## Overview
Describes the operating environment and system configuration of Server Direct Print.

## Sample Program
Describes how to use the sample program and how to configure the system.

## Request and Response
Describes the requests and responses of Server Direct Print.

## Status Notification
Describes the Status Notification function.
Cautions

• No part of this document may be reproduced, stored in a retrieval system, or transmitted in any form or by any means, electronic, mechanical, photocopying, recording, or otherwise, without the prior written permission of Seiko Epson Corporation.

• The contents of this document are subject to change without notice. Please contact us for the latest information.

• While every precaution has taken in the preparation of this document, Seiko Epson Corporation assumes no responsibility for errors or omissions.

• Neither is any liability assumed for damages resulting from the use of the information contained herein.

• Neither Seiko Epson Corporation nor its affiliates shall be liable to the purchaser of this product or third parties for damages, losses, costs, or expenses incurred by the purchaser or third parties as a result of: accident, misuse, or abuse of this product or unauthorized modifications, repairs, or alterations to this product, or (excluding the U.S.) failure to strictly comply with Seiko Epson Corporation’s operating and maintenance instructions.

• Seiko Epson Corporation shall not be liable against any damages or problems arising from the use of any options or any consumable products other than those designated as Original Epson Products or Epson Approved Products by Seiko Epson Corporation.

Trademarks

EPSON is a registered trademark of Seiko Epson Corporation.

Exceed Your Vision is a registered trademark or trademark of Seiko Epson Corporation.

For Safety

Key to Symbols

The symbols in this manual are identified by their level of importance, as defined below. Read the following carefully before handling the product.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>!</td>
<td>Provides information that must be observed to avoid damage to your equipment or a malfunction.</td>
</tr>
<tr>
<td>📝</td>
<td>Provides important information and useful tips.</td>
</tr>
</tbody>
</table>

Restriction of Use

When this product is used for applications requiring high reliability/safety such as transportation devices related to aviation, rail, marine, automotive etc.; disaster prevention devices; various safety devices etc; or functional/precision devices etc, you should use this product only after giving consideration to including fail-safes and redundancies into your design to maintain safety and total system reliability. Because this product was not intended for use in applications requiring extremely high reliability/safety such as aerospace equipment, main communication equipment, nuclear power control equipment, or medical equipment related to direct medical care etc, please make your own judgment on this product’s suitability after a full evaluation.
About this Manual

Aim of the Manual

This manual presents information that is necessary information for using the TM-Intelligent.
The TM-Intelligent series in this manual is a generic term for the TM-DT series, TM-i series, and TM-T88VI.
The TM-DT series in this manual is a generic term for the following printers.
- TM-H6000IV-DT
- TM-T70II-DT
- TM-T88V-DT
The TM-i series in this manual is a generic term for the following printers.
- TM-L90-i
- TM-T20II-i
- TM-T70-i
- TM-T82II-i
- TM-T83II-i
- TM-T88V-i
- TM-U220-i

Manual Content

The manual is made up of the following sections:

Chapter 1  Overview
Chapter 2  Sample Program
Chapter 3  Request and Response
Chapter 4  Status Notification

Overview

This chapter describes the overview of Server Direct Print and Status Notification.

Overview of Server Direct Print

Server Direct Print function enables the TM intelligent printer to obtain the print data from the Web server and print the data. The Web server application performs printing by including print data in the response to a print request from the TM intelligent printer.

TM intelligent printer periodically sends a print request ((1) in the figure above) to the Web server. The Web server application includes print data in the response ((2) in the figure above) to a print request from the TM intelligent printer. (When no print data exists, the Web server returns an empty response.) If print data for the TM printer is included in a response, the TM intelligent printer controls the TM printer in order to do the printing ((3) in the figure above).

The print data can be printed in the ePOS-Print XML format. Upon receipt of a response of print data including print layout from the Web server application, the TM intelligent printer converts the ePOS-Print XML format into the print layout and prints it.

If the spooler is enabled in the TM intelligent printer, print data can be saved in the spooler, which allows an operation in which the next print request can be processed regardless of the printer status. *If forwarding is set in the TM intelligent printer, print data can be printed from another printer when it cannot be printed from the printer. *1

It also allows you to control display of a Customer Display connected to the printer. *2

*1: For TM-i Firmware Ver.4.1 or later of the TM-i series. For TM-DT Software Ver.3.0 or later of the TM-DT series.
*2: Only for TM-T88VI.
**Difference from General Printing System**

In general printing systems, the application sends a print instruction to the printer. With Server Direct Print, the printer sends an inquiry of print request to the Web application, and the Web application returns a response that has print data included in it.

---

**General Printing**

- **Computer**
  - **Application**
    - Specifies a printer
    - Print layout data
  - **TM Printer**
    - Print data

**Server Direct Print**

- **Web Server**
  - **Application**
    - Global IP Address
  - **TM Intelligent Printer**
**Printing Process**

1. TM intelligent printer sends a request (print request) to the Web server. This request is sent periodically at the set timing.

2. When data to be printed exists, the Web server application creates an XML-format response containing the data to be printed, and returns it to the TM intelligent printer. When no data to be printed exists, an empty response is returned.

3. TM intelligent printer prints the data to the specified printer.

4. TM intelligent printer sends a printing result request (printing result). *

5. Upon receipt of the printing result, the application performs the required process. The Web server automatically responds with an empty response.

*: If the spooler is enabled in the TM intelligent printer, a request (print result) is returned upon receipt of a response (print request).

(For TM-i Firmware Ver.4.1 or later of the TM-i series. For TM-DT Software Ver.3.0 or later of the TM-DT series. For TM-T88VI)

The printing flow is as follows:

1 : HTTP Request (Print request)  
2.2 : HTTP Response (Print request)  
3 : Create print data  
4 : Print  
5 : HTTP Request (Printing result)  
6.2 : HTTP Response (Printing result)  
2.1 : Create XML from a database or other system  
6.1 : Register printing result to a database or other system
Response Data

When the Web server creates HTTP response (print request) data, the following points must be considered.

**HTTP Response (Print request) version**

Some functions can be added by specifying the `<PrintRequestInfo>` tag version of HTTP response (print request). These functions may be unavailable depending on the TM intelligent printer model or version. The syntax of the HTTP request (printing result) from TM intelligent printer is different depending on the `<PrintRequestInfo>` tag version.

There is no compatibility between versions. Check the printer before use.

</table>
Overview of Status Notification

Status Notification is the function used to periodically notify the printer status to the Web server. The web server registers status from TM intelligent printer to database, then responds with an empty response to TM intelligent printer.

Operating the printer management application created by the user with the Web server enables grasp of the status of the printers installed in a shop from a remote place.
Operating Environment

**TM Intelligent Printer**

The TM Intelligent Printers that allow you to use Server Direct Print are listed below.

<table>
<thead>
<tr>
<th>TM Intelligent Printer</th>
<th>Software</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td></td>
<td>TM-T70-i</td>
</tr>
<tr>
<td></td>
<td>TM-U220-i</td>
</tr>
</tbody>
</table>

For the utility to register the NV logo to a printer other than the TM intelligent printer, refer to the Technical Reference Guide for each printer.

Download

For customers in North America, go to the following web site:
http://www.epson.com/support/ and follow the on-screen instructions.
For customers in other countries, go to the following web site:
https://download.epson-biz.com/?service=pos
Restriction

- If power is restored the device or the cover is open during printing, printing may not occur properly.
- To turn the device power off and on, be sure to allow an interval of five seconds or more between power off and on.
- Use a switching hub to connect the device.
  If no switching hubs are used, the device in online status is more likely to be judged as offline depending on the traffic condition.
- Drawer open operates when the TM intelligent printer is in online status (when the roll paper is loaded and the roll paper cover is closed).
  If you are using a TM-i series (TM-i firmware Version 3.0 or later), TM-DT series (TM-DT software Version 2.2 or later) and TM-T88VI, if you designate forced transmission mode with ePOS-Print XML, it will operate offline.
- When the specified timeout time has passed after printing starts, the printing is canceled, but the data recognized by the printer before print cancelling process starts is printed.
- Messages that contain BOM are not supported.
- The only supported character encoding is UTF-8.
- If you want to send a larger amount of data, you need to divide it into smaller quantities first.
  - TM-T88VI
    2 MB
  - TM-DT series / TM-i series
    These values depend on the TM-i firmware or TM-DT software version, and on the printing speed of the printer. For details regarding the printing speed of the printer, refer to the Technical Reference Guide for each TM printer.

<table>
<thead>

</tbody>
</table>
Sample Program

This chapter describes how to use the sample program for Server Direct Print.

- In this chapter, a system configuration using a Web server is explained as an example.
- In this chapter, the Web server is described as a Web server configured with IIS (Microsoft Internet Information Services).
  When using other environment, interpret the descriptions accordingly.

Overview

Use the sample program screen to enter orders. The Web server sends a response containing print data for a request sent from the TM intelligent printer. The TM intelligent printer uses the returned response data to print a delivery slip to the main unit and two pieces of cooking slip to the TM printer. The print results appear on the screen.

Different programs are available for each <PrintRequestInfo> version.

Version 1.00

![Server Direct Print screenshot](image-url)
Version 2.00
Specification of Version 2.00 is available in the TM-i Firmware Ver.4.1 or later/TM-DT Software Ver.3.0 or later/ TM-T88VI.
Version 3.00

Specification of Version 3.00 is available in only TM-T88VI.
Hardware Configuration (For Ver.1.00 or Ver.2.00)

The system configuration of the sample program is as shown below.

- **Web Server**
  (192.168.192.10)

- **Router**
  (192.168.192.1)

- **TM Intelligent Printer**
  (TM-T88V-i)
  (192.168.192.20)

- **TM Printer**
  (192.168.192.21)

- Web Server
  (Its operation has already been checked using IIS and XAMPP)

- Router

- TM Intelligent Printer

- TM Printer
Hardware Configuration (For Version 3.00)

The system configuration of the sample program is as shown below.

- Web Server
  (192.168.192.10)
  (Its operation has already been checked using IIS and XAMPP)
- Router
- TM-T88VI
- Customer Display

Program Flow

The flow from the initial display to the print completion of the sample program is as shown below.

1. Start the browser.
2. Enter the order.
3. Receive a request from the printer.
4. Responses print data (sample.xml) to the printer.
5. Output the printing result sent from the printer to resultPrint.log after printing.
6. Display the printing result on the screen.
**Environment Settings**

The environment setting flow of the sample program is as shown below.

1. **Router Settings**
   Set information such as SSID, IP address, DHCP and allocated IP address. For details, see the manual for each device.

2. **Web Server Settings**
   1. **Web Server Configuration**
      Configure IIS and XAMPP in the computer.
   2. **Sample Program Configuration (p.25)**
      Save the sample program files in the computer.
   3. **Network Settings**
      Configure the network settings such as IP address to the computer.

3. **TM Printer Network Settings**
   Configure the network settings such as IP address to the TM printer to be connected.
   Configure the network settings such as IP address to the printer by using EPSON TMNet WebConfig from a Web browser on the setup computer.
   For the configuration procedure, refer to the Technical Reference Guide for each TM printer.
4. TM Intelligent Printer Settings

- TM-i series (p. 26)
  - IP Address Setting
  - Server Direct Print Setting
    (Including Server authentication setting and Proxy server setting)
  - Register the TM Printers (Device ID, IP Address)
- TM-DT series (p. 30)
  - IP Address Setting
  - Initial OS Settings
  - Initializing the ePOS-Device
  - Service Startup Settings
  - Server Direct Print Setting
  - Register the TM Printers (Device ID, IP Address)
- TM-T88VI (p. 33)
  - IP Address Setting
  - Server Direct Print Setting
    (Including Server authentication setting and Proxy server setting)
  - Register the TM Printers (Device ID, IP Address)
## Sample Program Configuration

Save the sample program files to the Web server. Save the files directly under the following folders:

<table>
<thead>
<tr>
<th>Environment</th>
<th>Folder</th>
<th>Saved File</th>
</tr>
</thead>
<tbody>
<tr>
<td>IIS</td>
<td>inetpub\wwwroot</td>
<td>Test_print.php</td>
</tr>
<tr>
<td></td>
<td></td>
<td>demo\index.html</td>
</tr>
<tr>
<td></td>
<td></td>
<td>\sample.xml</td>
</tr>
<tr>
<td>XAMPP</td>
<td>xampp\htdocs</td>
<td>(Expansion of epsonsamp_eaposprint.zip)</td>
</tr>
</tbody>
</table>

For details about how to create a zip file, refer to the Technical Reference Guide for each printer.
TM Intelligent Printer Settings

TM-i Series Settings

- IP Address Setting: Refer to the Technical Reference Guide for each printer.
- Server Direct Print Setting: p. 26
  - Server authentication setting (TM-i Firmware Ver.4.0 or later, available)
  - Proxy server setting (TM-i Firmware Ver.4.0 or later, available)
- Register the TM Printers: p. 29

Server Direct Print Settings

Configure the Server Direct Print settings by using EPSON TMNet WebConfig. For TM-i Firmware Ver.4.0 or later, configure the server authentication and the proxy server settings when necessary. For TM-i Firmware Ver.3.x or earlier, the server authentication and proxy server setting are unavailable.

1. Start the Web browser on the setup computer and enter as follows:
   - For TM-i Firmware Ver.4.0 or later: http://[IP address of the TM-i series]/webconfig/
   - For TM-i Firmware Ver.3.x or earlier: http://[IP address of the TM-i series]/PrinterConfigurationPage/

2. EPSON TMNet WebConfig starts.
   - For TM-i Firmware Ver.4.0 or later, select (Web Service Settings) - (Direct Print).
   - For TM-i Firmware Ver.3.x or earlier, select (Configuration) - (Direct Print).
The “Server Direct Print Setting” screen appears.
Set the following items and click (Submit) / (Apply).

For TM-i Firmware Ver.4.0 or later

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server Direct Print</td>
<td>Select the (Enable).</td>
</tr>
<tr>
<td>ID</td>
<td>Set ID for the server-side program to identify TM-I series. This ID becomes the user ID used for Digest access authentication. The set value will also be passed as an ID parameter value for the form data posted to the server. Not required for the sample program.</td>
</tr>
<tr>
<td>Password</td>
<td>Set your password used for Digest access authentication. The Digest access cannot be authenticated for user IDs without passwords. To authenticate the Digest access, configure a password that is not empty. Not required for the sample program.</td>
</tr>
<tr>

Registration of TM Printer
Register the device ID and IP address of the controlled TM printer to TM-i series. Use EPSON TMNet WebConfig to register the device ID.

- TM-i printer cannot be deleted from the device.
- The device ID of TM-i printer can be changed.

1. Connect all TM printers to the network and power on.

2. EPSON TMNet WebConfig starts.
   For TM-i Firmware Ver.4.0 or later, select [Web Service Settings] - [Direct Print].
   For TM-i Firmware Ver.3.x or earlier, select [Configuration] - [Direct Print].

3. The “Printer” / “Device Settings” screen appears.
   Set the following items and click [Add] / [Submit].

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device ID</td>
<td>Set the ID for the controlled printer. (Any character string)</td>
</tr>
<tr>
<td>Model</td>
<td>Select the model for the controlled printer.</td>
</tr>
<tr>
<td>IP Address</td>
<td>Set the printer IP address for each device ID.</td>
</tr>
<tr>
<td>Retry Interval (ms)</td>
<td>Set the timeout retry interval. Specify &quot;100&quot;.</td>
</tr>
</tbody>
</table>

4. The information of the registered device is displayed.
   Click [Test Print] to check if the registered printer operates properly.
**TM-DT Series Settings**

Configure the following settings to TM-DT series.

- Initial OS Settings: Refer to the Technical Reference Guide for each printer.
- Initializing the ePOS-Device: Refer to the Technical Reference Guide for each printer.
- IP Address Settings: Refer to the Technical Reference Guide for each printer.
- Service Startup Settings: p. 30
- Server Direct Print Settings: p. 31
- Registration of TM Printer: p. 32

**Service startup settings**

To make service startup settings, use EPSON TMNet WebConfig and the following procedure.

1. Start EPSON TMNet WebConfig from the shortcut on the desktop. EPSON TMNet WebConfig starts.

   ![Note]
   
   If you are making settings from an external device, set the TM-DT series IP address in the address for the Web browser. The default IP address for TM-DT series is 192.168.192.168. http://[IP address of the TM-DT series]/webconfig/

2. Select as (Settings)-[Web service settings]-[Startup settings].

3. The "Startup settings" screen appears. Set the following according to the system you are using, and then click (Apply).

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device control</td>
<td>Sets whether to use TM-DT series to control peripheral POS devices.</td>
<td>On (Default)</td>
</tr>
<tr>
<td>Automatic update of web content</td>
<td>Sets whether to automatically update web content.</td>
<td>Off</td>
</tr>
<tr>
<td>Server direct print</td>
<td>Sets whether to use server direct print.</td>
<td>On</td>
</tr>
<tr>
<td>Status notification</td>
<td>Sets whether to send status notification when using the server direct print function.</td>
<td>On/Off</td>
</tr>
</tbody>
</table>
Server Direct Print Settings
Configure the Server Direct Print settings using EPSON TMNet WebConfig.

1 EPSON TMNet WebConfig starts.
For TM-DT Software Ver.2.5 or later, select [Settings]-[Web service settings]-[Server access]-[Direct Print].
For TM-DT Software Ver.2.2 or earlier, select [Settings]-[Web service settings]-[Direct print].

2 The "Server direct print" screen appears.
Set the following items and click [OK].
For TM-DT Software Ver.3.0 or later:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ID</td>
<td>Set ID for the server-side program to identify TM-DT series. This ID becomes the user ID used for Digest access authentication. The set value will also be passed as an ID parameter value for the form data posted to the server. Not required for the sample program.</td>
</tr>
<tr>
<td>Password</td>
<td>Set your password used for Digest access authentication. Not required for the sample program.</td>
</tr>
<tr>
<td>Server 1</td>
<td>Specify the Test_print.php address of the Web server. Example: http://[IP address of the Web server]/Test_print.php Click the [Access Test] to check if the address is accessible.</td>
</tr>
<tr>
<td>Interval (sec.)</td>
<td>Set the request interval. Request interval refers to the interval between the end of the previous communication and the start of the next communication.</td>
</tr>
<tr>
<td>Server Authentication</td>
<td>When accessing by https, this sets whether or not server authentication is conducted based on a registered certificate.</td>
</tr>
</tbody>
</table>

For TM-DT Software Ver.2.6 or earlier:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ID</td>
<td>Set ID for the server-side program to identify TM-DT series. This ID becomes the user ID used for Digest access authentication. The set value will also be passed as an ID parameter value for the form data posted to the server. Not required for the sample program.</td>
</tr>
<tr>
<td>Password</td>
<td>Set your password used for Digest access authentication. Not required for the sample program.</td>
</tr>

<td>URL</td>
<td>Specify the Test_print.php address of the Web server. Example: http://[IP address of the Web server]/Test_print.php Click the [Access Test] to check if the address is accessible.</td>
</tr>
<tr>
<td>Interval (sec.)</td>
<td>Set the request interval. Request interval refers to the interval between the end of the previous communication and the start of the next communication.</td>
</tr>
</tbody>
</table>
Registration of TM Printer

Register the device ID and IP address of the controlled TM printer to TM-DT series. Use EPSON TMNet WebConfig to register the device ID. This printer is already registered with the "local_printer" device ID, and therefore this setting is not required.

Use the following procedure for registration.

1. Connect all TM printers to the network and power on.
2. EPSON TMNet WebConfig starts.
   Select (Settings)-(Web service settings)-(Device Admin)-(Device registration)-(Printer).
3. The "Printer" screen appears.
   Set the following items and click (Add).

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device ID</td>
<td>Set the ID for the controlled printer. (Any character string)</td>
</tr>
<tr>
<td>Model no.</td>
<td>Select the model for the controlled printer.</td>
</tr>
<tr>
<td>IP address</td>
<td>Set the printer IP address for each device ID.</td>
</tr>
<tr>
<td>Retry interval (ms)</td>
<td>Set the timeout retry interval. Specify &quot;100&quot;.</td>
</tr>
</tbody>
</table>

4. The information of the registered device is displayed in "Registered printers".
   Click (Test Print) to check if the registered printer operates properly.
**TM-T88VI Settings**

Configure the following settings to TM-T88VI.

- **IP Address Settings**: Refer to the Technical Reference Guide for each printer.
- **Server Direct Print Settings**: p. 33
  - Server authentication setting
  - Proxy server setting
- **Registration of TM Printer**: p. 35

**Server Direct Print Settings**

Configure the Server Direct Print settings using TM-T88VI Utility.

1. **Starting the TM-T88VI Utility.**
2. **After TM-T88VI Utility starts, click (TM-Intelligent) - (Server Direct Print).**
3. **The Server Direct Print screen appears.**
   Set the following items and click (Set).

<table>
<thead>
<tr>
<th>Item</th>

</tbody>
</table>
**Registration of TM Printer**

Register the device ID and the IP address of the TM printer to be controlled. Use the following procedure for registration.

1. Connect the Customer Display to TM-T88VI.
2. Connect all TM printers to the network and power on.
   Click the (TM-Intelligent) - (Device Administration) - (Printer Registration).
4. The Printer Registration screen appears.
5. Registered network printers are displayed as a list. Click (Add).
6. The "Add" window is displayed. Set the information of the printer to be registered. After setting, click (OK).

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device ID</td>
<td>Sets the device ID of a printer to register. You can use half-width alphanumeric characters, underscores, full stops and hyphens in the device ID. Enter between 1 to 30 characters.</td>
</tr>
<tr>
<td>Model</td>
<td>Selects the model of a printer to register.</td>
</tr>
<tr>
<td>IP Address</td>
<td>Sets the IP address of a printer to register.</td>
</tr>
</tbody>
</table>

7. Adds a printer to the List.
8. Click the (Set). The settings are reflected in the printer.
Execution of Sample Program

1. When using the TM-DT series or TM-i series, confirm that Server Direct Print is enabled in EPSON TMNet WebConfig.
   When using TM-T88VI, confirm that Server Direct Print is enabled in TM-T88VI Utility.

2. Open the sample program page from the Web browser.
   Example: [IP address of the Web server]/demo/index.html

3. Click (Order Entry).

4. In response to a request from the TM intelligent printer, print data is sent and a slip is printed from the printer.

5. resultPrint.log is created from the printing result sent from the TM intelligent printer and the printing result is displayed on the screen.
Request and Response

This chapter describes requests from the TM intelligent printer and responses from the Web server. User's application can start printing by returning a response containing print data to a HTTP POST request (print request) from the printer. It can also check if printing is properly finished by analyzing a HTTP POST request (print request) from the printer.

Request (Print Request)

This section describes the request (print request) from the TM-i series.

TM intelligent printer periodically sends a HTTP POST request (print request) shown below. The format of request message is URL-encoded form data (application/x-www-form-urlencoded). Set the sending destination and sending interval according to “Server Direct Print Settings” (p. 26). If communication fails, it is attempted again after a specified interval.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectionType</td>
<td>GetRequest</td>
</tr>
<tr>
<td>ID</td>
<td>The ID set with WebConfig (p. 26)</td>
</tr>
</tbody>
</table>

Header

```
POST /demo/Test_print.php HTTP/1.1
Host: 192.168.192.10
Content-Type: application/x-www-form-urlencoded
Content-Length: 29

ConnectionType=GetRequest&ID=
```
Response (Print request)

This section describes the response (print request) containing the print data from the Web server.

Response data created in XML (text/xml) from the application is returned. The data also contains print data. When an invalid print request is received, the server retries a request (print request) after a specified interval.
Format of the response message

Basic Structure
The structure is different depending on the <PrintRequestInfo> version.

<PrintRequestInfo Version="1.00">
When no version for the <PrintRequestInfo> tag is specified, the same structure as with <PrintRequestInfo Version="1.00"> is applied.
Create the <ePOSPrint> tag for each print request.
The <ePOSPrint> tag consists of the following tags:
- <Parameter> tag: For details, see "<Parameter> Tag" (p.42).
- <PrintData> tag: For details, see "<PrintData> Tag" (p.42).

HTTP/1.1 200 OK
Content-Type: text/xml; charset=utf-8
Content-Length: xxx
<?xml version="1.0" encoding="utf-8"?>
<PrintRequestInfo Version="1.00">
  <ePOSPrint>
    <Parameter>
      <devid>local_printer</devid>
      <timeout>10000</timeout>
    </Parameter>
    <PrintData>
      .
      .
    </PrintData>
  </ePOSPrint>
</PrintRequestInfo>

Note: Enclosing the <ePOSPrint> tag in the <PrintRequestInfo> tags enables sending multiple print requests to the printer.
Specify the print job ID with the `<printjobid>` tag in the `<Parameter>` tab. Create the `<ePOSPrint>` tag for each print request. The `<ePOSPrint>` tag consists of the following tags:

- `<Parameter>` tag: For details, see "<Parameter> Tag" (p.42).
- `<PrintData>` tag: For details, see "<PrintData> Tag" (p.42).

You can specify the print job ID with the TM-i series TM-i firmware Ver. 4.1 and later, TM-DT series TM-DT software Ver. 3.0 and later, and TM-T88Vi.
<PrintRequestInfo Version="3.00">

Available with TM-T88VI.

Printing to the printer and control of customer display can be performed.

- **<ePOSPrint> tag**: Printer control
- **<ePOSDisplay> tag**: Customer display control

The **<ePOSPrint>/<ePOSDisplay>** tag consists of the following tags:

- **<Parameter>** tag: For details, see "<Parameter> Tag" (p.42).
- **<PrintData>** tag: For details, see "<PrintData> Tag" (p.42).
- **<DisplayData>** tag: For details, see "<DisplayData> Tag" (p.42).

```xml
HTTP/1.1 200 OK
Content-Type: text/xml; charset=utf-8
Content-Length: xxx

<?xml version="1.0" encoding="utf-8"?>
<PrintRequestInfo Version="3.00">
  <ePOSPrint>
    <Parameter>
      <devid>local_printer</devid>
      <timeout>10000</timeout>
      <printjobid>ABC123</printjobid>
    </Parameter>
    <PrintData>
    .
    .
    .
  </PrintData>
  </ePOSPrint>

  <ePOSDisplay>
    <Parameter>
      <devid>local_display</devid>
      <timeout>10000</timeout>
      <printjobid>ABC456</printjobid>
    </Parameter>
    <DisplayData>
    .
    .
    .
  </DisplayData>
  </ePOSDisplay>
</PrintRequestInfo>
```
<Parameter> Tag

Set the <Parameter> tag as shown below.

<PrintRequestInfo Version="1.00">

<Parameter>
  <devid>(Device ID used for slip printing)</devid>
  <timeout>(Timeout time (in milliseconds))</timeout>
</Parameter>

Example

<Parameter>
  <devid>local_printer</devid>
  <timeout>10000</timeout>
</Parameter>

<PrintRequestInfo Version="2.00">/<PrintRequestInfo Version="3.00">

You can specify the print job ID with the TM-i series TM-i firmware Ver. 4.1 and later, TM-DT series TM-DT software Ver. 3.0 and later, and TM-T88VI.

If specifying a print job ID, specify the print job ID in the <printjobid> tag of the <Parameter> tag. The print job ID must have 1 to 30 characters and allowable characters are alphanumerical characters, underscore, hyphen and period.

Specify the print job ID

<Parameter>
  <devid>local_printer</devid>
  <timeout>10000</timeout>
  <printjobid>ABC123</printjobid>
</Parameter>

<PrintData> Tag

Describe print data. Even if the <PrintRequestInfo> version is different, the print data can be shared. For details, see ePOS-Print XML User’s Manual.

<DisplayData> Tag

The <DisplayData> tag is available with <PrintRequestInfo Version="3.00">.

For details, see ePOS-Print XML User’s Manual.
Print Data Example

Response When No Printing Is Performed

When no printing is required, to notify no print data, the following response is returned for a HTTP request (print request) sent from the TM intelligent printer.
See Test_print.php of the sample program.

HTTP/1.1 200 OK
Content-Type: text/xml; charset=utf-8
Content-Length: 0
Request (Printing Result)

TM intelligent printer sends a HTTP POST request (printing result) shown below after printing.

The application can check the printing result (if printing is properly finished) and the printer status by analyzing request data. If communication fails, it is attempted again after a specified interval.

Format of the request message

POST /demo/Test_print.php HTTP/1.1
Host: 192.168.192.10
Content-Type: application/x-www-form-urlencoded
Content-Length: xxx

ConnectionType=SetResponse&ID=&ResponseFile=Printing Result

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectionType</td>
<td>SetResponse</td>
</tr>
<tr>
<td>ID</td>
<td>The ID set with WebConfig (p. 26)</td>
</tr>
<tr>
<td>ResponseFile</td>
<td>Printing result</td>
</tr>
</tbody>
</table>
Basic Structure

The structure of a request (printing result) created by the TM intelligent printer is different depending on the
<PrintRequestInfo> version contained in the response (print request) from the Web server.

<PrintRequestInfo Version="1.00">
In the <PrintResponseInfo> tag, the printing result is included in the <response> tag.
When no version for the <PrintRequestInfo> tag is specified, the same structure as with
<PrintRequestInfo Version="1.00"> is applied.

<?xml version="1.0" encoding="utf-8"?>
<PrintResponseInfo Version="1.00">
  #Success
  <response xmlns="http://www.epson-pos.com/schemas/2011/03/epos-print"
            success="true" code="" status="251854870" battery="0"/>
</PrintResponseInfo>

<PrintRequestInfo Version="2.00">
The <ePOSPrint> tag is created in the <PrintResponse> tag, and the <Parameter> tag and <PrintResponse>
tag are created.
In the <Parameter> tag, the device ID is included in the <devid> tag and the print job ID is included in the
<printjobid> tag.
In the <PrintResponseInfo> tag, the printing result is included in the <response> tag.
This is the same structure as with <PrintRequestInfo Version="1.00">.

<?xml version="1.0" encoding="utf-8"?>
<PrintResponseInfo Version="2.00">
  <ePOSPrint>

    </PrintResponse>
  </ePOSPrint>
</PrintResponseInfo>
Chapter 3  Request and Response

<PrintRequestInfo Version="3.00">

The printer confirms the data when it receives an HTTP response (print request).
If the data contains an error, a different request message than usual is sent.
The <ServerDirectPrint> tag contains the confirmation result for the HTTP response (print request) XML data.
If the HTTP response (print request) XML data contains an error, the structure of the request (printing result)
varies.

- When the HTTP response (print request) XML data is normal:
  In the <PrintResponseInfo> tag, the <ServerDirectPrint> tag, <ePOSPrint> tag, and <ePOSDisplay> tag are created.
The confirmation result of the HTTP response (print request) XML data is described in the <Response> tag
in the <ServerDirectPrint> tag.
The <response> tag is created in the <PrintResponse> tag in the <ePOSPrint> tag, and details of the printing result are described there.
The <response> tag is created in the <DisplayResponse> tag in the <ePOSDisplay> tag, and details of the
customer display control result are described.

```xml
<?xml version="1.0" encoding="UTF-8"?>
<PrintResponseInfo Version="3.00">
  <ServerDirectPrint>
    <Response Success="true"/>
  </ServerDirectPrint>
  <ePOSPrint>
    <Parameter>
      <devid>local_printer</devid>
      <printjobid>ABC123</printjobid>
    </Parameter>
    <PrintResponse>
      <response xmlns="http://www.epson-pos.com/schemas/2011/03/epos-print" success="true" code="9" status="251658262" battery="0"/>
    </PrintResponse>
  </ePOSPrint>
  <ePOSDisplay>
    <Parameter>
      <devid>local_display</devid>
      <printjobid>ABC456</printjobid>
    </Parameter>
    <DisplayResponse>
      <response xmlns="http://www.epson-pos.com/schemas/2012/09/epos-display" success="false" code="EDSP_NOT_FOUND" status="0"/>
    </DisplayResponse>
  </ePOSDisplay>
</PrintResponseInfo>
```
When the HTTP response (print request) XML data has an error:
A ResponseFile is returned, which includes the printing result in the <Response> tag of the
<ServerDirectPrint> tag.
For details, see "<PrintData> Tag" (p.42).
The ResponseFile does not contain the <ePOSPrint> tag or the <ePOSDisp> tag.

![Example of a success](image)

**<response> tag**

Use the success element of the <response> tag to confirm the printing result and the control result * of the
customer display.

* For <PrintRequestInfo Version="3.00">
For details about the code element and the status element, refer to the ePOS-Print XML User's Manual.

    </Parameter>
    <DisplayResponse>
      <response xmlns="http://www.epson-pos.com/schemas/2012/09/epos-display" success="false" code="EDSP_NOT_FOUND" status="0"/>
    </DisplayResponse>
  </ePOSDisplay>
</PrintResponseInfo>
```
## Error code

### Request Error

This occurs when the device has a problem. The following table shows errors that can occur.

<table>
<thead>
<tr>
<th>Code</th>
<th>Message</th>
<th>Cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>EPTR_AUTOMATICAL</td>
<td>An automatically recoverable error occurred.</td>
<td>Continuous printing of high-density printing</td>
</tr>
<tr>
<td>EPTR_BATTERY_LOW</td>
<td>No remaining battery.</td>
<td>No battery</td>
</tr>
<tr>
<td>EPTR_COVER_OPEN</td>
<td>The device has a problem.</td>
<td>The cover is open.</td>
</tr>
<tr>
<td>EPTR_CUTTER</td>
<td>The device has a problem.</td>
<td>The cutter has a foreign matter.</td>
</tr>
<tr>
<td>EPTR_MECHANICAL</td>
<td>The device has a problem.</td>
<td>Mechanical error, etc.</td>
</tr>
<tr>
<td>EPTR_REC_EMPTY</td>
<td>There is no paper.</td>
<td>No paper</td>
</tr>
<tr>
<td>EPTR_UNRECOVERABLE</td>
<td>An unrecoverable error occurred.</td>
<td>Low voltage</td>
</tr>
<tr>
<td>EX_BADPORT</td>
<td>The port is invalid or the device is not connected.</td>
<td>The registered information is invalid. The device power is off. The device is not connected. Other device control software exists on the system.</td>
</tr>
<tr>
<td>EX_TIMEOUT</td>
<td>Timeout occurred.</td>
<td>The process was not completed within a certain period of time. A large amount of data was sent with 1 method.</td>
</tr>
<tr>
<td>SchemaError</td>
<td>The message does not conform to the schema.</td>
<td>The request message is invalid.</td>
</tr>
<tr>
<td>DeviceNotFound</td>
<td>No device is found.</td>
<td>Inaccessible due to a problem in the operation status control in the output destination device.</td>
</tr>
<tr>
<td>PrintSystemError</td>
<td>An error occurred in the printing system.</td>
<td>Inaccessible due to a problem in the operation status in the TM intelligent printer.</td>
</tr>
</tbody>
</table>

**Error occurs in `<PrintRequestInfo Version="2.00">` or later**

<table>
<thead>
<tr>

</tr>
<tr>
<td></td>
<td>&lt;/PrintResponseInfo&gt;</td>
</tr>
</tbody>
</table>
Response (Printing Result)

The Web server sends a response (print result) upon receipt of print result to the TM intelligent printer.

The format of response message is XML (text/xml).
If communication failed, wait the specified interval then retry communication.
The Web server automatically returns the following response.

```
HTTP/1.1 200 OK
Content-Type: text/xml; charset=utf-8
Content-Length: 0
```
Digest Access Authentication

This section describes the flow and settings for carrying out Digest access authentication with the web server.

For Digest access authentication, the printer sends a dummy HTTP request before sending a print-related request to the server. The server returns a response with HTTP status code "401 Unauthorized". The printer sends a print-related request containing the user ID and password. The server carries out the Digest access authentication process. Once authenticated, the server continues to carry out the print-related process.

Digest Access Authentication Settings

Digest access authentication requires settings for the TM intelligence printer and the server.

TM Intelligent Printer

Use EPSON TMNet WebConfig of TM-i series/TM-DT series to set your user ID and password required for Digest access authentication.

For details, see "Server Direct Print Settings" for individual TM intelligent printers.

TM-T88VI is set by the TM-T88VI Utility.

Web Server Settings

For detailed information on how to set Web server's Digest access authentication, see individual Web server documents, etc.
<?php
header('Content-Type: text/xml; charset=UTF-8');
define("REQUEST XML_PATH", "demo/request/sample.xml");
define("RESPONSE XML_PATH", "demo/response/sample.xml");
if (isset($_POST["ConnectionType"])) {
    $http_request = $_POST["ConnectionType"];
}
if ($http_request == 'GetRequest') {
    # send print data
    # ID
    
    $shop_id = $_POST["ID"];  
    # create print data
    if (file_exists(REQUEST_XML_PATH)) {
        # return print data
        $handle = fopen(REQUEST_XML_PATH, "r");
        fpassthru($handle);
        fclose($handle);
        # move file
        rename(REQUEST_XML_PATH, RESPONSE_XML_PATH);
    }
    else if ($http_request == 'SetResponse') {
        # get print result
        $xml = simplexml_load_string($_POST["ResponseFile"], $version = $xml["Version");
        if ($version == '1.00') {
            # save log
            $fhandle = @fopen("ResultPrint.log", "wt");
            fprintf($fhandle, "PrintResponseInfo Version %s\n", $version);
            foreach ($xml->response as $response) {

        }
    else {
        # Ignore other version
    }
}
else {
    # Ignore other connectionType than GetRequest and SetResponse.
}?>
Status Notification

This chapter describes the Status Notification function.

Overview

Status Notification is used to periodically notify the TM intelligent printer status to the Web server. The Web server automatically responds with an empty response.

Operating the printer management application created by the user with the Web server enables grasp of the status of the printers installed in a shop from a remote place.

For TM-DT series, enable the following settings in EPSON TMNet WebConfig.
- ePOS-Device
- Service startup settings (p. 30)
- Device control (p. 30)
- Server direct print (p. 31)
- Status notification (p. 30)

For TM-T88VI, enable the following settings in TM-T88VI Utility.
- ePOS-Print
- Server Direct Print
- Status Notification
Overview of Status Notification Sample Program

This program displays the status of the connected printer on the screen. For the configuration such as Hardware Configuration (p. 20) and Environment Settings (p. 23), the same configuration is used as with the Server Direct Print.

File Configuration

<table>
<thead>
<tr>
<th>File Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Test_status.php</td>
<td>Obtains and displays the result in response to a request from the printer.</td>
</tr>
<tr>
<td>resultPrint.log</td>
<td>The printing result is retained in this file. The file is created after printing.</td>
</tr>
<tr>
<td>demo test/Status.html</td>
<td>Displays the printer status.</td>
</tr>
</tbody>
</table>

TM Intelligent Printer Settings

The registration screen will vary according to the model of TM Intelligent printer.

- "TM-i Series Settings" (p. 58)
- "TM-DT Series Settings" (p. 60)

**TM-i Series Settings**

Configure the Status Notification settings using EPSON TMNet WebConfig. Use the following procedure for registration.

1. Connect the printer to the network and turn the power ON.

2. Start the Web browser on the setup computer and enter as follows:
   - For TM-i Firmware Ver.4.0 or later
     http://[IP address of the TM-i series]/webconfig/
   - For TM-i Firmware Ver.3.x or earlier
     http://[IP address of the TM-i series]/PrinterConfigurationPage/

3. EPSON TMNet WebConfig starts.
   - For TM-i Firmware Ver.4.0 or later, select (Web Service Settings) - (Status Notification).
   - For TM-i Firmware Ver.3.x or earlier, select (Configuration) - (Status Notification).
The "Status Notification" / "Status Notification Settings" screen appears.
Set the following items and click [Apply] / [Submit].

For TM-i Firmware Ver.4.0 or later

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Status Notification</td>
<td>Select the [Enable].</td>
</tr>
<tr>
<td>ID</td>
<td>Set ID for the server-side program to identify TM-i series. This ID becomes the user ID used for Digest access authentication. The set value will also be passed as an ID parameter value for the form data posted to the server. Not required for the sample program.</td>
</tr>
<tr>
<td>Password</td>
<td>Set your password used for Digest access authentication. The Digest access cannot be authenticated for user IDs without passwords. To authenticate the Digest access, configure a password that is not empty. Not required for the sample program.</td>
</tr>
<tr>

</tr>
<tr>
<td>Interval(s)</td>
<td>Set the request interval. Request interval refers to the interval between the end of the previous communication and the start of the next communication.</td>
</tr>
</tbody>
</table>
**TM-DT Series Settings**

Configure the Status Notification settings using EPSON TMNet WebConfig.

1. Connect the TM-DT series to the network and turn the power ON.

2. Start EPSON TMNet WebConfig from the shortcut on the desktop.

   EPSON TMNet WebConfig starts.

   If you are making settings from an external device, set the TM-DT series IP address in the address for the Web browser. The default IP address for TM-DT series is 192.168.192.168.

   http://[IP address of the TM-DT series]/webconfig/

3. EPSON TMNet WebConfig starts.

   Select (Settings)-[Web service settings]-[Server access]-[Status notification].

4. The "Status Notification" screen appears.

   Set the following items and click (Apply).

   For TM-DT Software Ver.3.0 or later

<table>
<thead>
<tr>
<th>Item</th>

<tr>
<td>Interval (sec)</td>
<td>Set the request interval. Request interval refers to the interval between the end of the previous communication and the start of the next communication.</td>
</tr>
</tbody>
</table>
**TM-T88VI Settings**

Configure the Status Notification settings using TM-T88VI Utility.

1. Starting the TM-T88VI Utility.

2. After TM-T88VI Utility starts, click (TM-Intelligent) - (Status Notification).

3. The Server Status Notification appears.

   Set the following items and click (Set).

<table>
<thead>
<tr>
<th><strong>Item</strong></th>
<th><strong>Description</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Status Notification</td>
<td>Specifies whether to enable or disable the status notification.</td>
</tr>
<tr>
<td>Notification Server URL</td>
<td>Specifies the Web server URL and the application path. Example: http://[IP address of Web server]/Test_print.php</td>
</tr>
<tr>
<td>ID</td>
<td>Enter the ID. This ID will be the user ID used for Digest authentication.</td>
</tr>
<tr>

</table>
**Execution of Sample Program**

1. Confirm that Status Notification of TM intelligent printer is set.

2. Open the sample program page from the Web browser.
   Example: [http://(IP address of the Web Server)/demo/indexStatus.html](http://(IP address of the Web Server)/demo/indexStatus.html)

3. The “resultPrint.log” is created from the message from the TM intelligent printer and the result is displayed on the screen.
### Status Type

The following types of ASB (AutoStatusBack) status can be obtained from the TM-I series.

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0x00000004</td>
<td>Status of the drawer kick number 3 connector pin = &quot;H&quot;</td>
</tr>
<tr>
<td></td>
<td>Offline due to a weak battery (supported model only)</td>
</tr>
<tr>
<td>0x00000008</td>
<td>Offline status</td>
</tr>
<tr>
<td>0x00000020</td>
<td>Cover is open</td>
</tr>
<tr>
<td>0x00000040</td>
<td>Paper feed switch is feeding paper</td>
</tr>
<tr>
<td>0x00000100</td>
<td>Waiting for online recovery</td>
</tr>
<tr>
<td>0x00000200</td>
<td>Paper feed switch is being pressed</td>
</tr>
<tr>
<td>0x00000400</td>
<td>Mechanical error occurred</td>
</tr>
<tr>
<td>0x00000800</td>
<td>Auto cutter error generated</td>
</tr>
<tr>
<td>0x00002000</td>
<td>Unrecoverable error generated</td>
</tr>
<tr>
<td>0x00004000</td>
<td>Auto recovery error generated</td>
</tr>
<tr>
<td>0x00020000</td>
<td>No paper in the roll paper near end detector</td>
</tr>
<tr>
<td>0x00080000</td>
<td>No paper in the roll paper end detector</td>
</tr>
<tr>
<td>0x01000000</td>
<td>Buzzer activated (supported model only)</td>
</tr>
<tr>
<td></td>
<td>Waiting for label to be removed (supported model only)</td>
</tr>
<tr>
<td>0x04000000</td>
<td>No paper in label peeling sensor (supported model only)</td>
</tr>
</tbody>
</table>
Refer to the programming below. (File name: Test_status.php)

```php
<?php
header('Content-Type: text/xml; charset=UTF-8');
# Open the file to save status.
$fhandle = @fopen("ResultStatus.log", "wt");

# Update the printer status.
if (isset($_POST['Status'])) {
    $status = $_POST['Status'];
}
$xml = simplexml_load_string($status);
foreach ($xml->printerstatus as $printerstatus) {
    $asb = hexdec($printerstatus['asbstatus']);
    $strmsg = "";
    if (($asb & 0x00000004) == 0x00000004) {
        $strmsg .= " Status of the drawer kick number 3 connector pin\n";
    }
    if (($asb & 0x00000008) == 0x00000008) {
        $strmsg .= " Offline status \n";
    }
    if (($asb & 0x00000020) == 0x00000020) {
        $strmsg .= " Cover is open \n";
    }
    if (($asb & 0x00000040) == 0x00000040) {
        $strmsg .= " During paper feeding by pressing paper feed switch \n";
    }
    if (($asb & 0x00000100) == 0x00000100) {
        $strmsg .= " Waiting for online recovery \n";
    }
    if (($asb & 0x00000200) == 0x00000200) {
        $strmsg .= " Paper feed switch is being pressed (ON) \n";
    }
    if (($asb & 0x00000400) == 0x00000400) {
        $strmsg .= " Mechanical error generated \n";
    }
    if (($asb & 0x00002000) == 0x00002000) {
        $strmsg .= " Unrecoverable error generated \n";
    }
    if (($asb & 0x00004000) == 0x00004000) {
        $strmsg .= " Auto recovery error generated \n";
    }
    if (($asb & 0x00020000) == 0x00020000) {
        $strmsg .= " No paper in the roll paper near end detector \n";
    }
}
```
if (($asb & 0x00080000) == 0x00080000)
{
    $strmsg .= "  No paper in the roll paper end detector \n";
}
if (($asb & 0x01000000) == 0x01000000)
{
    $strmsg .= "  Buzzer activated (supported model only) \n";
}
if (($asb & 0x01000000) == 0x01000000)
{
    $strmsg .= "  Waiting for label to be removed (supported model only) \n";
}
if (($asb & 0x04000000) == 0x04000000)
{
    $strmsg .= "  No paper in label peeling sensor (supported model only) \n";
}
$result = fprintf($fhandle, "Printer name = %s : Status ASB value is %s \n",  $printerstatus['devicename'], $asb);
$result = fprintf($fhandle, "%s\n", $strmsg);
if ($result) {
    # OK
} else {
    # N.G
}
fclose($fhandle);
Request and Response

Request

The format of request message is URL-encoded form data (application/x-www-form-urlencoded).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectionType</td>
<td>Status</td>
</tr>
<tr>
<td>ID</td>
<td>The ID set with WebConfig (p. 58)</td>
</tr>
<tr>
<td>ResponseFile</td>
<td>Status Information</td>
</tr>
</tbody>
</table>

POST /demo/Test_status.php HTTP/1.1
Host: 192.168.192.10
Content-Type: application/x-www-form-urlencoded
Content-Length: xxx

ConnectionType=SetStatus&ID=&Status=Status Information

The status information configuration is as follows:

```
<?xml version="1.0" encoding="utf-8"?
<statusmonitor Version="1.00">
  <printerstatus devicename="kitchen_printer" asbstatus = "0x00000001"/>
  <printerstatus devicename="kitchen_printer2" asbstatus = "0x00000001"/>
  <printerstatus devicename="local_printer" asbstatus = "0xF00003C"/>
</statusmonitor>
```

Battery Status

With TM-T88VI, a battery status notification is sent for the controlled mobile printer.

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0x30XX</td>
<td>The AC adapter is connected</td>
</tr>
<tr>
<td>0x31XX</td>
<td>The AC adapter is not connected</td>
</tr>
<tr>
<td>0xXX36</td>
<td>Battery amount 6</td>
</tr>
<tr>
<td>0xXX35</td>
<td>Battery amount 5</td>
</tr>
<tr>
<td>0xXX34</td>
<td>Battery amount 4</td>
</tr>
<tr>
<td>0xXX33</td>
<td>Battery amount 3</td>
</tr>
<tr>
<td>0xXX32</td>
<td>Battery amount 2</td>
</tr>
<tr>
<td>0xXX31</td>
<td>Battery amount 1 (Near end)</td>
</tr>
<tr>
<td>0xXX30</td>
<td>Battery amount 0 (Real end)</td>
</tr>
</tbody>
</table>

The status information configuration is as follows:

```
<printerstatus devicename="local_printer" asbstatus = "0xF000001C" battery = "0x0000"/>
```
## Server Access Error Notification

With TM-T88VI, a notification can be sent for errors that occur when the server is accessed.

<table>
<thead>
<tr>
<th>Code</th>

</tbody>
</table>

```xml
<?xml version="1.0" encoding="utf-8"?>
<statusmonitor Version="1.10">
<printerstatus devicename="local_printer" asbstatus = "0x0F00001C" battery = "0x0000"/>
<servicestatus servicename="%Function%" code="%Code%" severity="%Severity%" message="%Msg%" /></statusmonitor>```
Response

The format of response message is XML(text/xml).
To indicate that the server received the status notification, the Web server returns a response as follows:

```
HTTP/1.1 200 OK
Content-Type: text/xml; charset=utf-8
Content-Length: 0
```

Digest Access Authentication

Digest access authentication can be used for the status notification.
See "Digest Access Authentication" (p.55)
