Features

**Auto setup (Computer connections)**
The projector analyzes the signal of the computer to which it is connected and automatically makes adjustments to ensure optimal projection results. See “Functions for Enhancing Projection” on page 29.

**Color mode**
Image quality can be selected according to the type of scene. See “Selecting a color mode” on page 29.

**Compact and lightweight**
The projector is compact and easy to carry.
- Dimensions: 10.4 (d) × 14.6 (w) × 4.2 (h) inches 26.5 (d) × 37 (w) × 10.6 (h) cm
- Weight: approximately 7 lbs (3.2 kg)

**Clear, vivid, images**
The projector's high resolution and high luminance achieves a legible display. Project sharp, detailed images, even in bright places.

**Ease of use**
Various projector operations can be easily performed using the included remote controls, as follows:
- pausing projection
- zooming in on important areas of an image

**Unique presentation function**
The mouse pointer can be moved around on the computer screen during projection using the included presentation remote control. (wireless mouse)

**Index**
Before Using the Projector

Part Names and Functions

Front/Top

- **speaker**
- **remote control infrared receiver** P. 11
  Receives signals from the remote control.
- **ventilation outlet**
- **focus ring** P. 25
  Adjusts the image focus.
- **control panel** P. 7
- **foot button (left)** P. 26
  Another foot button is located on the right side. Press both buttons when extending and retracting the front feet.
- **handle**
  Pull out this handle to use when carrying the projector.
- **front foot (left)** P. 26
  Another front foot is located on the right side. Extend and retract to adjust the projection angle.
- **lens cover**
  Attach when not using the projector to prevent the lens from becoming dirty or damaged.
Control panel

- **[Power] button** P. 22
  Turns the projector on and off.

- **Power indicator** P. 22, P. 43
  Flashes or lights in different colors to indicate the operating status of the projector.

- **[▲][▼][◄][►] buttons** P. 33
  Press to correct keystone distortion in images.

- **[▲][▼]: keystone correction buttons** P. 27
  Press to correct keystone distortion in images.

- **[Wide][Tele]: zoom buttons** P. 25
  Press to zoom in or out.

- **[Menu] button** P. 32
  Displays or hides the configuration menus.

- **[Source] button** P. 28
  Switches the input source between the Computer/Component Video port, S-Video port and Video port each time the button is pressed.

- **[Esc] button** P. 35
  Stops the current function. Displays the previous screen or menu when viewing configuration menus.

- **[◄][►] button** P. 34
  Accepts a menu item or advances to the next screen or menu when viewing configuration menus.

- **Warning indicator** P. 44
  Flashes or lights in different colors to alert you to problems with the projector.
Rear

- **Computer/Component Video port**  
  P. 14, P. 20  
  Inputs analog video signals from a computer and *Component Video* signals from other video sources.

- **Video port**  
  P. 20  
  Inputs *Composite Video* signals to the projector.  
  Connect using an A/V cable.

- **S-Video port**  
  P. 20  
  Inputs *S-Video* signals to the projector.  
  Connect using an S-Video cable.

- **Audio port**  
  P. 15, P. 21  
  Inputs audio signals to the projector.  
  Connect using an A/V cable, or a stereo RCA cable.  
  When using computer and video equipment alternately, swap the cable or use an audio switch.

- **Control (RS-232C) port**  
  P. 63  
  Connects the projector to a computer using an RS-232C cable.  
  This port is for control use and should not be used by the customer.

- **Monitor Out port**  
  P. 16  
  Outputs the projected analog computer signal to an external monitor.  
  This feature is not available for video signals.

- **remote control infrared receiver**  
  P. 11  
  Receives signals from the remote control.

- **remote control holder**  
  P. 11  
  Store the remote control in here when not in use.

- **power inlet**  
  P. 22  
  Connects the power cable.

- **security lock**  
  P. 62  
  Receives signals from the remote control.
Part Names and Functions

Base

- **ceiling mount holes (3 points)**
  Install the optional ceiling mount here when suspending the projector from the ceiling.

- **rubber foot**

- **lamp cover**  
P. 57  
Open this cover when replacing the lamp inside the projector.

- **handle**
  Pull out this handle to use when carrying the projector.

- **air filter (air intake vent)**  
P. 55, P. 59  
Prevents dust and other foreign particles from being drawn into the projector. When replacing the lamp, replace the air filter also.
Remote Control

- **Remote control infrared transmitter**
  Transmits remote control signals.

- **[E-Zoom] buttons**  
  - : Enlarges part of the image without changing the size of the projection area.  
  - : Reduces the part of the image that has been enlarged using the [+] button.

- **[Source] buttons**
  - [Computer]: Switches to the signal source being input to the Computer/Component Video port.  
  - [S-Video/Video]: Switches between the signal source being input to the S-Video port and the Video port.

- **[Aspect] button**
  Changes the aspect ratio of images from 4:3 to 16:9.

- **[^][^][^][^] buttons**
  Selects menu items and setting values.

- **[^][^][^][^]: volume buttons**
  Adjusts the volume.

- **[Menu] button**
  Displays or hides the configuration menus.

- **[A/V Mute] button**
  Momentarily turns off the audio and video.

- **[Power] button**  
  Turns the projector on and off.

- **[Color Mode] button**
  Selects the color mode. The color mode changes in the order of Dynamic, Presentation, Theatre, Living Room and sRGB each time the button is pressed.

- **[Esc] button**
  Stops the current function. Displays the previous screen or menu when viewing configuration menus.

- **[Auto] button**
  Use this button to automatically adjust computer images to their optimum settings when automatic setup has been set to “OFF.”

- **[Freeze] button**
  Keeps the current image on the screen.
**Before using the Remote Control**
Remove the insulating tape.

**Using the Remote Control**
Operate the remote control by aiming it at the remote control infrared receiver on the projector.

**Operating range**
- Operable distance: Max. approximately 20 feet (6 m) (May be shorter depending on conditions.)
- Operable angle: approximately 30° horizontally, 15° vertically
* The remote control infrared receiver on the back of the projector can also be used under the same conditions.

**Storage**
When not using the remote control, please store it in the remote control holder on the projector.
1. Open the remote control holder.
2. Place the remote control in the remote control holder.
3. Close the remote control holder until it clicks into place.

---

*If direct sunlight or fluorescent lighting hits the remote control infrared receiver, you may not be able to use the remote control.*
Installation

Be sure to read the Important Safety Instructions before installation.

Installation method
Set up the projector so that it is at right angles to a screen.

Projection distance and screen size

Distance from projector to screen

When setting up the projector against a wall, leave a space of at least 7.9 inches (20 cm) between the projector and the wall.
Other installation methods

Rear projection
(Using a translucent screen)

Ceiling projection

Ceiling/Rear projection
(Using a translucent screen)

The optional ceiling mount is required when installing the projector from a ceiling. Please contact your dealer if you wish to use this method, as special equipment is required for installation. See “Optional Accessories” on page 60.

When using rear projection, or projecting from a ceiling, select the appropriate mode in the “Setting” → “Screen” → “Projection” configuration menu. See “Setting menu” on page 39.
Connecting to a Computer

Connecting to a Computer

When connecting, be sure to:

• Turn off the power for both the projector and the computer.
  Damage may result if you try to make a connection when the power is
  switched on.
• Check the connector types.
  Damage may result if you attempt to insert a connector into the
  incorrect port.

Compatible computers

Condition 1: Check that the computer has an image output port, such as an
RGB port, monitor port or CRT port.

Some computers with a built-in monitor and some notebook computers may
not be compatible. Please refer to your computer manual for further details.

Condition 2: The display frequency and resolution of the computer must
correspond to that of the projector. See “Supported Display Resolutions” on
page 64.

Setup

Press and hold the [Fn] key, followed by the appropriate function number key
that lets you display on an external monitor. Refer to your computer’s
documentation for further details.

• It may take a few moments until the computer image is projected.
• In Windows, a dialog box may appear to alert you that new display
  hardware has been found. Follow the on-screen instructions to proceed.
  If you have any problems, check the troubleshooting chapter for
  possible solutions. See “Troubleshooting” on page 43.
• Depending on the PC, the monitor may go blank when using the
  external video output on the computer.

Projecting images from a computer

Different cables are used depending on whether the monitor port of your
computer is a Mini D-Sub 15Pin, 5BNC† or 13w3 port.

When using a Mini D-Sub 15 pin connector

Notebook connection

When using a notebook or a PC with a built-in monitor, select external
video output on the computer.

To monitor port

Computer cable
(accessory)

To Computer / Component Video port
Connecting to a Computer

When using a 5BNC port

To monitor port

VGA-HD15/BNC PC cable (optional)

To Computer / Component Video port

When using a 13w3 port

To monitor port

13w3 cable (commercially available)

To Computer / Component Video port

Playing sound from a computer

You can play sound from a computer through the projector’s built-in speaker.

Volume adjustment

Press [▼] or [▶] on the remote control.

- Do not bind the power cable and computer cables together. Interference or operational problems may result.
- A particular type of cable may be required for some workstations. Please check with the maker of your workstation.

When using computer and video equipment alternately, swap the cable or use an audio switch.

You can also adjust the volume from the configuration menu. ([Menu] button → “Setting” → “Volume”) See “Setting menu” on page 39.
Connecting to a Computer

Connecting to an external monitor

The image being input into the projector can be displayed on a computer monitor.

- Video images cannot be output to an external monitor.
- Setting gauges (for keystone correction, etc.) and configuration menus will not be displayed on an external monitor.

Presentation Remote Control

You can use the presentation remote control as a wireless mouse to control the mouse pointer on the computer screen. The presentation remote contains all the functions necessary for giving a presentation. Functions include: Page Up/Page Down, Left/Right mouse click, A/V mute, freeze, and mouse pointer.

Compatible computers

Windows®: Windows 98/2000/Me/XP
(Only compatible with the full versions of Windows. Upgraded versions cannot be used.)

Macintosh®: Mac OS® 9.1 or later/OS X 10.1 or later

- The presentation remote receiver can only be connected to computers with a standard USB interface.
- Some computer settings may have to be changed in order for the mouse function to be used. Refer to your computer’s documentation for details.
Connecting to a Computer

Installing the driver for Windows

Screen contents will differ according to the version of Windows you are using. This explanation uses screenshots taken from Windows 98.

Driver installation is not required for the Macintosh.

1. Connect the accessory Presentation Remote Receiver to the USB port of the computer.

   ![Presentation Remote Receiver diagram]

   The “Add New Hardware” wizard is displayed.

   Under normal circumstances, maintain the default settings and click “Next” to proceed.

2. Click “Next.”

   ![Add New Hardware Wizard]

   · You may need to enter a different location to search for the OS files that you are using.
   · Click on “Browse” if you want to change the default search location.

3. Keeping the defaults, click “Next.”

   ![Add New Hardware Wizard]

   Click the check box next to “Specify a location.” Type “C:\WINDOWS” and click “Next.”

   ![Add New Hardware Wizard]

   This wizard searches for new drivers for:
   USB Human Interface Device

   A device driver is a software program that makes a hardware device work.
5  Click on “Next” to confirm the message which is displayed.

6  Click on “Finish.”

The installation of the driver is complete.

*The driver installation screen is displayed a second time. (The presentation remote control driver has two parts; the mouse driver and the keyboard driver.) Follow the on-screen instructions to complete the installation.*
Part Names and Functions

Operate the presentation remote control by aiming it at the presentation remote receiver. When using the Freeze or A/V Mute functions, aim the presentation remote control towards the remote control infrared receiver of the projector.

  Press these buttons to scroll back and forth through pages when projecting a presentation.

- **[L Click] button**
  Acts as a mouse left-click.

- **Double click**: Push the [L Click] button twice.

- **Drag and drop**: To drag, press and hold the [L Click] button and move the cursor with the joystick. The item will be dropped when [L Click] is released.

- **[A/V Mute] button**
  Momentarily turns off the audio and video.

- **[R Click] button**
  Acts as a mouse right-click.

- **[Freeze] button**
  Keeps the current computer or video image on the screen.

- **remote control infrared transmitter**
  Transmits remote control signals.

- **joystick**
  To move the mouse pointer, move the joystick in any of the following directions: up, down, left, right, diagonally.

---

*If the mouse button settings have been reversed on the computer, the operation of the remote control buttons will also be reversed.*
Operating range
Operable distance: Maximum approximately 20 feet (6 m) (may be shorter depending on conditions)
Operable angle: Approximately 30° horizontally, 15° vertically

Connecting to Video Equipment

When connecting, be sure to:
• Turn off the power for both the projector and the video equipment. Damage may result if you try to make a connection when the power is switched on.
• Check the connector types. Damage may result if you attempt to insert a connector into the incorrect port.

Projecting video images

For Composite Video (DVD, VHS, Video games)

For S-Video (DVD, VHS, Video games)
Connecting to Video Equipment

For Component Video (DVD, Video games)

You can adjust the volume with the configuration menu. ([Menu] button → “Setting” → “Volume”) See “Setting menu” on page 39.

- After projection starts, change the “Input Signal” setting in the “Image” menu to either “Component Video (YCbCr)” or “Component Video (YPbPr)” to match the signals from the video equipment. P. 36

Playing sound from video equipment

After projection starts, change the “Input Signal” setting in the “Image” menu to “Computer.” P. 36

When using computer and video equipment alternately, swap the cable or use an audio switch.

For RGB Video

Volume adjustment

Press [●] or [▶] on the remote control.

• After projection starts, change the “Input Signal” setting in the “Image” menu to “Computer.” P. 36

• For an RGB connection, a commercially available adapter or converter cable may be required.
Basic Operation

Turning on the Projector

1. Connect the computer/video.
   See “Connecting to a Computer” on page 14, “Connecting to Video Equipment” on page 20.

2. Remove the lens cover.

3. Attach the power cable to the projector.

4. Insert the power plug into a wall socket.
The power indicator lights orange.

5. Turn on the power of the computer/video.
   If connected to a video source, start playback.

* Turn off the power of the projector and the equipment you are connecting to.

When using a notebook or a PC with a built-in monitor, select external video output on the computer.  

P.14
6 **Press the [Power] button.**

The projector beeps and the power supply indicator begins to blink green.

7 **Wait until the power indicator lights green.**

It takes about 35 seconds.
**Turning off the Projector**

1. Turn off the power to the computer/video equipment.
2. Press the [Power] button.

   The projector beeps and a confirmation screen is displayed.

   ![Power OFF?](image)

   **Power OFF?**

   Yes: Press ● button  
   No : Press any other button

   The power indicator begins to blink.

4. Wait until the power indicator lights orange.
   Cool-down takes place. It takes about 20 seconds.

5. Unplug the projector from the outlet.
   
   **Do not remove the plug while the power indicator is blinking, or this may damage the projector.**
   
   Turn the projector off when not in use. Continuous 24-hour-a-day use may reduce its overall life.

6. Unplug the power cable at the projector.
7. Replace the lens cover.
Adjusting the Display

Adjusting the projection size

The size of the projected image is basically determined by the distance from the projector to the screen. See "Projection distance and screen size" on page 12.

1 Press the [Wide] or [Tele] buttons on the control panel to adjust the projection size.
   - [Wide]: increase the size
   - [Tele]: reduces the size

   The image can be enlarged in this way to 1.2 times the normal size.
   If you would like to enlarge the image further, move the projector further away from the screen.

   • The default setting is wide.
   • The E-Zoom function lets you enlarge parts of the image.
   See "E-Zoom" on page 31.

Setting the focus

Turn the focus ring to adjust the image focus.

- If the surface of the lens is dirty, or misted over as a result of condensation, it may not be possible to adjust the focus correctly. If this happens, clean or de-mist the lens. See "Cleaning the lens" on page 54.
- If the projector is positioned outside the normal projecting range of 2.9-36.4 feet (87-1109 cm), it may not be possible to obtain the correct focus. If you have trouble obtaining the correct focus, check the projection distance.
Adjusting the projection angle

1. Set up the projector so that it is at right angles to the screen.

   Seen from the side
   
   Center of lens

   Seen from above

2. Raise the front of the projector while pressing the buttons on both sides.

3. Extend the front feet and release the buttons when the projector is adjusted to the desired height.

   • The height can be adjusted by turning the base of the front feet on either side.

   • Press the front buttons on both sides and slowly lower the projector down to return to its normal position.

If it is not possible to set up the projector so that it is at right angles to the screen, it can be set up at a slight vertical angle instead. (Max 10°)
Keystone

When the projector is not set at right angles to the screen, the display distorts in the shape of a trapezoid. This distortion can be corrected. You can correct only vertical distortion with this function. Horizontal distortion cannot be corrected.

Press the [▲] or [▼] buttons.

Images can be corrected without distortion when the projector is tilted to a maximum of ±15°.

- Screen size changes when keystone correction is performed.
- If the images become uneven in appearance after keystone correction is performed, decrease the sharpness setting. ([Menu] button → “Image” → “Picture Quality” → “Sharpness”) See “Image menu” on page 36.
Selecting the Input Source

When a device is connected, projection commences automatically without having to select the input source, however when connected to two or more devices, you need to switch between the input sources.

**Projector**

The input source changes each time [Source] is pressed.

The items selected using the “Input signal” command in the “Image” menu are displayed. See “Image menu” on page 36.

**Remote control**

The input source switches between Computer and Component video whenever the [Computer] button is pressed, as shown above.

The input source switches between S-Video and Video whenever the [S-Video/Video] button is pressed, as shown above.

If two or more sources are connected, be sure to swap the audio cables between the connected equipment, when necessary.
## Advanced Operation

### Functions for Enhancing Projection

#### Adjusting computer generated images

The computer signal is analyzed and the following settings are adjusted to ensure the optimum image quality.

- **Tracking**
- **Position**
- **Sync.**

When Auto setup is set to off, press the [Auto] button on the remote control to perform auto setup.

You can set Auto setup to off in the “Image” → “Auto Setup” configuration menu. (The default is ON) See “Image menu” on page 36.

Adjust the Tracking and Sync settings manually if Auto setup cannot be performed. ([Menu] button → “Image” → “Picture Quality” → “Tracking,” “Sync.”) See “Image menu” on page 36.

#### Selecting a color mode

There are five present color modes available for use. Make a selection appropriate to the conditions in which you are projecting.

- **Dynamic**
  - Images are modulated and made crisper to emphasize brightness.

- **Presentation**
  - Brightness is emphasized. For presentations in bright rooms.

- **Theatre**
  - Best for watching movies in their natural tones.

- **Living Room**
  - Brightness is emphasized. Ideal for playing video games in bright rooms.

- **sRGB**
  - Conforms to the sRGB color standard. If the connected source has an sRGB mode, set both the projector and the connected source to sRGB.

If you press the [Auto] button during E-Zoom or Freeze operation, or when a configuration menu is being displayed, the display will be halted and auto setup will take place.
The color mode changes each time you press the [Color Mode] button on the remote control.
Dynamic → Presentation → Theatre → Living Room → sRGB

**Default Value**
- Computer input: Presentation
- Other input: Dynamic

---

**Freeze**
Pauses the projected images.
- Press the [Freeze] button on the remote control. The projected image freezes.
- To cancel, press the [Freeze] button again, or press the [Esc] button.

---

**A/V Mute**
Temporarily stops the image and sound.
- Press the [A/V Mute] button on the remote control. The sound and image disappear.
- Projection is resumed when you press the [A/V Mute] button again or press the [Esc] button.

---

- The screen color during A/V Mute can be set to black or blue. The default setting is blue. ([Menu] button → “Setting” → “Display” → “Background Color”) See “Setting menu” on page 39.
- When activated while projecting moving images, the sound and image will continue to be played back by the source, so it will not be possible to return to the point where A/V Mute was activated.

---

- During Freeze, moving images will continue to be played back by the source, so it will not be possible to return to the point where Freeze was activated.
- Pressing the [Freeze] button also clears configuration menus.
Projecting in widescreen (changing aspect ratio)

This function changes the Aspect ratio of images from 4:3 to 16:9 when component video images (YCbCr and YPbPr) or video images (S-Video or composite video) are being projected. Images which have been recorded in digital video or onto DVDs can be viewed in 16:9 wide-screen format.

Press the [Aspect] button on the remote control to change the screen size as follows:

E-Zoom

The image is enlarged or reduced.

1. Press the [E-Zoom] button on the remote control.
   A target scope is displayed on the screen.

2. Press the [▲][▼][◄][►] buttons to move the target scope to the center of the part you wish to enlarge/reduce.

   - [E-Zoom+]: Enlarges part of the image without changing the size of the projection area.
   - [E-Zoom-]: Reduces the part of the image that has been enlarged using the [+] button.
   - You can scroll with the [▲][▼][◄][►] buttons.
   - Press [Esc] to cancel.
### Configuration Menus

Various adjustments and settings can be made within the configuration menus. Depending on your video source, some settings may not be available.

Menu operation

1. Press the [Menu] button

   ![Diagram 1]

   The top configuration menu is displayed.

2. Press the [▲] or [▼] buttons to select the Top Menu item.

   ![Diagram 2]
3 Press the [←] button.

Sub Menu 1 is displayed.

4 Press the [▲] or [▼] buttons to select the Sub Menu 1 items, then press the [←] button.

5 For Sub Menu 2, press the [▲] or [▼] buttons in the same way, then press the [←] button.

6 Settings can be changed in the following ways:
   (a) Press the [◄] or [►] buttons to change the setting values.
   (b) Press the [▲] or [▼] buttons to select the menu item. Then press the [◄] button.

   (Green): Item currently set.
   (Orange): Item currently selected.

Press the [◄] button to confirm the selection.

The ⚖ mark is displayed after items which perform a setting or lead to a sub menu.
(c) Press the [▕] or [▶] buttons to select the value. Then, press the [⇄] button.

(d) Press the [▲][▼][◄][►] buttons to move the image display position.

7 Set other items in the same way.
Press the [Esc] button to return to the previous item or menu, or select “Return.”

8 Press the [Menu] button to finish.
Function list

Image menu

- When no signal is being input, only the settings for “Auto Setup” and “Input Signal” can be adjusted.
- The functions in the “Image” Menu will be different according to the type of signal which is being input.

“Input Signal” only appears on menu screens when component video images are being projected.

| All Reset      | Resets all items in the configuration menus to their default settings.  
|                |   - Press the [●] button and select “Yes” on the confirmation screen which is displayed.  
|                |   - Select “Reset” in an individual menu to reset only the settings for the items in that sub menu.  
|                |   - “Input Signal,” “Language” and “Lamp Hours” settings will not be reset.                                                             |
Troubleshooting

When You Suspect a Problem

First, check the indicators on the projector. There are two indicators on the projector unit which notify you of projector conditions.

<table>
<thead>
<tr>
<th>Condition</th>
<th>Cause/Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Orange</strong></td>
<td><strong>Standby state</strong>&lt;br&gt;The power cable should only be disconnected when the projector is in this state.&lt;br&gt;Press the [Power] button to start projection.</td>
</tr>
<tr>
<td><strong>Orange</strong></td>
<td><strong>Cool-down in progress</strong>&lt;br&gt;• Please wait. The cool-down period lasts about 20 seconds.&lt;br&gt;• You cannot operate the [Power] button during the cool-down period. Press the power button again after cool-down has finished.</td>
</tr>
<tr>
<td><strong>Green</strong></td>
<td><strong>Projection in progress</strong></td>
</tr>
<tr>
<td><strong>Green</strong></td>
<td><strong>Warming-up</strong>&lt;br&gt;Please wait. Warming up takes about 35 seconds (the EPSON logo appears after approximately 6 seconds). When warming up is complete, the indicator changes to steady green.</td>
</tr>
</tbody>
</table>
Warning indicator

<table>
<thead>
<tr>
<th>Condition</th>
<th>Cause/Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Red</td>
<td>High internal temperature (overheating)</td>
</tr>
<tr>
<td></td>
<td>The lamp turns off automatically and projection stops. Wait for about 5 minutes without operating the projector. After about 5 minutes have passed, unplug the power cable and check the following:</td>
</tr>
<tr>
<td></td>
<td>• Make sure the air filter and ventilation outlet are clear and that the projector is not positioned against a wall.</td>
</tr>
<tr>
<td></td>
<td>• If the air filter is dirty, it should be cleaned.</td>
</tr>
<tr>
<td></td>
<td>When the power cable is plugged back in, the projector will return to its previous state. Press the [Power] button on the projector or on the remote control to turn it back on.</td>
</tr>
<tr>
<td>Red</td>
<td>Lamp problem</td>
</tr>
<tr>
<td>(0.5 second interval)</td>
<td>Disconnect the power cable from the electrical outlet. Remove the lamp and check that it is not broken. If the lamp is not broken, re-install it. Reconnect the power cable and press the [Power] button on the projector or the remote control to turn it back on.</td>
</tr>
<tr>
<td></td>
<td>• If the lamp is broken, please contact your dealer or see Where to Get Help to contact EPSON. (You will not be able to use the projector until the lamp is replaced).</td>
</tr>
<tr>
<td></td>
<td>• Check that the lamp and lamp cover are securely installed. If the lamp or lamp cover are not securely installed, the lamp will not switch on.</td>
</tr>
<tr>
<td>Red</td>
<td>Internal problem</td>
</tr>
<tr>
<td>(1 second interval)</td>
<td>Stop using the projector, disconnect the power cable from the electrical outlet and contact your dealer or see Where to Get Help to contact EPSON.</td>
</tr>
<tr>
<td>Orange</td>
<td>High-speed cooling in progress</td>
</tr>
<tr>
<td></td>
<td>(This is not abnormal, but, if the temperature rises too high again, projection will stop automatically.) Set up the projector in a place which is well ventilated and ensure the air filter and ventilation outlet are clear. Clean the air filter.</td>
</tr>
</tbody>
</table>

If problems with projection do occur, but the indicators do not show any abnormal conditions, please refer to the section “When the indicators provide no help” on the next page.

If a condition occurs which is not listed in this table, please consult your dealer or see Where to Get Help to contact EPSON.

If you follow the above steps and are still unable to correct the problem, please cease using the projector, unplug the projector from the electrical outlet and request repairs from your dealer or see Where to Get Help to contact EPSON.
When You Suspect a Problem

### When the indicators provide no help
- No images appear (Nothing is displayed) page 45
- No images appear (Messages are displayed 1) page 46
- No images appear (Messages are displayed 2) page 46
- Image is out of focus (unclear) page 47
- Vertical stripes appear in the image page 48
- Image is distorted / Image contains interference page 48
- Only part of the image is displayed (large/small) page 49
- Image colors are poor, tinted green or tinted red/purple page 50
- Image is dark page 51
- No sound can be heard page 51
- The remote control does not work page 52
- The power does not turn off (after the [Power] button is pressed) page 52

### No images appear (Nothing is displayed)

When You Suspect a Problem

**Image is out of focus (unclear)**

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>• The image is fuzzy</td>
<td>If the configuration menu “Image” → “Auto Setup” setting has been set to “OFF,” press the [Auto] button on the remote control to adjust these settings. If the images have not been correctly adjusted after pressing the [Auto] button and using the auto setup function, adjust the settings manually in their respective menus. ([Menu] button → “Image” → “Picture Quality” → “Tracking,” “Image” → “Picture Quality” → “Sync.,” “Setting” → “Screen” → “Position”) See “Image menu” on page 36, “Setting menu” P.39.</td>
</tr>
<tr>
<td>• Part of the image is out of focus</td>
<td></td>
</tr>
<tr>
<td>• The whole image is out of focus</td>
<td></td>
</tr>
<tr>
<td>• Have the “Sync.,” “Tracking” and “Position” settings been adjusted correctly?</td>
<td>If the configuration menu “Image” → “Auto Setup” setting has been set to “OFF,” press the [Auto] button on the remote control to adjust these settings. If the images have not been correctly adjusted after pressing the [Auto] button and using the auto setup function, adjust the settings manually in their respective menus. ([Menu] button → “Image” → “Picture Quality” → “Tracking,” “Image” → “Picture Quality” → “Sync.,” “Setting” → “Screen” → “Position”) See “Image menu” on page 36, “Setting menu” P.39.</td>
</tr>
</tbody>
</table>
| • Are the image signal format settings correct?                       | • When a computer or Component Video† device is connected, select the appropriate setting for the input source you are using, in the “Image” → “Input Signal” configuration menu.  
• When a Composite Video† or S-Video† device is connected, select the appropriate setting for the video system you are using in the “Setting” → “Video Signal” configuration menu. |
| • Is the projector positioned at right angles to the screen?          | See “Installation method” on page 12.                                                                                                                                                           |
| • Is the projector at the correct distance from the screen?           | The optimum range for projection is 2.9-36.4 feet (87-1109 cm). Set the projector within this range. See “Installation method” on page 12.                                                                 |
| • Are the front feet set so that the image angle is too big for the screen? | If the image angle is too big the image will be out of focus vertically. See “Adjusting the projection angle” on page 26.                                                                 |
| • Is the lens dirty?                                                   | See “Cleaning the lens” on page 54.                                                                                                                                                            |
| • Has condensation formed on the lens?                               | If the projector is suddenly taken from a cold environment to a warm environment, condensation may form on the surface of the lens, and this may cause the images to appear fuzzy. Set the projector up in the room in which it is to be used approximately one hour before use. If condensation forms on the lens, turn off the power and wait for the condensation to disappear. |
| • Has the focus been correctly adjusted?                              | See “Adjusting the Display” on page 25.                                                                                                                                                         |
| • Is the lens cover still in place?                                   | See “Turning on the Projector” on page 22.                                                                                                                                                      |
### Vertical stripes appear in the image

- Has the "Tracking" setting been adjusted?

  Set the tracking value until the vertical stripes disappear. ([Menu] button → "Image" → “Picture Quality” → “Tracking”) See "Image menu" on page 36.

### Image is distorted / Image contains interference

- Have the "Sync," "Tracking" and "Position" settings been adjusted correctly?

  If the configuration menu “Image” → “Auto Setup” setting has been set to “OFF,” press the [Auto] button on the remote control to adjust these settings. If the images have not been correctly adjusted after pressing the [Auto] button and using the automatic setup function, adjust the settings manually in their respective menus. ([Menu] button → “Image” → “Picture Quality” → “Sync.”) See "Image menu" on page 36.

- Are the image signal format settings correct?

  - When a computer or Component Video device is connected, select the appropriate setting for the input source you are using, in the “Image” → “Input Signal” configuration menu.
  - When a Composite Video or S-Video device is connected, select the appropriate setting for the video system you are using in the “Setting” → “Video Signal” configuration menu.

- Has the correct resolution been selected?

  Set the computer so that the signals that are output are compatible with this projector. Refer to your computer’s documentation for further details. See “Supported Display Resolutions” on page 64.

- Is an extension cable being used?

  If using an extension cable, electrical interference may affect the signals. Confirm that you are using a shielded cable.

- Are the cables connected correctly?

  See “Connecting to a Computer” on page 14, “Connecting to Video Equipment” P.20.
**Only part of the image is displayed (large/small)**

<table>
<thead>
<tr>
<th>Instruction</th>
<th>Description</th>

</tr>
</tbody>
</table>
When You Suspect a Problem

Image colors are poor, tinted green or tinted red/purple

- **Are the image signal format settings correct?**
  
  If a component video device is connected and “Computer” is set as the “Image” → “Input Signal” configuration menu setting, the projected images will appear greenish. If a computer is connected and either “Component Video (YPbPr)” or “Component Video (YCbCr)” is set as the “Image” → “Input Signal” configuration menu setting, the projected images will appear red/purplish. Please select the appropriate setting for the equipment you are using. ([Menu] button → “Image” → “Input Signal”) See “Image menu” on page 36.

- **Does the lamp need replacement?**
  
  When the lamp is due for replacement, colors will weaken and the image will become dark. Replace the lamp when this is the case. See “Lamp replacement period” on page 56.

- **Has the image contrast been adjusted correctly? ([Menu] button → “Image” → “Picture Quality” → “Contrast”)**
  
  See “Image menu” on page 36.

- **Has the color been adjusted correctly? ([Menu] button → “Image” → “Picture Quality” → “Color Temperature”)**
  
  See “Image menu” on page 36.

- **Has the saturation and tint been adjusted correctly? ([Menu] button → “Image” → “Picture Quality” → “Saturation,” “Tint”)**
  
  See “Image menu” on page 36.

- **Has the image brightness been adjusted correctly? ([Menu] button → “Image” → “Picture Quality” → “Brightness”)**
  
  See “Image menu” on page 36.

- **Are the cables connected correctly?**
  
  See “Connecting to a Computer” on page 14, “Connecting to Video Equipment” P.20.

- **When connecting to a computer**
  
  Colors may not exactly match those displayed on the computer screen or LCD screen, but this is normal and is not the sign of a problem.

When You Suspect a Problem

The remote control does not work

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Is direct sunlight or strong light from fluorescent lamps shining onto the remote control infrared receiver?</td>
<td>See “Using the Remote Control” on page 11.</td>
</tr>
<tr>
<td>Is the remote control too far from the projector?</td>
<td>The operating distance for the remote control is approximately 20 feet (6 m). See “Operating range” on page 11.</td>
</tr>
<tr>
<td>When in use, is the remote control infrared transmitter facing the remote control infrared receiver on the projector?</td>
<td>The operating angle for the remote control is approximately ±30½° horizontally and approximately ±15½° vertically. See “Operating range” on page 11.</td>
</tr>
<tr>
<td>Has the battery insulating tape been removed?</td>
<td>See “Before using the Remote Control” on page 11.</td>
</tr>
<tr>
<td>Is the battery dead?</td>
<td>See “Changing the battery (Remote Control, Presentation Remote Control)” on page 56.</td>
</tr>
<tr>
<td>Is the battery inserted correctly?</td>
<td></td>

The power does not turn off (after the [Power] button is pressed)

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>The power indicator remains orange.</td>
<td>This projector is designed so that the Power indicator remains lit even after the power has been turned off. The Power indicator will switch off when the power cable is disconnected from the electrical outlet.</td>
</tr>
<tr>
<td>The cooling fan does not stop.</td>
<td>After the [Power] button has been pressed, the cool-down period begins. After this, the Power indicator changes to a steady orange, and you can then disconnect the power cable from the electrical outlet. Cool-down lasts for about 20 seconds.</td>
</tr>
</tbody>
</table>
Where to Get Help

EPSON provides technical assistance through electronic support services 24 hours a day, as listed in the following table.

<table>
<thead>
<tr>
<th>Service</th>
<th>Access</th>
</tr>
</thead>
<tbody>
<tr>
<td>World Wide Web</td>
<td>From the Internet, you can reach EPSON’s product support page at <a href="http://support.epson.com">http://support.epson.com</a>. After selecting your product, you can access troubleshooting information, download product documentation, and receive technical advice through FAQs and e-mail.</td>
</tr>
<tr>
<td>Presenters Online</td>
<td>Access tips, templates, and training for developing successful presentations at <a href="http://www.presentersonline.com">http://www.presentersonline.com</a></td>
</tr>
</tbody>
</table>

**Telephone Support Services**

To use the EPSON PrivateLine Support service, call (800) 637-7661 and enter the PIN on the included EPSON PrivateLine Support card. This is the fastest way of speaking to a live representative, and it’s free. This service is available 6 AM to 6 PM, Pacific Time, Monday through Friday, for the duration of your warranty period.

You may also speak with a projector support specialist by dialing one of these numbers:

- U.S.: (562) 276-4394, 6 AM to 6 PM, Pacific Time, Monday through Friday
- Canada: (905) 709-3839, 6 AM to 6 PM, Pacific Time, Monday through Friday

Toll or long distance charges may apply.

Before you call, please have the following information ready:

- Product name (EPSON PowerLite S1+)
- Product serial number (located on the bottom of the projector)
- Computer or video configuration
- Description of the problem

You can purchase screens, carrying cases, or other accessories from EPSON at (800) 873-7766 or by visiting the EPSON Store at [www.epsonstore.com](http://www.epsonstore.com) (U.S. sales only). In Canada, please call (800) 463-7766 for dealer referral.
Appendix

Projector Care

Be sure to read the Important Safety Instructions before proceeding.

Cleaning

You should clean the projector if it becomes dirty or if the projected image starts to deteriorate.

Cleaning the projector case

Clean the projector case by wiping it gently with a soft cloth.

If the projector is particularly dirty, moisten the cloth with water containing a small amount of (ph) neutral detergent, and then firmly wring the cloth dry before using it to wipe the projector case. After you have done this, wipe the projector again with a soft, dry cloth.

Cleaning the lens

Use a commercially-available air blower, or lens cleaning paper to gently wipe the lens.

As the lens can be easily damaged, do not rub the lens with harsh materials or subject the lens to shocks.

Do not use volatile substances such as wax, alcohol or thinner to clean the projector case. These can cause the case to warp and make the surface coating peel off.
Cleaning the air filter

If the air filter becomes clogged with dust, it can cause overheating and damage the projector. Keeping the projector horizontal, use a vacuum cleaner to clean away the dust from the air filter.

- If the air filter is difficult to clean or if it is broken, it should be replaced. See [Replacing the air filter](#) for instructions. See [Optional Accessories](#) for information on purchasing additional air filters.
- Spare lamps are provided with new air filters. When replacing the lamp, please replace the air filter at the same time.
Replacing consumables

Changing the battery (Remote Control, Presentation Remote Control)
Replacement battery: 1 × CR2025 lithium battery

1 Remove the battery holder.
   While pressing the catch of the battery holder inwards, pull the battery holder out.

2 Remove the old battery and insert the new one.
   Check the position of the (+) mark inside the battery holder to ensure that the battery is inserted the correct way.

3 Replace the battery holder.
   Press the battery holder in until it clicks.

---

Keep batteries away from children to avoid the risk of accidents. If a child swallows the battery, contact your doctor immediately.

Please dispose of used batteries in accordance with local waste disposal regulations.

Lamp replacement period

- It is time to change the lamp when the “Replace Lamp” message appears in the bottom left hand corner of the screen at the commencement of projection and remains for 30 seconds.
- It is also time to change the lamp when the Warning indicator flashes red at 0.5 second intervals.

- The replacement message will appear after about 1900 hours of use. Lamp life will vary depending on the mode selected, environmental conditions, and usage.
- When this message is displayed, please replace the lamp as quickly as possible.
- The lamp may explode if you continue to use it beyond the lamp replacement period.
- Some lamps may stop operating before the replacement message is displayed. It is recommended that you have a replacement lamp ready in case this happens.
- Replacement lamps can be purchased at your nearest dealer.
Replacing the lamp

- Wait until the lamp has cooled down sufficiently before opening the lamp cover. It takes one hour after the projector’s cool-down period has finished for the lamp to be cool enough.
- When the lamp is broken, replace it with a new lamp, or contact your dealer for further advice. If replacing the lamp yourself, be careful to avoid pieces of broken glass.

1. Turn off the projector and wait for the cool-down period to end. (Approximately 20 seconds)
2. Unplug the power cable and remove it, then wait for the lamp to cool down. (Approximately 1 hour)
3. Open the lamp cover.
   Push in the tabs on the lamp cover and push it up to remove it.
4. Loosen the screws holding the lamp in place.
5. Remove the old lamp.
6. Install the new lamp.
   Press the lamp until it clicks into place, then tighten the two screws.
7 Replace the lamp cover.
First insert the tabs, and then press down on the opposite side until it clicks into place.

Resetting the lamp operating time
The projector has a built-in counter which keeps track of the lamp operating time and causes the replacement warning message to be displayed when the cumulative operating time reaches a certain point. Therefore, the counter needs to be reset from the configuration menu, after the lamp has been replaced with a new one.

1 Turn on the power and press the [Menu] button.

Please do not reset the lamp operating time except when the lamp has been changed. Otherwise, the lamp operating time will not be displayed correctly.

2 Select “Lamp Hours Reset” from the “Reset” menu, using the [▲][▼][←] buttons.

- Install the lamp securely. If the lamp cover is removed, the lamp turns off automatically as a safety precaution. The lamp will not turn on if the lamp or the lamp cover is not installed correctly.
- After replacing the lamp, be sure to reset the lamp operating time.
- New air filters are included with replacement lamps. The air filter should also be replaced when the lamp is replaced. See “Lamp replacement period” on page 56.
- Dispose of used lamps properly in accordance with your local regulations.
3 Use the [▲][▼] buttons to select “Yes,” then press the [►] button.

The lamp operating time will be reset.

Replacing the air filter
Replacing the air filter can also be performed when the projector is mounted to a ceiling.

1 Turn off the projector power, wait for the cool-down period to end, then disconnect the power cable.
   Cool-down takes about 20 seconds.

2 Push in the tab on the air filter cover and lift up the air filter cover to remove it.

3 Replace the air filter with a new one.
   Take out the old air filter and install the new one. Please ensure there are no gaps between the air filter and the plastic grill.

4 Replace the air filter cover.
   First insert the tabs, and then press down on the opposite side until it clicks into place.

Dispose of used air filters properly in accordance with your local regulations.
## Optional Accessories

You can purchase screens, carrying cases, or other accessories from EPSON at (800) 873-7766 or by visiting the EPSON Store at www.epsonstore.com (U.S. sales only). In Canada, please call (800) 463-7766 for dealer referral. This list of optional accessories is current as of May 2003. Details of accessories are subject to change without notice.

## Glossary

Complex terms used in this book, or terms not explained in the body of the text, will be briefly explained here. For further explanation, please consult commercially available reference texts.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>5BNC</strong></td>
<td>A type of connector used to input analog video signals.</td>
</tr>
<tr>
<td><strong>Aspect ratio</strong></td>
<td>The ratio between an image's length and its height. Images which have an aspect ratio of 16:9 are called Widescreen. The aspect ratio for standard images is 4:3.</td>
</tr>
<tr>
<td><strong>Color Temperature</strong></td>
<td>The temperature of an object which is emitting light. When the color temperature is high, colors tend to take on a bluish tinge; when the color temperature is low, colors tend to take on a reddish tinge.</td>
</tr>
<tr>
<td><strong>Component Video</strong></td>
<td>A type of video signal which has the video brightness and color signal information separated, in order to provide better image quality. In high-definition TV (HDTV), it refers to images which consist of three independent signals: Y (luminance signal), and Pb and Pr (color difference signals).</td>
</tr>
<tr>
<td><strong>Composite Video</strong></td>
<td>The standard home video signal (NTSC, PAL, SECAM) which has the video brightness and color signal information mixed together. Composite video consists of the carrier signal Y (luminance signal) and the chroma (color) signal, combined within the color bar signal.</td>
</tr>
<tr>
<td><strong>Contrast</strong></td>
<td>The relative brightness of the light and dark areas of an image, which can be increased or decreased in order to make text and graphics stand out, or appear softer.</td>
</tr>
<tr>
<td><strong>Cool-down</strong></td>
<td>The process used to cool down a projector lamp that is hot from use. Cool-down happens automatically when the [Power] button is pressed on the projector or on the remote control to turn the projector off. Do not unplug the projector power cable while it is cooling down. If cool-down is interrupted, heat from the lamp gets trapped inside the projector, potentially shortening the life of the lamp and causing projector failure.</td>
</tr>
<tr>
<td><strong>Dolby digital</strong></td>
<td>An audio format developed by Dolby Laboratories. Normal stereo is a 2-channel format which uses two speakers, whereas Dolby Digital is a 6-channel (5.1-channel) system which adds a center speaker, two rear speakers and a sub-woofer.</td>
</tr>
</tbody>
</table>
| **HDTV**         | An abbreviation for High-Definition Television, it refers to high definition systems which satisfy the following conditions:  
- Vertical resolution of 750p or 1125i or greater (p=Progressive scanning, i=Interlaced scanning)  
- Screen aspect ratio of 16:9  
- Dolby digital audio reception and playback (or output) |
<p>| <strong>Interlaced scanning</strong> | Each screen is divided into fine horizontal lines which are displayed in sequence starting from left to right and then from top to bottom. In this method of image scanning, even numbered lines and odd numbered lines are displayed alternately. |
| <strong>Progressive scanning</strong> | A method of image scanning whereby the image data from a single image is scanned sequentially from top to bottom to create a single image. |</p>
<table>
<thead>
<tr>
<th><strong>Refresh Rate</strong></th>
<th>The number of refresh operations per second. The light-emitting element of a display maintains the same luminosity and color for an extremely short time. For this reason, the image must be scanned many times per second in order to refresh the light-emitting element. The refresh rate is expressed in hertz (Hz).</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Resized display</strong></td>
<td>This function is used to project computer images that have a resolution more than or less than the projector's panel resolution, so that they fill the whole of the projection area.</td>
</tr>
<tr>
<td><strong>SDTV</strong></td>
<td>An abbreviation for Standard Definition Television. It refers to standard television systems which do not satisfy the conditions for High-Definition Television.</td>
</tr>
<tr>
<td><strong>Security lock</strong></td>
<td>A device consisting of a projector case with a hole in it that a commercially-available theft-prevention cable can be passed through in order to secure the device to a table or pillar. This projector is compatible with the MicroSaver® Security System manufactured by Kensington®.</td>
</tr>
</tbody>
</table>
| **Squeeze mode** | The method of compressing 16:9 Widescreen images and recording them on video software as 4:3 images.  
*When projecting with Squeeze mode on, the images will return to their original 16:9 format.* |
| **sRGB** | An international standard for color intervals that was formulated so that colors which are reproduced by video equipment can be handled easily by computer operating systems (OS) and the Internet. |
| **SVGA** | A type of video signal with a resolution of 800 (horizontal) × 600 (vertical) dots which is used by IBM PC/AT-compatible computers. |
| **S-Video** | A type of video signal which has the video brightness and color signal information separated, in order to provide better image quality. It refers to images which consist of two independent signals: Y (luminance signal), and C (color signal). |
| **Sync. (Synchronization)** | The process of matching the phases (the relative position of crests and troughs) of computer and projector signals. If signals are not synchronized, problems such as flickering, blurriness and horizontal interference can occur. |
| **Tracking** | The process of matching the computer and projector frequencies (the number of crests in the signals). If tracking is not carried out correctly, wide vertical stripes will appear in the projected images. |
| **VGA** | A type of video signal with a resolution of 640 (horizontal) × 480 (vertical) dots which is used by IBM PC/AT-compatible computers. |
| **XGA** | A type of video signal with a resolution of 1,024 (horizontal) × 768 (vertical) dots which is used by IBM PC/AT-compatible computers. |
| **YCbCr** | The carrier signal contained in the color bar signal used in modern (NTSC) TV transmissions. The name comes from the Y (luminance) signal and the CbCr (chroma [color]) signals. |
| **YPbPr** | The carrier signal contained in the color bar signal used in high-definition TV (HDTV) transmissions. The name comes from the Y (luminance) signal and the PbPr (color difference) signals. |

Important Safety Instructions

Please read the following important information about your projector.

- Never look into the projector lens when the lamp is switched on as the bright light can damage your eyes. Never let children look into the lens when it is on.
- Never open any covers on the projector except the lamp cover. Dangerous electrical voltages inside the projector can cause severe injury. Except as specifically directed in the User’s Guide supplied, do not attempt to service this product yourself. Refer all servicing to qualified service personnel.
- Keep the plastic bags for the projector, accessories and optional parts out of the reach of children. Children covering their heads with bags may result in death by suffocation. Be particularly careful around small children.
- When you replace the lamp, never touch the new bulb with your bare hands. The invisible residue left by the oil on your hands may be shorten the bulb life. Use a cloth or gloves to handle the new bulb.

Follow these safety instructions when setting up and using the projector:

- Do not place the projector on an unstable cart, stand, or table.
- Do not use the projector near water or sources of heat.
- Use attachments only as recommended.
- Use the type of power source indicated on the projector. If you are not sure of the power available, consult your dealer or local electricity company.
- Place the projector near a wall outlet where the plug can be easily unplugged.
- If the projector has a three-prong plug, insert the projector’s three-pin grounding-type plug into a properly grounded outlet. If you have a two-prong outlet, contact an electrician to replace it.
- Do not handle the plug with wet hands.
- Take the following precautions when handling the plug. Failure to comply with these precautions could result in sparks or fire.
- Do not insert the plug into an outlet with dust present.
- Insert the plug firmly into the outlet.
- Do not overload wall outlets, extension cables or integral convenience receptacles. This can cause fire or electric shock.
- Do not place the projector where the cable can be stepped on. It may result in fraying or damage to the plug.
- Unplug the projector from the wall outlet before cleaning. Use a damp cloth for cleaning. Do not use liquid or aerosol cleaners.
- Do not block the slots and opening in the projector case. They provide ventilation and prevent the projector from overheating. Do not place the projector on a sofa, rug or other soft surface, or in a closed-in cabinet unless proper ventilation is provided.
- Never push objects of any kind through cabinet slots. Never spill liquid of any kind into the projector.
- Unplug the projector when it will not be used for extended periods.
- Do not place the projector and remote control on top of heat producing equipment or in a heated place, such as a car.
- Unplug the projector from the wall outlet and refer servicing to qualified service personnel under the following conditions:
  - When the power cable or plug is damaged or frayed
  - If liquid has been spilled into the projector, or it has been exposed to rain or water
  - If it does not operate normally when you follow the operating instructions, or if it exhibits a distinct change in performance, indicating a need for service
  - If it has been dropped or the housing has been damaged
- The internal projector components consist of many glass parts such as the lens and projection lamp.
The lamp is fragile, and can easily break. If the lamp breaks, handle the projector with extreme care to avoid injury from broken glass, and contact your dealer or see Where to Get Help for repairs.

Particular care should be taken when the projector is installed to a ceiling, as small pieces of glass may fall down when the lamp cover is removed. Be very careful not to allow such pieces of glass to get into the eyes or mouth.

Material or paper may get stuck against the air filter underneath the projector while it is in use. Remove anything from underneath the projector that might get stuck against the air filter in this way.

Never try to remove the lamp immediately after use.

Doing so will result in serious burns. Before removing the lamp, turn off the power supply and wait the time specified in the User's Guide to allow the lamp to cool completely.

A mercury lamp with high internal pressure is used as the projector's light source. Mercury lamps may make a loud noise when they break. Handle the lamp with extreme care while observing the following.

If the following points are not observed, injury or poisoning may result.

Do not damage the lamp or subject it to any impacts.

Do not use the lamp after the lamp replacement period has elapsed. Once the lamp replacement period has elapsed, the possibility of the lamp breaking becomes greater. When the lamp replacement message appears, replace the lamp with a new one as soon as possible.

The gases inside mercury lamps contain mercury vapor. If the lamp breaks, immediately ventilate the room to prevent the gases that are released when the lamp breaks from being inhaled or coming into contact with the eyes or mouth.

Do not bring your face close to the projector while it is in use, in order to prevent the gases that are released when the lamp breaks from being inhaled or coming into contact with the eyes or mouth.

If the lamp breaks and needs to be replaced with a new lamp, contact the place of purchase or see Where to Get Help for information on replacement. If the lamp breaks, pieces of broken glass may get scattered around inside the projector.

Particular care should be taken when the projector is installed to a ceiling, as small pieces of glass may fall down when the lamp cover is removed. If cleaning the projector or replacing the lamp yourself, be very careful not to allow such pieces of glass to get into the eyes or mouth.

If the lamp breaks and gas from the lamp or fragments of broken glass are inhaled or get into the eyes or mouth, or if any other ill effects are noticed, immediately seek medical advice.

If there is an electrical storm, do not touch the power plug, otherwise you may receive an electric shock.

Clean the inside of the projector periodically.

If the inside of the projector has not been cleaned for a long time, dust may build up and cause fire or electric shocks. Contact your dealer or Authorized EPSON Service Center to clean inside the projector at least once a year. A charge will be levied for this service.

If using a remote control that takes button-type batteries, keep these button-type batteries out of the reach of children. Batteries are choking hazards and can be very dangerous if swallowed.

If the batteries are swallowed, seek medical assistance immediately.
DECLARATION of CONFORMITY
According to 47CFR, Part 2 and 15
Class B Personal Computers and Peripherals; and/or
CPU Boards and Power Supplies used with Class B
Personal Computers

We: EPSON AMERICA, INC.
Located at: 3840 Kilroy Airport Way
MS: 3-13
Long Beach, CA 90806
Tel: 562-290-5254

Declare under sole responsibility that the product identified herein, complies
with 47CFR Part 2 and 15 of the FCC rules as a Class B digital device. Each
product marketed, is identical to the representative unit tested and found to be
compliant with the standards. Records maintained continue to reflect the
equipment being produced can be expected to be within the variation
accepted, due to quantity production and testing on a statistical basis as
required by 47CFR 2.909. Operation is subject to the following two conditions:
(1) this device may not cause harmful interference, and (2) this device must
accept any interference received, including interference that may cause
undesired operation.

Trade Name: EPSON
Type of Product: Projector
Model: EMP-S1+
Warranty

Epson America, Inc. Limited Warranty

Basic Two-Year Warranty and 90-Day Lamp Warranty

What Is Covered: Epson America, Inc. ("EPSON") warrants to the original retail purchaser of the EPSON product enclosed with this limited warranty statement that the product, if purchased new and used in the United States or Canada, conforms to the manufacturer’s specifications and will be free from defects in workmanship and materials for a period of two (2) years from the date of original purchase (except that the warranty period is 90 days for projector lamps). For warranty service, you must provide proof of the date of original purchase.

What EPSON Will Do To Correct Problems: If you elect carry-in warranty service, please bring the product securely packaged in its original container or an equivalent, along with proof of the date of original purchase, to your EPSON Dealer or EPSON Customer Care Center. EPSON will, at its option, repair or replace on an exchange basis the defective unit, without charge for parts or labor. When warranty service involves the exchange of the product or of a part, the item replaced becomes EPSON property. The exchanged product or part may be new or previously refurbished to the EPSON standard of quality, and at EPSON’s option, the replacement may be another model of like kind and quality. EPSON’s liability for replacement of the covered product will not exceed the original retail selling price of the covered product. Exchange or replacement products or parts assume the remaining warranty period of the product covered by this limited warranty. However, each replacement lamp carries the limited 90-day warranty stated above.

What This Warranty Does Not Cover: This warranty does not apply to refurbished or reconditioned products. This warranty covers only normal consumer use in the United States and Canada. 24-hour-per-day use does not cover consumables (e.g., fuses), other than lamps. This warranty is not transferable. EPSON is not responsible for warranty service should the EPSON label or logo or the rating label or serial number be removed or should the product fail to be properly maintained or fail to function properly as a result of misuse, abuse, improper installation, neglect, improper shipping, damage caused by disasters such as fire, flood, and lightning, improper electrical current, software problems, interaction with non-EPSON products, or service other than by an EPSON Authorized Servicer. Postage, insurance, or shipping costs incurred in presenting your EPSON product for carry-in warranty service are your responsibility. If a claimed defect cannot be identified or reproduced in service, you will be held responsible for costs incurred.

THE WARRANTY AND REMEDY PROVIDED ABOVE ARE EXCLUSIVE AND IN LIEU OF ALL OTHER EXPRESS OR IMPLIED WARRANTIES INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. SOME LAWS DO NOT ALLOW THE EXCLUSION OF IMPLIED WARRANTIES. IF THESE LAWS APPLY, THEN ALL EXPRESS AND IMPLIED WARRANTIES ARE LIMITED TO THE WARRANTY PERIOD IDENTIFIED ABOVE. UNLESS STATED HEREIN, ANY STATEMENTS OR REPRESENTATIONS MADE BY ANY OTHER PERSON OR FIRM ARE VOID. IN THE EVENT THE REMEDIES ABOVE FAIL, EPSON’S ENTIRE LIABILITY SHALL BE LIMITED TO A REFUND OF THE PRICE PAID FOR THE EPSON PRODUCT COVERED BY THIS LIMITED WARRANTY. EXCEPT AS PROVIDED IN THIS WRITTEN WARRANTY, NEITHER EPSON AMERICA, INC. NOR ITS AFFILIATES SHALL BE LIABLE FOR ANY LOSS, INCONVENIENCE, OR DAMAGE, INCLUDING DIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, RESULTING FROM THE USE OR INABILITY TO USE THE EPSON PRODUCT, WHETHER RESULTING FROM BREACH OF WARRANTY OR ANY OTHER LEGAL THEORY.

In Canada, warranties include both warranties and conditions.

Some jurisdictions do not allow limitations on how long an implied warranty lasts and some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitations and exclusions may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights, which vary from jurisdiction to jurisdiction.

To locate the Authorized EPSON Servicer nearest you, call the EPSON ConnectionSM at (800) 637-7661 + PIN or (562) 276-4394 in the U.S. and (905) 709-3839 in Canada or write to: Epson America, Inc., P.O. Box 93012, Long Beach, CA 90809-3012.
