® is inactive. In the Extensions Manager, disable the AppleShare, FileShare, and PrinterShare extensions. Set your printer and any unused printers to the printer port. Then restart your system.</td>
</tr>
<tr>
<td>You’re using an AppleTalk cable.</td>
<td>Make sure you’re using a standard Apple System Peripheral-8 cable, and it’s securely connected at both ends.</td>
</tr>
</tbody>
</table>

Your printer icon doesn't appear in the Chooser (Macintosh)

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Your system has extension conflicts.</td>
<td>In the Extensions Manager, disable Quick Draw GX. Make sure EPSON Monitor2 and EPSON Stylus Color are enabled, then restart your Macintosh.</td>
</tr>
</tbody>
</table>

When you select your printer in the Chooser, you see a message that it can't be used

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>A system crash may have corrupted your printer software.</td>
<td>In your Extensions folder, delete EPSON Stylus (EX), EPSON Monitor2, and the EPSON folder. Then reinstall the printer driver software.</td>
</tr>
</tbody>
</table>

You get a type 39 error on the Macintosh

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>You’re using System 7.5.2</td>
<td>Run a printer check as described on page 6-2. If the printer works correctly, remove and reinstall your printer driver software. To remove it, delete EPSON Stylus (EX), EPSON Monitor2, and the EPSON folder from your Extensions folder. Then reinstall the driver. You may also need to upgrade your system software.</td>
</tr>
</tbody>
</table>

Fixing Paper Problems

You can avoid most paper handling problems by doing the following:

- Use smooth, high-quality media designed for ink jet printers that meets the media specifications in the Appendix.
- Follow all loading and handling instructions included with the media.
- Load the media with the printable side face up, as described in the Quick Setup guide or Chapter 3.

If you have problems with paper feeding, paper jams, or ejected paper, check here for solutions.
Troubleshooting

**Paper doesn’t feed**

<table>
<thead>
<tr>
<th>Try this</th>
<th>Then do this</th>
</tr>
</thead>
</table>
| Remove the stack of paper from the sheet feeder | Check that the paper:  
- Isn’t curled or creased.  
- Isn’t too old (see Chapter 3 or your paper packaging for more information).  
- Isn’t loaded above the arrow on the left edge guide.  
- Isn’t jammed inside the printer. (If the paper out light is flashing, paper is jammed.)  
Then reload the paper as described in Chapter 3, making sure the left edge guide is adjusted to fit the paper’s width. |

**Multiple pages feed at the same time**

<table>
<thead>
<tr>
<th>Try this</th>
<th>Then do this</th>
</tr>
</thead>
</table>
| Remove the stack of paper. | Make sure the paper isn’t too thin (see the paper specifications in the Appendix).  
- Fan the edges of the stack of paper to separate the sheets.  
- Reload the paper as described in the Quick Setup guide and Chapter 3.  
- If too many copies of a page or document are printing, check the Copies settings in both the printer settings dialog box and your application program. See Chapter 1 for more information. |

**Paper jams inside the printer**

<table>
<thead>
<tr>
<th>Try this</th>
<th>Then do this</th>
</tr>
</thead>
</table>
| Turn off your printer, open the cover, and remove all the paper that’s inside, including any small pieces that may have torn off. | Reload the paper as described in the Quick Setup guide and Chapter 3. If your paper jams frequently, make sure you:  
- Use smooth, high-quality paper, loaded printable side up.  
- Fan the stack and then even the edges before loading it.  
- Don’t load paper above the arrow mark on the left edge guide.  
- Adjust the left edge guide to fit the width of your paper. |
**Paper doesn't eject fully or is wrinkled**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>If the paper doesn't eject fully, you may have set the wrong paper size.</td>
<td>Press the load/eject button to eject the paper. Then make sure you select the correct paper size in your application or printer software. (See the paper specifications in the Appendix for the paper sizes you can print with.)</td>
</tr>
<tr>
<td>If it's wrinkled when it comes out, the paper may be damp or too thin.</td>
<td>See the paper specifications in the Appendix for paper thicknesses you can print with, as well as environmental requirements for storage.</td>
</tr>
</tbody>
</table>

**Solving Miscellaneous Printout Problems**

If your printout results are not what you expected, try these solutions.

**Characters are incorrect or garbled**

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Your printer is not the Windows default printer.</td>
<td>Select your printer as the default Windows printer. See your Windows documentation or online help for instructions.</td>
</tr>
<tr>
<td>Your printer is not selected in the Macintosh Chooser.</td>
<td>Open the Chooser and select your printer. See the <em>Quick Setup</em> guide for instructions.</td>
</tr>
<tr>
<td>Printing is stalled in Spool Manager (Windows).</td>
<td>Delete the stalled print jobs in Spool Manager following the instructions in Chapter 4. Then try printing again.</td>
</tr>
<tr>
<td>If you’re using background printing on a Macintosh, spooled data may be corrupted.</td>
<td>Open the Extensions folder, EPSON folder, and Spool folder. Then delete any queued files. Increase the memory requirements for EPSON Monitor2, following the instructions in Chapter 4.</td>
</tr>
<tr>
<td>AppleTalk is activated on a Macintosh.</td>
<td>If your printer is connected to the printer port, open the Chooser and make sure AppleTalk is inactive.</td>
</tr>
<tr>
<td>The interface cable is not securely connected.</td>
<td>Turn off your printer and computer. Then make sure the cable is connected securely and meets the printer’s specifications.</td>
</tr>
<tr>
<td>You’re using a switch box with your printer.</td>
<td>Connect the printer directly to your computer and try printing again.</td>
</tr>
</tbody>
</table>
## Troubleshooting

### The margins are incorrect

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Margins are set incorrectly in your software application.</td>
<td>Check your software documentation for instructions on selecting the correct margins for your paper size. Make sure the margins are within the printable area of the page. See the Appendix for more information.</td>
</tr>
<tr>
<td>Paper settings in the printer software are incorrect for your paper size.</td>
<td>Select the correct paper settings for your paper size. Make sure the Printable Area setting is correct for your project. See Chapters 1 and 3 for more information.</td>
</tr>
</tbody>
</table>

### The image is inverted as if viewed in a mirror

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>You used a Flip Horizontal option in your application software or the printer software.</td>
<td>Turn off the Flip Horizontal or mirror setting in your application software or the printer software. See Chapter 2 for information.</td>
</tr>
</tbody>
</table>

### The printer prints blank pages

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Your printer is not the Windows default printer.</td>
<td>Select your printer as the default Windows printer. See your Windows documentation or online help for instructions.</td>
</tr>
<tr>
<td>Your printer is not selected in the Macintosh Chooser.</td>
<td>Open the Chooser and select your printer. See the Quick Setup guide for instructions.</td>
</tr>
<tr>
<td>Paper settings in the printer software are incorrect for your paper size.</td>
<td>Select the correct paper settings for your paper size. See Chapter 1 for more information.</td>
</tr>
<tr>
<td>The print head nozzles are clogged.</td>
<td>Clean the print heads following the instructions in Chapter 5.</td>
</tr>
</tbody>
</table>
## Something on the page is wrong or missing

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Settings in your application software are incorrect.</td>
<td>Adjust the settings in your application</td>
</tr>
<tr>
<td>The interface cable is not connected properly.</td>
<td>Make sure the cable is securely connected to both the printer and computer.</td>
</tr>
<tr>
<td>You have the wrong port selected on your Macintosh.</td>
<td>If your Macintosh has only one serial port, open the Chooser, click the EPSON Stylus (EX) icon, and then select the modem port.</td>
</tr>
<tr>
<td>Your Macintosh has a built-in modem.</td>
<td>Connect the interface cable to the printer port. Then open the Chooser, click the EPSON Stylus (EX) icon, and then select the printer port.</td>
</tr>
</tbody>
</table>
Specifications

Printing

- **Printing method**: EPSON's exclusive drop-on-demand Micro Piezo ink jet technology
- **Nozzle configuration**: 32 nozzles × 6 (black, cyan, magenta, yellow, light cyan, light magenta)
- **Printable columns and printing speeds**: 20 inches per second (printable area 8.26 inches)

<table>
<thead>
<tr>
<th>Print quality</th>
<th>Available dots</th>
</tr>
</thead>
<tbody>
<tr>
<td>180 dpi</td>
<td>1488</td>
</tr>
<tr>
<td>360 dpi</td>
<td>2976</td>
</tr>
<tr>
<td>720 dpi</td>
<td>5952</td>
</tr>
</tbody>
</table>

- **Resolution**: Maximum 720 dpi × 720 dpi
- **Print direction**: Bidirectional with logic seeking
- **Control code**: ESC/P Raster™
- **Line spacing**: 1/6 inch, programmable in 1/360-inch increments
- **Paper feed speed**: 66.6 milliseconds per 1/6-inch line
- **Input buffer**: 64K B
- **Character tables**: The characters for PC 437 (US, Standard Europe) and PC 850 (Multilingual) can be selected using the following procedure:

  When the printer is off, hold down the cleaning button and press the power button. Then release both buttons. This changes the character table to PC 850. Repeat the procedure to change it back to PC 437. You can run a printer check as described on page 6-2 to verify the current character table.

</tbody>
</table>

**Note:**
Since the quality of any particular brand or type of paper may be changed by the manufacturer at any time, EPSON cannot attest to the quality of any non-EPSON brand or type of paper. Always test samples of paper stock before purchasing large quantities or printing large jobs.

Poor quality paper may reduce print quality and cause paper jams and other problems. If you encounter problems, switch to a higher grade of paper.

Do not load curled or folded paper.

EPSON ink jet papers and other special media are only usable under normal conditions:
- Temperature: 59 to 77°F (15 to 25°C)
- Humidity: 40 to 60% RH

Printouts on EPSON Photo Quality Glossy Film should be stored under the following conditions:
- Temperature: 59 to 86°F (15 to 30°C)
- Humidity: 20 to 60% RH
Printable area

A: The minimum top margin is 0.12 inch (3.0 mm).
When loading multiple sheets of EPSON Photo Quality Glossy Film, the minimum top margin is 1.2 inches (30 mm).

B: The minimum left margin is 0.12 inch (3.0 mm).
The minimum right margin for letter and legal size paper is 0.35 inch (9.0 mm). The minimum right margin for other sizes of paper is 0.12 inch (3.0 mm).
The minimum right margin for envelopes is as follows:
0.28 inch (7 mm) for DL envelopes.
1.10 inches (28 mm) for No. 10 envelopes.
0.12 inch (3 mm) for C6 envelopes.

C: The minimum bottom margin is 0.54 inch (14.0 mm).

Note:
Always load paper into the sheet feeder short edge first. However, envelopes should be loaded long edge first.
Specifications

**Ink Cartridge**

<table>
<thead>
<tr>
<th>Specification</th>
<th>Black ink cartridge (S020093)</th>
<th>Color ink cartridge (S020110)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Color(s)</td>

<td>2.0 (W) × 2.1(D) × 1.5 (H) inches 51.4 (W) × 52.7 (D) × 38.5 (H) mm</td>
</tr>
</tbody>
</table>

* The print capacity may vary, depending on how often you use the print head cleaning function.

** It thaws and is usable after approximately 3 hours at 77 °F (25 °C).

Caution:
To ensure good results, use genuine EPSON ink cartridges. Other products may cause damage to your printer not covered by EPSON’s warranty.

Don’t use an ink cartridge if the date on the package has expired.

**Mechanical**

- **Paper feed method**
  - Friction
- **Paper path**
  - Sheet feeder, rear entry
- **Sheet feeder capacity**
  - 100 sheets at 17 lb (64 g/m²) paper
- **Dimensions**
  - **Storage**
    - Width: 16.9 inches (429 mm)
    - Depth: 10.8 inches (275 mm)
    - Height: 6.6 inches (168 mm)
  - **Printing**
    - Width: 16.9 inches (429 mm)
    - Depth: 24.1 inches (613 mm)
    - 27.4 inches (695 mm) when printing transparencies
    - Height: 12.2 inches (309 mm)
    - 7.7 inches (196 mm) when printing transparencies
- **Weight**
  - 11.5 pounds (5.2 kg) without the ink cartridges

<td></td>
</tr>
</tbody>
</table>

Note:
Check the label on the back of the printer for the voltage of your printer.

**Environmental**

**Temperature**
- Operation: 50 to 95 °F (10 to 35 °C)
- Storage: -4 to 140 °F (-20 to 60 °C), stored in shipping container
  - 1 month at 104 °F (40 °C)
  - 120 hours at 140 °F (60 °C)

**Humidity**
- Operation: 20 to 80% RH (without condensation)
- Storage: 5 to 85% RH (stored in shipping container, without condensation)

**Safety Approvals**

**Safety standards**
- UL 1950 with D3, CSA C22.2 No.950 with D3

**EMC**
- FCC part 15 subpart B class B, CSA C108.8 class B

**Interface**

Your printer is equipped with an 8-bit parallel interface and a serial interface.

**Parallel interface**

**Forward channel**
- Data format: 8-bit parallel, IEEE-1284 compatibility mode
- Synchronization: STROBE pulse
- Handshake timing: BUSY and ACKNLG signals
- Signal level: TTL compatible
- Connector: 57-30360 Amphenol connector or equivalent
Specifications

Reverse channel
- Transmission mode: IEEE-1284 Nibble mode
- Adaptable connector: 57-30360 Amphenol Connector or equivalent
- Synchronization: Refer to the IEEE-1284 specification
- Handshaking: Refer to the IEEE-1284 specification
- Signal level: IEEE-1284 Level 1 device
- Data transmission timing: Refer to the IEEE-1284 specification

Serial interface
- The printer’s built-in serial interface is based on the RS-423 standard.
- This interface has the following characteristics:
  - Standard: Based on RS-423
  - Synchronization: Synchronous
  - Bit rate: Approx. 900 Kbps
  - Handshaking: X-ON/X-OFF DTR protocol
  - Word format:
    - Data bit: 8 bits
    - Parity bit: None
    - Start bit: 1 bit
    - Stop bit: 1 bit
  - Connector: 8-pin mini-circular connector
  - Recommended cable: Apple System Peripheral-8 cable (Part number M0197)

Initialization
- The printer can be initialized (returned to a fixed set of conditions) in these ways:
  - Hardware initialization
    * The printer is turned on.
    * The printer receives an INIT signal from the parallel interface.
  - Software initialization
    * Software sends the ESC @ (initialize the printer) command.

Hardware initialization
- When the printer is turned on, the printer mechanism is initialized, the input and print buffers are cleared, and all settings return to their default values. However, the printer mechanism is not initialized if the printer is turned on within 10 seconds after being turned off. In this case, the printer caps the print head, and ejects any paper in the paper path.

Software initialization
- Software initialization clears the print buffer and returns all settings to their default values. However, software initialization does not initialize the printer mechanism or clear the data buffer.
Glossary

banding The horizontal lines that sometimes appear in a printed image. See also MicroWeave.

bidirectional Moving the print head from left to right and right to left, for faster output.

buffer The portion of the printer’s memory used to store data before printing it.

character table A collection of letters, numbers, and symbols that provides you with the characters used in a particular language.

CMYK Cyan (blue-green), magenta, yellow, and black. These colored inks are used to create printed colors. The addition of light magenta and light cyan increases the accuracy of photographic images for virtual continuous-tone printing.

ColorSync Macintosh software that is designed to help you get WYSIWIG (what you see is what you get) output. This software prints colors as you see them on your screen.

default A value or setting that takes effect when the equipment is turned on, reset, or initialized.

dithering A halftoning method in which dots are arranged in an orderly pattern. Dithering works best for printing images with solid colors, such as charts and graphs. See also halftoning.

dpi Dots per inch. The dpi measures the resolution. See also resolution.

driver A software program that sends instructions to a computer device to tell it what to do. For example, your printer driver accepts print data from your image processing application and sends instructions to the printer on how to print this data.
Glossary

**Error Diffusion**

This halftoning setting smooths out edges by randomly placing dots of varying colors. This has the opposite effect of the Finest Detail setting.

**ESC/P Raster**

A version of the ESC/P (Epson Standard Code for Printers) command language, which gives you control of your printer from your computer. Commands in this language produce enhanced graphics printing.

**Finest Detail**

This setting automatically makes your printed images sharper and clearer. This has the opposite effect of the Error Diffusion setting. Be aware that this may increase the time required for printing.

**Font**

A style of type designated by a name.

**Gamut**

The range of colors that a device (such as a printer or monitor) can accurately reproduce.

**Grayscale**

A scale of shades of gray from black to white. Grayscale is used to represent colors when printing with black ink only.

**Halftoning**

A method of using dot patterns to represent an image. Halftoning makes it possible to produce varying shades of gray using only black dots, or a nearly infinite array of colors using only a few colors of dots.

**Host System**

The computer connected directly to the printer in a network.

**Initialization**

Process that returns the printer to its defaults (fixed set of conditions). This happens every time you turn on or reset the printer.

**Inkjet**

A method of printing in which images, lines, letters, or symbols are formed by precisely spraying ink onto paper.

**Interface**

The connection between the computer and a peripheral such as a printer. Some printers have two interfaces, parallel and serial. A parallel interface transmits data one byte, or eight bits, at a time. A serial interface transmits data one bit at a time.
media  Materials upon which data is printed, such as envelopes, plain paper, special paper, and transparencies.

Micro Piezo  Ink jet technology that uses an electronic pulse to precisely force the ink through the print head. This results in smaller, cleaner dots, sharp lines, and crisp text.

MicroWeave  Printing technology that produces images in fine increments to reduce the possibility of banding. See also banding.

parallel interface  See interface.

print queue  Print jobs that are sent to the printer while it is busy are stored in a waiting line, or print queue, until they can be printed.

print server  The computer connected to the printer. It receives the jobs and then distributes them to the assigned printer. It also holds extra print jobs while the printer is busy. See also print queue.

printable area  The area of a page on which the printer can print. It is smaller than the physical size of the page due to margins.

printer driver  See driver.

RAM  Random Access Memory. The area of your computer's memory that runs programs and stores data.

reset  To return a printer to its defaults either by sending a command or an INIT signal, or by turning the printer off and then back on.

resolution  The number of dots per inch used to represent an image.

ROM  Read Only Memory. Memory area in your printer or computer that cannot be modified. ROM retains its contents when you turn off the printer or computer.

saturation  The depth or vibrancy of a color; the amount of gray.

serial interface  See interface.
Glossary

spool The process by which the printer driver converts the print data into codes that your printer understands. This data is then sent to the printer directly or to the print server.

Spool Manager An EPSON software program that converts print data into codes that your printer understands. See also spool.

Status Monitor An EPSON software program that displays the printer’s status, such as paper out or the amount of ink remaining before printing.
