Important Safety Information

**WARNING**: Never look into the projector lens when the lamp is turned on; the bright light can damage your eyes. Never let children look into the lens when it is on. Never open any cover on the projector, except the lamp and filter covers. Dangerous electrical voltages inside the projector can severely injure you. Except as specifically explained in this *User’s Guide*, do not attempt to service this product yourself. Refer all servicing to qualified service personnel.

**WARNING**: The projector and its accessories come packaged in plastic bags. Keep plastic bags away from small children to avoid any risk of suffocation.

**Caution**: When you replace the lamp, never touch the new lamp with your bare hands; the invisible residue left by the oil on your hands may shorten the lamp life. Use a cloth or glove to handle the new lamp.

Welcome

The PowerLite® 1720/1730W is an easy-to-use projector that weighs less than 4 pounds. The projector offers up to 3000 lumens of white and color light output (brightness). You can connect it to a wide range of computers and video sources.

Easy setup, control, and security:

- 6-second startup time and Instant Off® feature for fast setup and shut down
- Automatic digital keystone correction
- 1.2x optical zoom lens for flexible placement and positioning
- Security features including password, user’s logo, and the ability to lock the projector buttons
- A/V Mute slide to block the lens and save lamp life when you want to temporarily stop projecting
Using Your Documentation

This electronic User’s Guide provides detailed instructions on using your projector.

Please follow these guidelines as you read through this manual:

- **Warnings** must be followed carefully to avoid bodily injury.
- **Cautions** must be observed to avoid damage to your equipment.
- **Notes** contain important information about your projector.
- **Tips** contain additional projection hints.

Getting More Information

Need tips on giving presentations? Quick steps for setting up your projector? Here’s where you can look for help:

- **Quick Setup sheet**
  Gives you the instructions you need to get your projector up and running if you are connecting to a notebook, MacBook®, PowerBook®, or iBook® computer.

- **Built-in help system**
  Provides assistance for common problems. Available from the ?Help button on the projector or the remote control. See page 76 for details.

- **epson.com/support**
  Download FAQs and e-mail your questions to Epson support.

- **PrivateLine support**
  If you still need help after checking this User’s Guide and the sources listed above, you can use the Epson PrivateLine® Support service to get help fast. Call (800) 637-7661 and enter the PIN on the PrivateLine card. Or take advantage of Epson’s automated support services 24 hours a day. See page 87 for more information.

- **presentersonline.com**
  Includes a library of articles covering presentation tips, tricks, and technology. The site provides templates, clip art and sound clips,
as well as Presenters Services to use on the road. Even more resources and services are available if you register to join the Presenters Club—and it’s free.

Registration and Warranty

Your projector comes with a warranty that lets you project with confidence. For details, see the warranty statement included with your projector.

In addition, Epson offers free Extra Care℠ Road Service. In the unlikely event of an equipment failure, you won’t have to wait for your unit to be repaired. Instead, Epson will ship you a replacement unit anywhere in the United States or Canada, usually via overnight delivery. See the brochure included with your projector for details.

To register, simply fill out the registration card and mail it to Epson. Or you can register online at http://www.epson.com/webreg. Registering also lets you receive special updates on new accessories, products, and service.
Unpacking the Projector

After unpacking the projector, make sure you have all the parts shown below:

- Projector
- PDF manual and registration CD-ROM
- Remote control and 2 AA batteries
- Audio adapter
- Security sticker
- Carrying case
- Power cable
- VGA computer cable
- USB cable

Save all packaging in case you need to ship the projector. Always use the original packaging (or the equivalent) when you need to send the projector to another location. If you are moving the projector by hand, use the carrying case. See page 74 for transportation instructions.
**Additional Components**

Depending on how you plan to use the projector, you may need additional components:

- To receive an S-video signal, you’ll need an S-video cable. One may be provided with your video equipment, or you can purchase one from Epson; see below.

- To receive a component video signal from a VCR or other video device, you’ll need an component-to-VGA video cable. You can purchase one from Epson; see below.
Optional Accessories

To enhance your use of the projector, Epson provides the following optional accessories:

You can purchase screens, carrying cases, or other accessories from an Epson authorized reseller. To find the nearest reseller, call 800-GO-EPSON (800-463-7766). Or you can purchase online at www.epsonstore.com (U.S. sales) or www.epson.ca (Canadian sales).
Displaying and Adjusting the Image

Whether you’re presenting from a computer or video equipment, you need to follow some basic steps to display your image on the screen.

Follow the guidelines in this chapter for:

■ Positioning the projector
■ Turning the projector on and off
■ Selecting the image source
■ Troubleshooting display problems
■ Adjusting the image
Positioning the Projector

If the projector isn’t already installed in the room you’re using, you’ll probably want to place it on a table in front of the screen. This lets you stand in the front of the room, face the audience, and remain close enough to the equipment to be able to control it. Try to leave as much space as possible between the projector and the screen to get a good-size image.

Use the figures below to help you determine placement. (The image shown below is projected at a 4:3 aspect ratio, but the PowerLite 1730W is capable of displaying images as wide as 16:10.) Image size increases with distance, but can vary depending on how you position the zoom ring and whether you’ve adjusted the image with other settings.

Also keep these considerations in mind:

- Place the projector on a sturdy, level surface.
- Make sure there is plenty of space for ventilation around and under the projector. Do not set the projector on top of anything that could block the vents.
- Make sure the projector is within 10 feet of a grounded electrical outlet or extension cord.
Ideally, you should place the projector directly in front of the center of the screen, facing it toward the screen squarely. The base of the lens should be at about the level of the bottom of the screen.

If you place the projector below screen level, you’ll have to tilt it up by extending the front adjustable foot. This causes the image to become “keystone” shaped, but you can correct the distortion by pressing the buttons on the projector. See page 23 for detailed information about correcting the image shape.

For instructions on installing the projector in a permanent location, such as a theater or conference room, see page 89.

**Turning the Projector On and Off**

Make sure your projector and any computer or video equipment are connected as described on page 39. Turn on your connected equipment before starting the projector so it can automatically detect and display the image source. If you turn on the projector first, or have multiple pieces of connected equipment, you may have to select the image source manually (see page 18).

---

**note**

After positioning the projector, you may want to connect a Kensington MicroSaver® anti-theft device to the lock port on the projector. You can purchase this from Epson; see page 12.
### Turning On the Projector

Follow these steps to turn on the projector:

1. Open the A/V Mute slide (lens cover).

2. Plug one end of the power cable into the projector, and the other end into an electrical outlet.

   ![Power light](image)

   *The **Power** light turns orange.*

---

**Note**

You can set the projector to automatically turn off the lamp and enter “sleep mode” when it has not received any signals or the A/V Mute slide remains closed for a period of time. This conserves electricity, cools the projector, and extends the life of the lamp. To enable sleep mode, see page 64.
3. Press the red \( \textcolor{red}{\text{Power}} \) button on the remote control or on top of the projector.

The projector beeps once and the \( \textcolor{red}{\text{Power}} \) light flashes green as the projector warms up, then an image begins to appear. When the \( \textcolor{red}{\text{Power}} \) light stops flashing and remains green, the projector is ready for use.

4. If you are prompted to enter a password, see page 58.

**Using the Direct Power On Function**

The Direct Power On function enables faster setup. The projector will start up automatically when you plug it in; you won’t have to press the \( \textcolor{red}{\text{Power}} \) button.

Follow these steps to enable Direct Power On:

1. Press the **Menu** button on the remote control and select the **Extended** menu.

2. Choose **Operation** and press **Enter**.

3. Choose **Direct Power On** and press **Enter**.

4. Highlight **On** and press **Enter**.

5. Press **Esc** or **Menu** to exit. The setting will take effect the next time you plug in the projector.

**warning**

Never look into the lens when the lamp is on. This can damage your eyes, and is especially dangerous for children.

**note**

If a power outage occurs when Direct Power On is enabled and the projector is plugged in, the projector will restart when the power is restored.
Shutting Down the Projector

This projector incorporates Instant Off technology. To turn it off, you can press its Power button as described below, unplug it, or turn off a power switch that supplies power to the projector. You don’t have to wait for the projector to cool off first.

1. To turn off the projector, press the Power button on the remote control or projector.
   
   You see a confirmation message.
   
   (If you don’t want to turn it off, press any other button.)

2. Press the Power button again. The projection lamp turns off and you can unplug the power cord.
   
   If you want to turn the projector on again, make sure the orange Power light is not flashing, then press the Power button.

3. If you extended the adjustable front foot, press up on the foot release lever to retract it.

Selecting the Image Source

Selecting the image source lets you switch between images input from different pieces of connected equipment (such as a computer or DVD player).

If you don’t see the image you want, press the Search button on the remote control or the Source Search button on the projector until you see the image you want to project.
You can also use the Source buttons on the remote control to switch between devices connected to the ports identified on each button. (The EasyMP button does not work with the PowerLite 1720/1730W.)

Troubleshooting Display Problems

Follow these guidelines if you’re having trouble displaying an image.

You Can’t Project an Image

If you don’t see the image you are trying to project, try the following:

- Make sure the cables are connected correctly, as described beginning on page 39.
- Make sure the Power light is green and not flashing and the A/V Mute slide is open.
- If you’ve connected more than one computer and/or video source, you may need to press the Source Search button on the projector’s control panel or Search button on the remote control to select the correct source. (Allow a few seconds for the projector to sync up after pressing the button.)
- If you’re using a PC notebook, press the function key on your keyboard that lets you display on an external monitor. It may be labeled CRT/LCD or have an icon such as ✎/◯. You may have to hold down the Fn key while pressing it. Allow a few seconds for the projector to sync up after changing the setting.
- See page 80 for more solutions.
The Projector and Notebook Don’t Display the Same Image

If you’re projecting from a notebook, and you can’t see your image on the projection screen and on your computer at the same time, follow these guidelines.

If you’re using a PC notebook:

- On most systems, there’s a function key that lets you toggle between the LCD screen and the projector, or display on both at the same time. It may be labeled CRT/LCD or have an icon such as \(\text{CRT/LCD}\). You may have to hold down the \(\text{Fn}\) key while pressing it. Allow a few seconds for the projector to sync up after changing the setting.

- If the function key doesn’t permit you to display simultaneously on both screens, you should check your monitor settings to make sure both the LCD screen and the external monitor port are enabled.

  From the Control Panel, open the Display utility. In the Display Properties dialog box, click the Settings tab, then click Advanced. The method for adjusting the settings varies by brand; you may need to click a Monitor tab, then make sure the external Monitor port is set as your primary display and/or enabled. See your computer’s documentation or online help for details.

If you’re using Mac OS X:

You may need to set up your system to display on the projector screen as well as the LCD screen. Make sure your projector is connected and follow these steps:

1. From the Apple\(^\circledR\) menu, select System Preferences, then select Displays.

2. Click Detect Displays.

3. Make sure the VGA Display or Color LCD dialog box is selected.
4. Click the **Arrangement** (or **Arrange**) tab.

5. Make sure the **Mirror Displays** checkbox is selected.
**Adjusting the Image**

Once you see your image, you need to make certain adjustments:

- If the image is too high or too low, you can reposition it. See below.
- To focus or zoom your image, see page 23.
- If the image isn’t square, see page 23.
- If a computer image displays incorrectly, see page 25.
- If you need to fine-tune the image and/or sound, see page 49.

**Adjusting the Height of Your Image**

If the image is too low on the screen, you can use the front adjustable foot to raise it.

1. Stand behind the projector. Press the foot release lever up and lift the front of the projector.

2. Once the image is positioned where you want it, release the lever to lock the foot in position.

3. If necessary, you can fine-tune the height or level of the image by turning the projector’s adjustable rear feet.

Raising the projector causes the image to distort or “keystone,” but you can correct the shape as described on page 23.
**Focusing and Zooming Your Image**

Turn the focus ring on the projector to sharpen the image.

Turn the zoom ring on the projector to reduce or enlarge the image.

If the image still isn’t large enough, you may need to move the projector farther away from the screen. You can also use the E-Zoom buttons on the remote control to zoom in on a portion of the image. See page 31 for instructions.

**Adjusting the Image Shape**

In most cases, you can maintain a square or rectangular image by placing the projector directly in front of the center of the screen with the base of the lens level with the bottom of the screen.

Even if the projector is slightly tilted (within a range of 30° up or down), the projector has an automatic keystone correction function that detects and corrects vertical keystone distortion.

It takes about one second after projection starts for the image to be corrected. During this time, a vertical keystone correction gauge appears on the screen.

If your image is still distorted, you can correct it using the Keystone buttons on the projector’s control panel or the projector’s Setting menu.
Using Keystone Correction

To adjust your image when it is wider on the top or bottom, do the following:

- Press one of the two keystone correction buttons on the projector’s control panel, as shown below. Continue pressing the button until you are satisfied with the shape of the image.

![Keystone Correction Buttons](image)

![Keystone Correction Buttons](image)

- Or press the Menu button on the remote control or projector, select the Setting menu, and press Enter.

![Setting Menu](image)

![Setting Menu](image)

From the Setting menu, select Keystone and press Enter. Use the pointer button on the remote control to adjust the keystone setting as needed.

If the image quality declines (for example, lines or edges look jagged), reduce the sharpness setting. See page 53.
Correcting Computer Images

If you’re connected to a computer and the image doesn’t look right, press the Auto button on the remote control or the Enter button on the projector. This automatically resets the projector’s tracking, sync, resolution, and position settings.

If the Auto button doesn’t correct the problem, you may need to adjust the tracking or sync using the projector’s Signal menu. See page 55 for more information.

**Note**
The Auto button works only with computer images projected through the VGA port.
Using the Remote Control

The projector includes a number of tools to enhance your presentation. All of them can be accessed using the remote control, which lets you operate the projector from anywhere in the room—up to 20 feet away.

You can use the remote control to adjust the picture and sound (page 29) or to adjust the color mode for various environments (page 33). You can also use it as a wireless mouse when projecting from a computer (page 35) or as a pointer to highlight your presentation (page 36).

This chapter covers:

- Using the remote control
- Controlling the picture and sound
- Operating your computer with the remote control
- Highlighting your presentation
- Operating two or more projectors with the remote control
Using the Remote Control

Follow these tips for using the remote control:

- Point the remote control at the front of the projector or at the screen.
- Stand within 20 feet of the projector.
- Avoid using the remote under bright fluorescent lamps or in direct sunlight, or the projector may not respond properly.

Replacing the Batteries

Replace the batteries as described below:

1. Turn the remote control over.
2. Press the tab on the battery cover to open it.
3. Install two AA batteries, inserting the + and – ends as shown.
4. Close the cover, pressing it down until it snaps into place.

Note

If a button is pressed longer than 30 seconds, the remote control stops operating to conserve power. When you release the button, normal operation resumes.

Caution

When replacing batteries, take the following precautions:

- Replace the batteries as soon as they run out. If the batteries leak, wipe away battery fluid with a soft cloth. If fluid gets on your hands, wash immediately.
- Do not expose batteries to heat or flame.
- Dispose of used batteries according to local regulations.
- Remove the batteries if you won’t be using the projector for a long period of time.
**Controlling the Picture and Sound**

You can use the remote control to preview and select your picture sources, temporarily turn off the picture and sound, freeze the action, zoom in on the picture, and adjust the volume.

**Switching Between Picture Sources**

If your projector is connected to more than one computer and/or video source, you can switch between the different sources:

- The easiest way to select your source is to press the **Search** button on the remote control (or the **Source Search** button on the projector) repeatedly until you see the image you want on the screen.

- On the remote control, there are four **Source** buttons. Use them to switch between equipment connected to the port identified on each button (The **EasyMP** button does not work with the PowerLite 1720/1730W.)

After you select a source, the screen goes dark for a moment before the image appears.
**Turning Off the Picture and Sound**

You can use the A/V Mute button on the remote control to turn off the image and sound. This does the same thing as the A/V Mute slide (shown on page 16) and is useful if you want to temporarily redirect your audience’s attention.

- To turn off the picture and sound, press the A/V Mute button. The screen turns black.
- To turn the image and sound back on, press the button again.

You can have the screen turn blue when you press the A/V Mute button. You can also have an image, such as a company logo, display on the screen (see page 60).

**Stopping Action**

You can use the remote control to stop the action in your video or computer image.

- To stop the action and keep the current image on the screen, press the Freeze button. The sound continues.
- To restart it, press the Freeze button again.
**Zooming Part of Your Image**

You can zoom in on a portion of the image using the E-Zoom buttons on the remote control.

1. Press the **E-Zoom** button on the remote control.
   
   You see a crosshair indicating the center of the zoom-in area.

2. Use the pointer button to position the crosshair.

3. Continue pressing the **E-Zoom** button to enlarge the selected area up to 4× magnification.

4. While the image is enlarged, you can:
   
   - Use the pointer button to move around the screen.
   - Press the **E-Zoom** button to zoom out.

5. When done, press the **ESC** button to return the image to its original size.

**Controlling the Volume**

To change the volume, press the or button on the remote control or projector.

You can also adjust the volume using the projector’s menu system. See page 56.

---

**note**

To temporarily shut off the sound and picture, press the A/V Mute button or close the A/V Mute slide.
**Adjusting the Aspect Ratio**

You can use the Aspect button on the remote control to adjust how an image fits into the display area. Each time you press the button, the projector changes to the next setting.

When Connected to Video Equipment

If you're projecting from video equipment such as a DVD player, set the projector’s Aspect setting to match that of the player. For example, if the video player is set to output images at a 16:9 aspect ratio, set the projector’s Aspect setting to 16:9 so they match. If the player outputs images at a 4:3 aspect ratio, select 4:3 (PowerLite 1720) or Normal (PowerLite 1730W).

Note that the projector’s native aspect ratio (XGA or WXGA, depending on the model) is narrower than 16:9. Therefore, widescreen movies and HDTV broadcasts will display with black bars at the top and bottom when 16:9 is selected as the Aspect setting. For the PowerLite 1730W, you can select Full to stretch the image vertically to fill the whole projection area.
When Connected to a Computer

For computer images, Normal is usually the best setting to select. This displays the image at the largest possible size without stretching it. For computers with wide-panel WXGA displays, the PowerLite 1730W displays the image at WXGA resolution, making full use of the display area; likewise, the PowerLite 1720 displays XGA images to their best advantage.

Depending on your computer display and projector model, you may see black bars at the edges. In that case, try selecting 4:3 (PowerLite 1720 only) or 16:9. The PowerLite 1730W also lets you select:

- Full to stretch the image to fill the whole projection area
- Zoom to fit the image in one dimension only, with the other dimension cut off
- Through to display the image without stretching or scaling it

If the resolution of the image is the same as the projector’s, changing the Aspect setting has no effect.

Adjusting the Color Mode

You can use the Color Mode button on the remote control to adjust the color, brightness, and other aspects of your image. This lets you quickly adjust the image for various uses.

Press the button repeatedly to select from the following settings:

Game: For increased brightness and contrast when playing video games or watching TV in a bright room. If you notice video delays during high-speed gaming, turn off the Progressive setting (see page 55).

Presentation: For computer presentations in a bright room with color graphics.

Text: For computer presentations in a bright room with black-and-white text and graphics.

Theatre: For watching movies in a dark room.

Photo: For vivid, high-contrast still images in a bright room (computer images only).
**Sports:** For vivid TV images projected in a bright room (video, S-video, or composite video only).

**sRGB:** For matching the color palette of standard sRGB computer displays

**Blackboard:** For projecting accurate colors on a green chalkboard (adjusts the white point).

**Customized:** For manual color adjustment. (See “Six-Axis Color Adjustment” on page 53).
Operating Your Computer with the Remote Control

If you connect a computer to the projector with a USB cable, as described on page 41, you can use the remote control in place of your computer’s mouse. This gives you more flexibility when delivering slideshow-style presentations, since you won’t have to stand next to the computer to change slides.

■ Use the Page Up and Down buttons to move through a slideshow.

■ Use the \( \text{Page Up} \) and \( \text{Page Down} \) buttons to move the cursor on the screen.

■ Press the Enter button once to left-click, or press it twice to double-click. Press the Esc button to right-click.

■ To drag-and-drop, hold down the Enter button. Then use the \( \text{Page Up} \) and \( \text{Page Down} \) buttons to drag the object. When it’s where you want it, press Enter to release it.
Highlighting Your Presentation

You can display a pointer to call out important information on the screen. If you want to customize the pointer tool, you can choose from three alternative shapes.

**Using the Pointer Tool**

1. To activate the pointer tool, press the Pointer button on the remote control. A pointer appears on the screen.

   ![Pointer Image]

   If you prefer to use a different style of pointer, see the instructions in the next section.

2. Use the Pointer button on the remote control to position the pointer on the screen.

3. When you’re done using the pointer, press the Pointer or Esc button to clear the screen.

**Customizing the Pointer Tool**

You can change the appearance of the pointer by choosing from three alternative shapes.

1. Press the Menu button on the remote control, highlight the Settings menu, highlight Pointer Shape, and press Enter. You can select one of the pointer shapes shown at the left.

   ![Menu Image]

2. Select the shape you want and press Enter.

3. Highlight Return and press Enter.

4. Press Menu to exit from the menu system.
Operating Two or More Projectors with the Remote Control

If you’re using more than one projector, you can control all the projectors—or just selected ones—by using the projector and remote control ID system. First assign a unique ID number to each projector. Then set the remote control to match the ID of the projector you want to operate. This lets you control it without affecting the others.

Setting the Projector ID

The projector’s default ID is set to Off. This lets it respond to commands from any remote control. To change the ID, follow these steps:

1. Press the Menu button on the remote control. You see the projector’s menu screen.
2. Select Extended > Projector ID.
3. Use the pointer button to highlight the new ID, and press Enter to select it.
4. When done, press Menu to exit the menu system.

Checking the Projector ID

To check the ID of a specific projector:

1. Point the remote control at the projector you want to check.
2. Press the ID button on the remote control. You see a message on the screen, showing the projector’s ID:

<table>
<thead>
<tr>
<th>Projector ID</th>
<th>Remote Control</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>On</td>
</tr>
<tr>
<td></td>
<td>Off</td>
</tr>
</tbody>
</table>

If the message says the remote control is “On,” then you can use the remote control to operate that projector. If it says “Off,” then you have to change the ID of the remote control before operation is possible, as described in the next section.

### Setting the Remote Control ID

The remote control’s default ID is zero. This lets it operate any projector. To set it to operate only those projectors with a specific ID, follow these steps:

1. Press and hold the ID button on the remote control.

2. While holding the ID button, press the numbered button on the remote control (1 through 9) that corresponds to the ID of the projector(s) you want to operate. Selecting zero lets you control all projectors.

---

**note**

If you’re using a remote control ID other than the default ID of zero, you have to set the ID each time you turn on the projector.
Connecting to Computers and Other Equipment

This chapter tells you how to connect the projector to a notebook or desktop computer, and/or to video equipment, such as a VCR, DVD player, or video camera.

Follow the instructions in this chapter on:

- Connecting to a computer
- Connecting video equipment
- Playing sound through the projector
Connecting to a Computer

You can connect the projector to any computer that has a standard video output (monitor) port, including desktop models, PC notebook computers, MacBook, PowerBook and iBook systems, and hand-held devices.

- To connect to your computer’s video port, see the instructions below.
- To control your presentation using the remote control as a “wireless mouse,” see page 41.

Connecting to the Video Port

You can connect to your computer using the VGA computer cable that came with the projector (the monitor port on your computer must be a mini D-sub 15-pin port).

1. Connect one end of the VGA computer cable to the projector’s blue Computer (Component Video) port, and the other end to your computer’s monitor port.

   **note**
   Make sure the Input Signal setting in the Signal menu is set to Auto or RGB (see page 55).

2. You can connect an optional stereo mini-jack audio cable to play sound through the projector (see page 47), or connect a USB cable to use the remote control as a mouse (see page 41).
3. When you’ve finished making any connections, see page 15 for instructions on turning on the projector and adjusting the image. Once the projector is turned on, select the image source: press the Search button on the remote control or the Source Search button on the projector’s control panel.

**Connecting the Cable for Remote Mouse Control**

If you’ve connected a computer as described in this chapter using the Computer (Component Video) port, you can use the projector’s remote control as a wireless mouse. This lets you control your computer and click through slideshow-style presentations, such as PowerPoint®, from up to 20 feet away (see page 35 for more information).

The wireless mouse function is supported on systems with a USB port running Windows® or Mac OS®.

1. Locate the USB cable that came with your projector.
2. Connect the square end of the cable to the projector’s Type B (square) USB port.
3. Connect the flat end of the cable to any available USB port on your notebook or desktop computer.
4. Press the **Computer** button on the remote control to select your computer as the source. (The wireless mouse function doesn’t work when other sources are selected.)

5. If necessary, configure your computer to work with a USB mouse. See your computer documentation for details.

---

### Connecting to Video Equipment

You can connect several video sources to the projector at the same time. Before starting, look at your video equipment to determine its available video output connections:

- If your video player has a yellow RCA-style video output connector, see “Connecting a Composite Video Source” on page 43.
- If your video player has an S-video connector, see “Connecting an S-Video Source” on page 44.
- If your video player has a component video port (three connectors labeled either Y/Cb/Cr or Y/Pb/Pr), see “Connecting a Component Video Source” on page 45.
- If your video player has an RGB video port (either a single connector for a VGA-style monitor cable or three connectors labeled R/G/B), see “Connecting an RGB Video Source” on page 46.

After connecting video cables, you may also want to connect an audio cable to play sound through the projector; see page 47.
Connecting a Composite Video Source

1. Locate an RCA-style video cable (one is usually provided with your video equipment or you can purchase one from an electronics dealer).

2. Connect the cable to the yellow video output connector on your player and the yellow Video connector on the projector:

3. If you want to play sound through the projector, see page 47 for instructions on connecting audio cables.

4. If you don’t need to make any other connections, see page 15 for instructions on turning on the projector and adjusting the image. Once the projector is turned on, select the image source: press the Search button on the remote control or the Source Search button on the projector’s control panel.
Connecting an S-Video Source

1. Locate an S-video cable (one is usually provided with your video equipment or you can purchase one from Epson; see page 12).

2. Connect the cable to the S-video connector on your player and the S-Video connector on the projector:

3. If you want to play sound through the projector, see page 47 for instructions on connecting audio cables.

4. If you don’t need to make any other connections, see page 15 for instructions on turning on the projector and adjusting the image. Once the projector is turned on, select the image source: press the Search button on the remote control or the Source Search button on the projector’s control panel.
Connecting a Component Video Source

You will need a component-to-VGA cable, or a component video cable and adapter, for this connection. You can order the component-to-VGA cable (ELPKC19) from Epson; see page 12 for more information.

1. Locate a component-to-VGA video cable or adapter.

2. Connect the cable to your player and the blue Computer (Component Video) connector on the projector. If you’re using an adapter, connect it to a standard component video cable as shown below.

3. If you want to play sound through the projector, see page 47 for instructions on connecting audio cables.

4. If you don’t need to make any other connections, see page 15 for instructions on turning on the projector and adjusting the image. Once the projector is turned on, select the image source: press the Search button on the remote control or the Source Search button on the projector’s control panel.

note
Make sure the Input Signal setting in the Signal menu is set to Auto or Component Video (see page 55).
Connecting an RGB Video Source

1. Locate the VGA computer cable provided with the projector.

2. Connect the cable to the video port on your player and the Computer (Component Video) port on the projector.

3. If you want to play sound through the projector, see page 47 for instructions on connecting audio cables.

4. If you don’t need to make any other connections, see page 15 for instructions on turning on the projector and adjusting the image. Once the projector is turned on, select the image source: press the Search button on the remote control or the Source Search button on the projector’s control panel.

note
Make sure the Input Signal setting in the Signal menu is set to Auto or Component Video (see page 55).
Playing Sound Through the Projector

You can play sound through the projector’s speaker system.

To play sound through the projector, follow these steps:

1. Locate the appropriate cable and connect it to the **Audio** jack on the projector.
   - For laptop and most desktop computers, use a stereo mini-jack cable.

   - For video equipment, use an RCA-style audio cable and the audio adapter included with the projector.

2. Connect the other end of the cable to the audio output connector(s) on your computer or video equipment.
You can use the projector’s on-screen menus to adjust the image, sound, and other features. This chapter covers the following information:

■ Using the menu system
■ Adjusting the image
■ Adjusting signal settings
■ Customizing projector features
■ Using the projector security features
■ Customizing power and operation
■ Multi-screen color adjustment
Using the Menu System

You can use the remote control or the projector’s control panel to access the menus and change settings. Follow these steps:

1. To display the menu screen, press the Menu button on the remote control or on the projector.

You see a menu screen similar to the one below:

You see a menu screen similar to the one below:

The menus are listed on the left and the options available for the highlighted menu are shown on the right.

2. Use the ☐☐ pointer button on the remote control (or the navigational buttons on the projector) to scroll through the menu list. When you’ve highlighted the desired menu, press the Enter button to select it.

3. Once you’ve selected the menu, use the ☐☐ pointer button to scroll through the list of options. (Some of the options may be grayed out or unavailable, depending on the selected source.)

note
The Network option does not appear in the 1720/1730W menu.
4. After highlighting the option you want to adjust, use the pointer button to change the setting. In some cases, you may have to press the Enter button to view a sub-screen for changing the setting.

- Press the left or right side of the pointer button to adjust a slider bar.
- To select from two or more settings, use the pointer button to highlight the desired setting and press Enter.

5. After changing the settings, press the Esc button to save your changes and return to the previous menu (or press it repeatedly to exit the menu system).

You can also press the Menu button to exit.

**Restoring the Default Settings**

You can use the menu system’s Reset options to restore the factory-default settings for all the settings listed in a specific menu, or all the settings in all menus.

To restore the settings in a specific menu, enter the menu whose settings you want to change, select **Reset**, and confirm as needed. (The example below shows how to reset the Image menu.)

To restore all the projector settings to their factory-default values, select the **Reset** menu, highlight **Reset All**, and press Enter.

*note*  
When you select Reset All in the Reset menu, it does not reset the Computer Input, Video Signal, User’s Logo, Language, or Lamp settings.
Adjusting the Image

You can use the Image menu to adjust the brightness, sharpness, color, tint, and contrast.

1. Press the Menu button on the projector or remote control and select the Image menu. You see the Image menu screen.

![Image menu screen]

2. Use the  pointer button to highlight the desired option, then adjust it as needed:

- **Color Mode**
  Lets you quickly adjust the color and brightness for various uses. You can save a different setting for each source. See page 33 for details on each setting.

  You can also change the color mode by pressing the Color Mode button on the remote control. To use the Customized color mode, see “Six-Axis Color Adjustment” on page 53.

- **Brightness**
  Lightens or darkens the overall image.

- **Contrast**
  Adjusts the difference between light and dark areas.

- **Color Saturation (video only)**
  Adjusts the color depth of the image.

- **Tint (video only)**
  Adjusts the balance of green to magenta in the image (available only for component video or NTSC signals).

**note**
The Brightness setting changes the opacity of the projector's LCD panels. You can also change the lamp's brightness (see page 56).
- **Sharpness**
  Adjusts the sharpness of the image.

- **ABS Color Temp.**
  Sets a color temperature between 5000 and 10000 °K. (Not available if sRGB is selected as the Color Mode setting.)

- **Color Adjustment**
  Adjusts the color values. For **Customized** color mode, select RGBCMY to adjust individual red, green, blue, cyan, magenta, and yellow hue and saturation values. For other color modes, RGB may be selected to adjust red, green, and blue hue and saturation values. (Not available if sRGB is selected as the Color Mode setting.)

- **Auto Iris**
  Automatically adjusts the brightness according to the nature of the image. Improves the depth and detail of dark scenes. (Only available when **Game**, **Theatre**, or **Customized** is selected as the Color Mode setting.)

**Six-Axis Color Adjustment**

For special projection material, such as high-quality photographs or artwork, you can adjust the hue and saturation for six different color axes.

1. Follow the instructions on page 52 to open the Image menu and select **Color Mode**.
2. Press the **Enter** button to select **Customized**, then press **Esc** to return to the Image menu.
3. Select **Color Adjustment** and press **Enter**. You see hue and saturation controls on the screen for six colors: RGBCMY (red, green, blue, cyan, magenta, and yellow).
4. Select the color axis you want to adjust and press **Enter**. You see color controls for hue and saturation.

   Hue changes the balance of color, and saturation changes the strength of the color.
5. Use the pointer button to adjust the hue and saturation. You see the adjustments reflected on the screen. When you are satisfied with the color, press Esc.

6. Repeat steps 4 and 5 for each color axis you want to adjust. You may need to readjust the color as the lamp in your projector changes over time.

### Adjusting Signal Settings

Although the projector normally detects and optimizes the input signal automatically, you can use the Signal menu to make manual adjustments. In addition to changing the position of the projected image, you can correct tracking and sync for computer images, or change the aspect ratio to widescreen format for video images.

1. Press the Menu button and select the Signal menu.

   You see a screen similar to one of those below. (The settings will be different depending on the source you are projecting from.)

2. Use the pointer button to highlight the desired option, then adjust it as needed:

   - **Auto Setup**
     Leave this setting on to automatically optimize the image when Computer is selected as the source. Turn it off if you want to save adjustments you have made to the video settings.

   - **Resolution**
     When set to Auto, the resolution (size) of a computer image is automatically detected so it can be scaled to fit in the
projection area. If the image doesn’t display properly after you adjust the aspect ratio setting (see page 32), select **Wide** to project from a computer with a wide-panel display, or **Normal** for a computer with a 4:3 or 5:4 display.

- **Tracking**
  Adjust this value to eliminate vertical stripes in the image.

- **Sync**
  Adjust this value if the image appears blurry or flickers.

- **Position**
  If the image is slightly cut off on one or more sides, it may not be centered exactly. Select this setting and use the \( \_ \_ \_ \_ \) pointer button to center it.

- **Progressive**
  Select **On** for moving images or **Off** for still images. If you notice video delays during high-speed gaming, turn this setting off.

- **Input Signal**
  If the colors don’t look right on the **Auto** setting, select the setting for the type of equipment you’ve connected to the **Computer (Component Video)** port:

  - **RGB**: For a computer connection.
  - **Component Video**: For a video player that outputs a component video signal.

- **Video Signal**
  Leave this setting at **Auto** unless you are using a 60-Hz PAL system (then select **PAL60**).

- **Aspect**
  Choose an aspect ratio setting that allows the image to fit best in the display area. See page 32 for details.

---

**tip**

Before adjusting tracking or sync, fill the screen with an image containing fine detail, such as black text on a white background.
Customizing Projector Features

You can use the Settings menu to lock the buttons on the projector, adjust audio volume, and customize several other features.

- **Keystone**
  Squares up the shape of the image after the projector has been tilted upward. If you notice lines or edges looking jagged after adjusting the shape, decrease the Sharpness setting (see page 52).

- **Auto Keystone**
  Automatically compensates for keystone distortion when the projector is tilted upward. This feature is available only when the projector is set for front projection (it is enabled by default).

- **Control Panel Lock**
  Lets you disable the buttons on the projector. See page 62 for more information.

- **Pointer Shape**
  Lets you choose from three alternative pointer shapes. See page 36 for more information.

- **Brightness Control**
  Lets you select from two levels of brightness. The Low setting reduces power consumption and noise, and extends the lamp’s operating life.

- **Volume**
  Raises or lowers the volume of the projector’s speaker.

*note*
You can also adjust the volume using the remote control.
■ Remote Receiver
Deactivates the projector’s front and/or back sensors that detect signals from the remote control. Use this setting to prevent use of the remote control or to stop interference from bright fluorescent lights. Restart the projector for this setting to take effect.

■ User Button
Lets you create a shortcut to one of the following menu items: Brightness Control, Info, Progressive, Closed Caption, Test Pattern, Multi-screen, or Resolution. When you press the User button on the remote control, the assigned menu item is displayed.

■ Test Pattern
Displays a test pattern for use when adjusting the zoom and focus, and when performing keystone correction.

Using the Projector Security Features
To prevent unauthorized use of the projector, you can do the following:

■ Assign a password; this can be disabled for a set period if you want to loan the projector to someone.

■ Create an identifying user logo that is displayed at startup and/or when the A/V Mute button is pressed. See page 60.

■ Disable the projector’s buttons; this is useful, for example, if you’re projecting in a classroom and you want to ensure that no one touches the projector’s buttons while you’re using the remote control. See page 62.

If you create a user’s logo for the projector, you can set up the logo so it is displayed as the startup screen and/or A/V Mute screen. Unauthorized users cannot turn it off or change it. This feature is intended to discourage theft and provides a way to identify the projector should it be stolen.
Enabling Password Protection

To prevent unauthorized use, you can assign the projector a password. If you do, a screen will appear requesting the password whenever the projector is plugged in and turned on. If an incorrect password is entered three times in succession, the projector’s operation is locked and the power cord must be disconnected and reinserted to redisplay the password screen. If an incorrect password is entered thirty times in succession, the user must contact Epson to unlock the projector.

The default setting for the Password Protect function is Off. Follow these steps to turn password protection on:

1. Press the Freeze button on the remote control for about five seconds.

   You see this screen:

   ![Password Protect screen]

2. Use the pointer button to set Power On Protect to On. Then press Enter.

3. Press Esc.

4. Select Password and press Enter.

5. When you see a message asking if you want to change the password, select Yes and press Enter.

6. Hold down the Num button on the remote control and use the numeric keypad to enter a four digit password. (The default setting is 0000.)

7. When you see a confirmation message, reenter the password. Then press the Menu button to exit the screen.

note
It’s a good idea to write down your password.
If you leave the projector plugged in, the Password Protect Release screen will not appear. You only need a password if you unplug and reconnect the power cable.

cautions
If you lose the remote control, you will not be able to enter the password. Keep the remote control in a safe place at all times.
8. To enable your screen logo, select User’s Logo Protect and press Enter. Select On and press Enter.

When this feature is on, the logo appears whenever you turn on the projector (if the Startup Screen is enabled in the Extended menu; see page 60). It also appears when you press the A/V Mute button (if you selected the Logo for the A/V Mute setting under Display in the Extended menu). None of the User’s Logo features in the Extended menu can be changed when the User’s Logo Protect function is enabled.

**Starting the Projector with a Password**

When the password function is enabled, you see this screen when you plug in and turn on the projector:

![Password Screen]

Hold down the Num button on the remote control and use the numeric keypad to enter the four digit password.

The password screen closes, the numeric keypad is automatically deactivated, and projection begins.

If the password is not correct, you see a message prompting you to re-enter the password. If you enter an incorrect password three times in succession, you see the message The projector’s operation will be locked. Request code xxxxx and the projector switches to standby mode for approximately 5 minutes. Write down the request code. Then disconnect the projector’s power cord from the electrical outlet, reconnect it, and turn the projector back on.

When you see the Password Protect Release screen again, you can try to enter the correct password.
If you enter an incorrect password 30 times in succession, the projector remains locked and you must contact Epson to unlock it.

If you have forgotten the password, contact Epson with the request code number that appears in the Password Protect Release screen for assistance. See “Where To Get Help” on page 87.

---

**note**

Once you capture an image, it automatically replaces the Epson startup screen. Although you can change the startup screen, you cannot restore the original one.

---

**Creating Your Own Startup Screen**

You can transfer any image from your computer or video source to the projector and then use it as your startup screen. You can also use it as the screen displayed when the projector is not receiving a signal or when you press the **A/V Mute** button. The image can be a company logo, slogan, photograph, or any other image you want to use.

**Capturing the Image**

Start by displaying the image you want to use from either a computer or video source, such as a DVD player. Then follow these steps to capture the image and transfer it to the projector:

1. Press the **Menu** button on the remote control, highlight the **Extended** menu, and press **Enter**.

2. Highlight **User’s Logo** and press **Enter**.

3. When you see a message asking **Choose this image as the user’s logo?**, select **Yes** and press **Enter**. A selection box displays over the image.
4. Use the button to select the area of the image you want to use. Then press Enter.

5. When you see the message Select this Image?, highlight Yes and press Enter.

6. Use the arrow buttons to select a zoom factor (display size) and press Enter.

7. When the message Save this image as the user’s logo? appears, select Yes and press Enter. Saving the logo may take a few moments. Do not use your projector, remote control, or video source while the logo is being saved.

8. When you see the message Completed, press Esc to return to the menu screen.
Choosing When to Display the Image

After your image is saved, it is automatically set as the startup screen. You can also set it to display as the screen you see when there’s no signal or when you press the A/V Mute button (see page 30).

1. Press the Menu button, highlight the Extended menu, and press Enter.
2. Select Display and press Enter.
3. Highlight Display Background (for when there is no signal) or A/V Mute, and press Enter.
4. Select Logo and press Enter.
5. When you’re finished, press Esc to exit.

Disabling the Projector’s Buttons

You can lock all the projector’s control panel buttons, or all buttons except the Power button. The projector can still be operated using the remote control.

1. Press the Menu button, highlight the Settings menu, and press Enter.
2. Select Control Panel Lock and press the Enter button.
3. Select Full Lock (to lock all projector buttons) or Partial Lock (to lock all buttons except the Power button) and press Enter.
4. Select Yes and press Enter to confirm the setting.
5. Press the Menu button to exit.
Customizing Power and Operation

You can use the Extended menu to customize the way the projector displays images, enable quick startup, turn sleep mode on or off, and customize other projector operations.

- **Display**
  Use this setting to turn off the display of messages, change the background color, enable logo display, or turn off the startup screen display.

- **Closed Caption**
  Lets you display closed captioning for content that provides it.

- **User’s Logo**
  Create a custom startup screen, as described on page 60.

- **Projection**
  Select **Front** (to project from the front of a screen and right side up), **Front/Ceiling** (when the projector is mounted upside-down from the ceiling), **Rear** (to project from behind onto a transparent screen), or **Rear/Ceiling** (to project from behind onto a transparent screen when the projector is mounted upside-down from the ceiling).

  When you select one of the Ceiling projection methods, the projector requires a short cool-down period after you turn it off. Wait until you hear the projector beep before unplugging it.
Operation
Use this menu to enable the following functions:

Direct Power On to have the projector start when the power cable is connected (without pressing the \textit{Power} button).

Sleep Mode to have the projector turn off automatically if it is idle (and no signal is received) for the amount of time you select as the \textit{Sleep Mode Timer} (1 to 30 minutes).

Lens Cover Timer to have the projector turn off automatically after 30 minutes when the A/V Mute slide is closed.

High Altitude Mode to increase cooling when you are using the projector above 4900 ft (1500 m).

Link 21L
Enables the projector to work with Link 21L software (not supported in all regions).

Projector ID
Lets you selectively operate two or more projectors in the same room using one remote control. See page 37 for more information.

Multi-screen
Lets you match the color and brightness levels of two or more projectors used in the same room. See below for more information.

Language
Select from nine languages to be used for the projector menus.

\textbf{note}
\textit{If Direct Power On is enabled, the power cable is connected, and a power outage occurs, the projector will start when the power is restored.}

\textit{Do not use the projector at altitudes above 7500 ft (2,286 m).}
Multi-screen Color Adjustment

If you are using multiple projectors in the same room (for example, with a distribution amplifier), you can match the color and brightness between them.

To match the display colors as closely as possible, first make sure that all the projectors are set to the same Color Mode (see page 52) and Brightness Control setting (see page 56). Then follow these steps:

1. Assign a different ID to each projector so that you can use the remote control to adjust each projector individually. See page 37 for instructions.
2. Select Multi-screen in the projector’s Extended menu.
3. Start by selecting the same Adjustment Level for two projectors. Each adjustment level, 1 through 5, displays a screen that lets you adjust the color and brightness at a different level of projector output (luminance).
4. Adjust the Brightness Correct and Color Correct settings for one projector so that its brightness and color tone match that of the other projector.
5. Select the next Adjustment Level for both projectors, and adjust the brightness and color in the same way so the projectors match. Repeat until all five levels have been adjusted.
6. If you are using additional projectors, repeat this process to match projector 3 to projector 2, projector 4 to projector 3, and so on.

Tip
Press the Enter button to view the actual image. Press Enter again to switch back to the Adjustment Level screen.

Note
In some cases, the brightness and color tone may not match completely even after correction.
Fine-Tuning the Projector
Maintaining the Projector

Your projector needs little maintenance. All you have to do is keep the lens clean. You may also need to clean the air filter and vent. A clogged air filter or vent can block ventilation needed to cool the projector.

The only parts you should replace are the lamp and air filter. If any other part needs replacing, contact your dealer or a qualified servicer.

This chapter covers the following:

- Cleaning the lens
- Cleaning the projector case
- Cleaning the air filter and vent
- Replacing the lamp and air filter
- Transporting the projector

**warning**

Before you clean any part of the projector, turn it off and unplug the power cord. Never open any cover on the projector, except the lamp cover. Dangerous electrical voltages in the projector can injure you severely. Do not try to service this product yourself, except as specifically explained in this User’s Guide. Refer all other servicing to qualified service personnel.
**Cleaning the Lens**

Clean the lens whenever you notice dirt or dust on the surface.

To remove dirt or smears on the lens, use lens-cleaning tissue. If necessary, moisten a soft cloth with lens cleaner and gently wipe the lens.

**Cleaning the Projector Case**

Before you clean the case, turn off the projector and unplug the power cord.

- To remove dirt or dust, wipe the case with a soft, dry, lint-free cloth.

- To remove stubborn dirt or stains, moisten a soft cloth with water and a neutral detergent. Then wipe the case.
Cleaning the Air Filter and Vent

Your projector includes an air filter to ensure the best performance. If dust collects on the air filter (on the side of the projector) or vent (on the front of the projector), clean them as described below. Dust clogs prevent proper ventilation and can cause overheating and damage the projector.

Follow these steps:

1. Turn off the projector. Wait for the Power light to stop flashing, then unplug the power cord.

2. To clean the intake vent and filter, use a small vacuum cleaner designed for computers and other office equipment. If you don’t have one, gently clean the vent with a soft brush (such as an artist’s paintbrush).

You can remove the air filter to clean both sides.

3. If the dirt is difficult to remove or the filter is broken, replace the filter as described on page 72. Contact your dealer or call Epson at 800-GO-EPSON (800-463-7766) to obtain a new filter.

---

**note**

To order replacement air filters, request part number V13H134A19. See page 12 for ordering information.
Replacing the Lamp and Air Filter

The life span of the projection lamp is about 3000 hours if Brightness Control in the Setting menu is set to High (default), and 4000 hours if Brightness Control is set to Low.

It is time to replace the lamp when:

- The projected image gets darker or starts to deteriorate.
- The message Replace the lamp appears on the screen when the lamp comes on and the lamp warning light \( \text{Orange} \) flashes orange. To maintain projector brightness and image quality, replace the lamp as soon as possible.
- The lamp warning light \( \text{Red} \) flashes red (the lamp is burnt out).

Contact your dealer or call Epson at 800-GO-EPSON (800-463-7766). Request part number V13H010L48.

Follow these steps to replace the lamp and air filter:

1. Turn off the projector.
2. When the Power light stops flashing, unplug the power cord.
3. Let the projector cool for at least an hour (if it has been on). The lamp is extremely hot immediately after use.
4. Remove the lamp cover screw. Then slide the lamp cover to the side and lift it off of the projector.

5. Loosen the two screws holding the lamp in place (you can’t remove them).
6. Hold the lamp as shown and pull it straight out.

7. Gently insert the new lamp. (If it doesn’t fit easily, make sure it is facing the right way.)

8. Push down the side marked PUSH until it snaps in.

9. Once the lamp is fully inserted, tighten its screws.

10. Replace the lamp cover, then tighten its screw.

11. Slide out the air filter on the bottom of the projector and remove it.

12. Slide in the new air filter until it clicks in place.

13. Reset the lamp timer as described in the next section.
**Resetting the Lamp Timer**

After you replace the lamp, you need to reset the lamp timer using the projector’s menus.

1. Press the Menu button on the remote control or on the projector’s control panel. You see the main menu.

2. Use the buttons on the remote control (or the arrow buttons on the projector) to highlight Reset, then press Enter.

   You see this screen:

   ![Menu Screen]

   - Select Reset Lamp Hours and press Enter.
   - When you see the prompt, select Yes and press Enter.
   - When you’re finished, press Esc or Menu to exit the Menu system.
Transporting the Projector

The projector contains many glass and precision parts. Follow these guidelines to prevent damage:

■ Close the A/V Mute slide (lens cover) to protect the lens.

■ When shipping the projector for repairs, use the original packaging material if possible. If you do not have the original packaging, use equivalent materials, placing plenty of cushioning around the projector.

■ When transporting the projector a long distance, first place it in a hard-shell shipping case, then pack it in a firm box with cushioning around the case. (An optional case is available from Epson; see page 12.)

*note*  
Epson shall not be liable for any damages incurred during transportation.
This chapter helps you solve problems with your projector, and tells you how to contact technical support for problems you can’t solve yourself. The following information is included:

- Using the projector’s on-screen help system
- What to do when the projector’s status lights flash
- Solving projector operation problems
- Solving problems with the image or sound
- Solving problems with the remote control
- Contacting technical support
**Using On-Screen Help**

If the image doesn’t look right or your audio isn’t working, you can get help by pressing the ? Help button on top of the projector or on the remote control.

1. Press the ? Help button on the remote control or on the projector.

You see the Help Menu.

2. Use the pointer button on the remote control or the navigational buttons on the projector to highlight menu items.

3. Press the Enter button on the remote control or on the projector to select the menu item.

4. To exit the help system, press the ? Help button.

If none of the suggestions solve your problem, see additional solutions to problems in the following sections.

**Checking Projector Status**

If your projector isn’t working correctly, first turn it off, wait for it to cool (the Power light stops flashing orange), and unplug it. Then plug the power cord back in and turn on the projector. If this doesn’t solve the problem, check the lights on top of the projector.
What To Do When the Lights Flash

The lights on top of the projector indicate the projector’s status.

Refer to the following table for a complete description of the projector’s status lights:

**Status lights**

<table>
<thead>
<tr>
<th>Light</th>
<th>Status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Power light" /></td>
<td>Orange</td>
<td>The projector is in sleep or standby mode. You can unplug it or press the <img src="image" alt="Power button" /> to turn it on.</td>
</tr>
<tr>
<td><img src="image" alt="Power light" /></td>
<td>Flashing green</td>
<td>The projector is warming up. Wait for the image to appear.</td>
</tr>
<tr>
<td><img src="image" alt="Power light" /></td>
<td>Green</td>
<td>The projector is operating normally.</td>
</tr>
<tr>
<td><img src="image" alt="Power light" /></td>
<td>Flashing orange</td>
<td>The projector is cooling down. You can’t turn it back on (and you should not unplug it) until the light stops flashing and remains orange.</td>
</tr>
<tr>
<td><img src="image" alt="Power light" /></td>
<td>Red</td>
<td>There is a problem with the projector. Check the other two lights and the information on page 77 to diagnose the problem.</td>
</tr>
<tr>
<td><img src="image" alt="Temperature light" /></td>
<td>Flashing red</td>
<td>There is a problem with the fan or temperature sensor. The air filter or vent may be clogged. Clean them or replace the air filter as described on page 69. If this does not resolve the problem, stop using the projector, disconnect the power cable, and contact Epson as described on page 87.</td>
</tr>
</tbody>
</table>
## Status lights (continued)

<table>
<thead>
<tr>
<th>Light</th>
<th>Status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Flash]</td>
<td><strong>Flashing orange</strong></td>
<td>Rapid cooling is in progress. Although this is not an abnormal condition, projection will stop automatically if the temperature rises higher. Make sure there is plenty of space around the projector for ventilation, and that the air filter and vents are clear. If you're using the projector above 4900 feet (1500 m), turn on <strong>High Altitude Mode</strong>; see page 64.</td>
</tr>
</tbody>
</table>
| ![Flash] | **Red**         | The projector is overheating, which turns the lamp off automatically. Wait until the cooling fan stops, then unplug the power cord. Plug the power cord back in and press the **Power** button. Make sure the room temperature is not above 95 °F (35 °C), and there is plenty of space around the projector for ventilation. If you’re using the projector above 4900 feet (1500 m), turn on **High Altitude Mode**; see page 64.  

The air filter or vent may be clogged. Clean them or replace the air filter as described on page 69.  

If the projector continues to overheat after you clean the air filter, the problem may be caused by damage to the cooling fan or temperature sensor. Contact Epson for help as described on page 87.  

**Warning:** Except as specifically explained in this *User’s Guide*, do not attempt to service this product yourself. |
| ![Flash] | **Flashing orange** | It’s time to replace the lamp. See page 70 for instructions. If you continue to use the lamp after the replacement warning, there is an increased possibility that the lamp may break. |
| ![Flash] | **Flashing red** | The lamp may be burnt out. First make sure the lamp cover is securely installed. If that’s not the problem, let the lamp cool, remove the lamp, and replace it as described on page 70.  

The air filter or vent may be clogged. Clean them or replace the air filter as described on page 69.  

If this does not resolve the problem, contact Epson as described on page 87. |
| ![Flash] | **Flashing red** | Power is cut off because of an internal problem. Unplug the power cord and contact Epson for help, as described on page 87. |
| ![Flash] | **Flashing red** | The auto iris is malfunctioning. Unplug the power cord and contact Epson for help, as described on page 87. |
**Viewing Lamp Usage and Other Information**

Use the Info menu to view information about the display settings of your computer and the number of hours the lamp has been used.

Press the Menu button and highlight the Info menu.

You see the lamp usage hours and various input signal settings on the right.

The life span of the lamp is about 3000 hours if the Brightness Control setting in the Setting menu is set to High (default), and 4000 hours if the Brightness Control setting is set to Low. Make sure you have a spare lamp handy if the usage hours on this menu are close to the life span of your lamp.

---

**Solving Projector Operation Problems**

**The power doesn’t turn on.**

- If the projector doesn’t turn on when you press the Power button, make sure the power cable is connected to the projector and plugged into a working electrical outlet.

- The power cable may be defective. Disconnect the cable from the outlet and contact Epson as described on page 87.

- Check to see if the A/V Mute slide is closed.

- Check the status lights (see page 77).

**The buttons on the projector don’t work.**

If the control panels buttons have been locked, try using the remote control instead. See page 62 for information about locking the control panel.
Solving Problems with the Image or Sound

No image appears on the screen.

- Check that the Power light is green, not flashing.
- The projector may be in standby or sleep mode. If the Power light is orange, press the Power button to turn the projector on.
- If the power was switched off and then on again, the projector may be cooling down. Wait until the Power light stops flashing and remains orange; then press the Power button again.
- Press the A/V Mute button on the remote control to make sure the picture has not been turned off temporarily.
- Open the A/V Mute slide, if it is closed.
- The attached computer may be in sleep mode or displaying a black screen saver. Try pressing a key on the computer.
- If you are projecting from a DVD player or other video source, make sure you turn it on and press its Play button.

You’ve connected a computer and see a blue screen with the message No Signal displayed.

- Make sure the cables are connected correctly, as described on page 40.
- If you’ve connected a computer and one or more video sources, you may need to press the Source Search button on the projector or one of the source buttons on the remote control to select the correct source. Allow a few seconds for the projector to sync up after pressing the button.
If you’re using a PC notebook:

- Hold down the Fn key on the keyboard and press the function key that lets you display on an external monitor. It may have an icon such as CRT/LCD, or it may be labelled CRT/LCD. Allow a few seconds for the projector to sync up after pressing it. Check your notebook’s manual or online help for details.

  On most systems, the CRT/LCD key lets you toggle between the LCD screen and the projector, or display on both at the same time.

- Depending on your computer’s video card, you might need to use the Display utility in the Control Panel to make sure that both the LCD screen and external monitor port are enabled. See your computer’s documentation or online help for details.

If you’re using Mac OS X:

1. Open System Preferences.
2. Click Display or Displays.
3. Click Detect Displays.
4. Make sure the VGA Display or Color LCD dialog box is selected.
5. Click the Arrangement or Arrange tab.
6. Make sure the Mirror Displays checkbox is selected.

The message Not Supported is displayed.

- Make sure the correct Input Signal is selected in the Signal menu (see page 55).

- Make sure your computer’s resolution doesn’t exceed UXGA (1600 × 1200) and the frequency or refresh rate is supported by the projector (see page 94). If necessary, change your computer’s resolution setting.

Only part of the image is displayed.

- Press the Aspect button on the remote control to select a different setting (see page 32).
- If projecting from a computer, press the Auto button on the remote control. Also make sure the image Position setting is correct in the Signal menu (see page 55).
- Check the projector’s Resolution setting (see page 54). Select Normal or Wide, depending on the size of your computer’s display panel.
- Make sure your computer is not set to display an extended desktop.
- Press the Esc button on the remote control to cancel the E-Zoom function.
- Make sure your computer’s resolution setting is correct. Ideally, it should be 1280 x 800 to match the projector’s native resolution for the PowerLite 1730W, or 1024 x 768 for the PowerLite 1720. If this option isn’t available, select one of the other compatible video formats listed on page 94.
- You also may need to modify existing presentation files if you created them for a different resolution. See your software documentation for specific information.

The image isn’t square, but keystone-shaped.

- If the top or bottom of the image is broader, press the ▲ or ▼ button on the projector until the image is square.
- If the projector is angled toward the screen from the left or right, the image will be broader on one side. Center the projector in front of the middle of the screen, facing the screen squarely.
- Enable the Auto Keystone feature to automatically fix the shape. See page 56.

The image contains static or noise.

- If you’re using a computer cable longer than 6 feet, or an extension cable, the image quality may be reduced. Use a distribution amplifier for longer distances; you can purchase one from Epson (see page 12).
Keep your computer and video cables away from the power cord as much as possible to prevent interference.

The video signal may be split between the computer and the projector. If you notice a decline in the projected image quality when the image is displayed simultaneously on your notebook computer and the projector, turn off the notebook’s LCD display.

Make sure the correct input signal is selected in the Signal menu (see page 55).

If still images are jittery, turn on the Progressive setting in the Signal menu (see page 55).

The image is blurry.

There may be dirt or smears on the lens. Clean the lens as described on page 68.

Adjust the focus using the focus ring (see page 23).

Make sure the lens is not fogged by condensation. You may need to wait before using the projector after moving it from a cold environment to a warm environment.

Make sure the projector is facing the screen squarely.

Adjust the Sharpness setting on the Image menu (see page 53). When you change video settings, you should be able to see the effect on the screen immediately. If you’re projecting from a computer, you may also need to adjust the tracking and sync as described in the next section. If you don’t like the new settings, you can always select Reset to return to the factory default settings.

You see vertical bands or the image still looks blurry after trying the solutions in the previous section.

If you’re projecting from a computer and displaying an image that contains a lot of fine detail, you may notice vertical bands or some of the characters may look heavy or blurred. Press the Auto button on the remote control to reset the projector’s tracking and sync settings.
If further adjustment is needed, you can fine-tune the Tracking and Sync settings manually using the Signal menu, as described on page 55.

1. Fill the screen with an image containing fine detail, such as black text on a white background.

2. Adjust the Tracking to eliminate vertical bands.

3. Adjust the Sync setting to increase the image sharpness.

The image is too light or dark, or colors are incorrect.

- Press the Color Mode button to select a different color mode (see page 33).
- Try adjusting the brightness and color settings in the Image menu (see page 52).
- Try changing the Brightness Control in the Settings menu (see page 56).
- For fine-art presentations, use the six-axis color adjustment as described on page 53 for precise control of the hue and saturation.
- Check your computer display settings to correct the color balance.
- The projector’s lamp may need to be replaced. See page 70 for instructions.
There is no sound, or the sound is not loud enough.

- Press the \( \text{\textbullet} \text{\textbullet} \) button on the projector or remote control to increase the volume.
- Make sure A/V Mute is not enabled. (The A/V Mute button on the remote control may have been pressed.)
- Make sure the A/V Mute slide is open.
- Try adjusting the Volume setting in the Setting menu (see page 56).
- If you’re using a DVD player or VCR or other video source, make sure the volume is not turned all the way down or muted. Also, make sure the cables are connected correctly, as described on page 47.
- Make sure the audio cable is connected securely at both ends. For computer audio, connect the cable to your computer’s \( \text{\textbullet} \text{\textbullet} \) headphone jack or \( \text{\textbullet} \text{\textbullet} \) audio out jack.
- Make sure the volume control on your computer is not turned all the way down or muted. In Windows, you may be able to use the volume control in your Windows system tray (lower right corner of the screen). On a Mac, you may be able to adjust the volume from your menu bar (top right corner of the screen) or via the volume control function keys.

Solving Problems with the Remote Control

The projector doesn’t respond to remote control commands.

- The remote control’s batteries may not be installed correctly or may be low on power. To change the batteries, see page 28.
- Make sure you are within about 20 feet (6 meters) of the projector and within range of the projector’s front or back sensor (approximately 30° to the left or right and 15° above or below).
- Dim the room lights and turn off any fluorescent lights. Make sure the projector is not in direct sunlight. Strong lighting, especially fluorescent lights, may affect the projector’s infrared receivers. Also, turn off any nearby equipment that emits infrared energy, such as a radiant room heater. To avoid interference, you can also turn off the projector’s front or back sensor with the Remote Receiver setting (see page 57), but this may limit where you can use the remote control.

- Make sure the projector’s sensors have not been turned off with the Remote Receiver setting (see page 57).

- If the projector ID has been set, you may need to change the projector or remote control ID. See page 37.

- If any buttons are held for longer than 30 seconds, the remote enters sleep mode. Release any button that is held to wake the remote.
Where To Get Help

Epson provides these technical support services:

**Internet Support**

Visit Epson’s support website at [www.epson.com/support](http://www.epson.com/support) and select your product for solutions to common problems. You can download utilities and documentation, get FAQs and troubleshooting advice, or e-mail Epson with your questions.

Visit [http://www.presentersonline.com](http://www.presentersonline.com) to access tips, templates, and training for developing successful presentations.

**Speak to a Support Representative**

To use the Epson PrivateLine Support service, call (800) 637-7661 and enter the PIN on the included Epson PrivateLine Support card. This is the fastest way of speaking to a live representative, and it’s free. This service is available 6 AM to 6 PM, Pacific Time, Monday through Friday, for the duration of your warranty period.

You may also speak with a projector support specialist by dialing one of these numbers:

- U.S.: (562) 276-4394, 6 AM to 6 PM, Pacific Time, Monday through Friday.
- Canada: (905) 709-3839, 6 AM to 6 PM, Pacific Time, Monday through Friday.

Days and hours of support are subject to change without notice. Toll or long distance charges may apply.

Before you call for support, please have the following information ready:

- Product name (PowerLite 1720/1730W)
- Product serial number (located on the projector)
- Proof of purchase (such as a store receipt) and date of purchase
- Computer or video configuration
- Description of the problem
Purchase Supplies and Accessories

You can purchase screens, carrying cases, or other accessories from an Epson authorized reseller. To find the nearest reseller, call 800-GO-EPSON (800-463-7766). Or you can purchase online at www.epsonstore.com (U.S. sales) or www.epson.ca (Canadian sales).
This appendix provides guidelines on installing the projector in a permanent location, such as a theater or conference room.

The projector can be installed for four different viewing setups: front projection, ceiling projection, rear projection onto a semi-transparent screen, or rear/ceiling projection, as shown:

To project from overhead, you’ll need the optional ceiling mounting hardware; see page 12 for ordering information. You’ll also need to select **Front/Ceiling** or **Rear/Ceiling** as the Projection option in the projector’s Extended menu to flip the image upside-down. To project from the rear, onto a semi-transparent screen, select **Rear** or **Rear/Ceiling** (see page 63).
If you’re mounting the projector on the ceiling and you place it above screen level, you’ll have to tilt the projector down to position the image on the screen. This causes the image to lose its square shape. You can correct the distortion using the *Keystone* function in the projector’s menu system (see page 56).

If you place the projector so that the base of the lens is level with the bottom of the screen, the image should be square and you won’t have to adjust it. If you place the lens lower than the bottom of the screen, you’ll have to tilt the projector upward if you want to fill the whole screen with the image.

Pixelworks™ DNX™ ICs are used in this projector.
**Compatible Video Formats**

The projector supports NTSC, PAL, and SECAM international video standards, as well as the monitor display formats listed below.

To project images output from a computer, the computer’s video card must be set at a refresh rate (vertical frequency) that’s compatible with the projector. Some images are automatically resized using Epson’s SizeWise™ technology to display in the projector’s “native” format (XGA or WXGA). The frequencies of some computers may not allow images to display correctly; see your computer’s documentation for details.

Notices

This appendix includes safety instructions and other important information about your PowerLite projector.

Important Safety Instructions

Follow these safety instructions when setting up and using the projector:

- Do not look into the lens when the projector is on. The bright light can damage your eyes.
- Do not place the projector on an unstable cart, stand, or table.
- Do not operate the projector on its side, or while tilted to one side. Do not tilt the projector more than 30° forward or back.
- If the projector is mounted on a ceiling, it should be installed by qualified technicians using mounting hardware designed for use with this projector.
- If you use a ceiling mount and apply adhesives to the mount to prevent the screws from loosening, or if you use lubricants or oils on the projector, the projector case may crack and the projector may fall from its ceiling mount. This could cause serious injury to anyone under the mount and could damage the projector. When installing or adjusting a ceiling mount, do not use adhesives to prevent the screws from loosening and do not use oils or lubricants.
- Do not stand on the projector or place heavy objects on it.
- Do not use the projector where it may be exposed to rain, water, or excessive humidity.
- Unplug the projector from the wall outlet before cleaning. Use a dry cloth (or, for stubborn dirt or stains, a moist cloth that has been wrung dry) for cleaning. Do not use liquid or aerosol cleaners.
- Never spill liquid of any kind into the projector.
- Do not use the projector where it may be exposed to excessive dust or smoke.
- Never push objects of any kind through the cabinet slots.
■ Do not use or store the projector or remote control in a hot location, such as near a heater, in direct sunlight, or in a closed vehicle.

■ Do not block the slots and openings in the projector case. They provide ventilation and prevent the projector from overheating. Do not operate the projector on a sofa, rug, or other soft surface, or set it on top of loose papers, which could block vents underneath your projector. If you are setting up the projector near a wall, leave at least 7.9 inches (20 cm) of space between the wall and the air exhaust vent.

■ Do not operate the projector in a closed-in cabinet unless proper ventilation is provided.

■ If you are using two or more projectors side-by-side, leave at least 2 feet (60 cm) of space between the projectors to allow for proper ventilation.

■ You may need to clean the air filter and vent. A clogged air filter or vent can block ventilation needed to cool the projector.

■ Do not store the projector outdoors for an extended length of time.

■ Do not use the projector outside the required temperature range of 41 to 95 °F (5 to 35 °C). Doing so may cause an unstable display and could lead to projector damage.

■ Do not store the projector outside the required temperature range of 14 to 140 °F (–10 to 60 °C) or in direct sunlight for long periods of time. Doing so may cause damage to the case.

■ Do not touch the plug during an electrical storm. Otherwise, you may receive an electric shock.

■ Unplug the projector when it will not be used for extended periods.

■ Unplug the projector from the wall outlet and refer servicing to qualified service personnel under the following conditions: If it does not operate normally when you follow the operating instructions, or exhibits a distinct change in performance; If smoke, strange odors, or strange noises come from the projector; If the power cord or plug is damaged or frayed; If liquid or foreign objects get inside the projector, or if it has been exposed to rain or water; If it has been dropped or the housing has been damaged.

■ Except as specifically explained in this User's Guide, do not attempt to service this product yourself. Refer all servicing to qualified personnel. Opening or removing covers may expose you to dangerous voltages and other hazards.

■ Never open any covers on the projector except as specifically explained in this User's Guide. Never attempt to disassemble or modify the projector. Refer all repairs to qualified service personnel.
Use the type of power source indicated on the projector. Use of a different power source may result in fire or electric shock. If you are not sure of the power available, consult your dealer or power company.

If you use the projector in a country other than where you purchased it, use the correct power cord for that country.

Do not overload wall outlets, extension cords, or power strips. Do not insert the plug into a dusty outlet. This can cause fire or electric shock.

Take the following precautions when handling the plug: Do not hold the plug with wet hands. Do not insert the plug into an outlet with dust present. Insert the plug firmly into the outlet. Do not pull the power cord when disconnecting the plug; always be sure to hold the plug when disconnecting it. Failure to comply with these precautions could result in fire or electric shock.

Do not place the projector where the cord can be walked on.

The lamp(s) in this product contain mercury. Please consult your state and local regulations regarding disposal or recycling. Do not put in the trash.

Do not place anything that can become warped or damaged by heat near the exhaust vents. Do not bring your hands or face close to the vents while projection is in progress.

Before you move the projector, make sure its power is turned off, the plug is disconnected from the outlet, and all cables are disconnected.

Never try to remove the lamp immediately after use because it will be extremely hot. Before removing the lamp, turn off the power and wait at least an hour to allow the lamp to cool completely.

Do not place the source of an open flame, such as a lit candle, on or near the projector.

Do not modify the power cord. Do not place heavy objects on top of the power cord or bend, twist, or pull it excessively. Keep the power cord away from hot electrical appliances.

If the lamp breaks, ventilate the room to prevent gases contained in the lamp from being inhaled or coming in contact with the eyes or mouth.

If the projector is mounted overhead and the lamp breaks, be careful to prevent pieces of glass from falling into your eyes when you open the lamp cover.

**WARNING:** The cords included with this product contain chemicals, including lead, known to the State of California to cause birth defects or other reproductive harm. *Wash hands after handling.* *(This notice is provided in accordance with Proposition 65 in Cal. Health & Safety Code §25249.5 and following.)*
FCC Compliance Statement

For United States Users
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio or television reception. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio and television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

■ Reorient or relocate the receiving antenna.
■ Increase the separation between the equipment and receiver.
■ Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
■ Consult the dealer or an experienced radio/TV technician for help.

WARNING
The connection of a non-shielded equipment interface cable to this equipment will invalidate the FCC Certification of this device and may cause interference levels which exceed the limits established by the FCC for this equipment. It is the responsibility of the user to obtain and use a shielded equipment interface cable with this device. If this equipment has more than one interface connector, do not leave cables connected to unused interfaces. Changes or modifications not expressly approved by the manufacturer could void the user’s authority to operate the equipment.

For Canadian Users
This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

Cet appareil numérique de la classe B respecte toutes les exigences du Règlement sur le matériel brouillateur du Canada.
