# Technical Reference Guide

## TM-T88VI

### Product Overview
Describes features of the product.

### Setup
Describes setup and installation of the product and peripherals.

### Advanced Usage
Describes advanced usage methods for the product.

### Application Development Information
Describes how to control the printer and necessary information when you develop applications.

### Handling
Describes how to handle the product.

### Replacement of the TM-T88V
Describes precautions for replacement.

### Appendix
Describes general specifications and character code tables.
Cautions

• No part of this document may be reproduced, stored in a retrieval system, or transmitted in any form or by any means, electronic, mechanical, photocopying, recording, or otherwise, without the prior written permission of Seiko Epson Corporation.

• The contents of this document are subject to change without notice. Please contact us for the latest information.

• While every precaution has been taken in the preparation of this document, Seiko Epson Corporation assumes no responsibility for errors or omissions.

• Neither is any liability assumed for damages resulting from the use of the information contained herein.

• Neither Seiko Epson Corporation nor its affiliates shall be liable to the purchaser of this product or third parties for damages, losses, costs, or expenses incurred by the purchaser or third parties as a result of: accident, misuse, or abuse of this product or unauthorized modifications, repairs, or alterations to this product, or (excluding the U.S.) failure to strictly comply with Seiko Epson Corporation's operating and maintenance instructions.

• Seiko Epson Corporation shall not be liable against any damages or problems arising from the use of any options or any consumable products other than those designated as Original Epson Products or Epson Approved Products by Seiko Epson Corporation.

Trademarks

EPSON is a registered trademark of Seiko Epson Corporation.

Exceed Your Vision and ESC/POS are registered trademarks or trademarks of Seiko Epson Corporation.

Microsoft, Windows, and Windows Vista are registered trademarks of Microsoft Corporation in the United States and/or other countries.

Wi-Fi®, WPA™, and WPA2™ are either registered trademarks or trademarks of Wi-Fi Alliance®.

The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by Seiko Epson Corporation is under license.

IOS is a trademark or registered trademark of Cisco in the U.S. and other countries and is used under license.

Apple, Apple TV, Apple Watch, iPad, iPad Air, iPad Pro, iPhone, and Lightning are trademarks of Apple Inc., registered in the U.S. and other countries. tvOS is a trademark of Apple Inc.

iBeacon is a trademark of Apple Inc.

Android and Google Play are trademarks of Google, Inc.

All other trademarks are the property of their respective owners and used for identification purpose only.

ESC/POS® Command System

Epson ESC/POS is a proprietary POS printer command system that includes patented or patent-pending commands. ESC/POS is compatible with most Epson POS printers and displays.

ESC/POS is designed to reduce the processing load on the host computer in POS environments. It comprises a set of highly functional and efficient commands and also offers the flexibility to easily make future upgrades.
For Safety

Key to Symbols

The symbols in this manual are identified by their level of importance, as defined below. Read the following carefully before handling the product.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![WARNING]</td>
<td>You must follow warnings carefully to avoid serious bodily injury.</td>
</tr>
<tr>
<td>![CAUTION]</td>
<td>Provides information that must be observed to prevent damage to the equipment or loss of data.</td>
</tr>
<tr>
<td>![CAUTION]</td>
<td>• Possibility of sustaining physical injuries.</td>
</tr>
<tr>
<td>![CAUTION]</td>
<td>• Possibility of causing physical damage.</td>
</tr>
<tr>
<td>![CAUTION]</td>
<td>• Possibility of causing information loss.</td>
</tr>
<tr>
<td>![NOTE]</td>
<td>Provides important information and useful tips.</td>
</tr>
</tbody>
</table>

Warnings

In the following cases, immediately unplug the AC cable and contact your dealer or a Seiko Epson service center for advice. Continued use may lead to fire or electric shock.

- If the product emits smoke, a strange odor, or unusual noises.
- If water or other liquid spills into the product.
- If the product is too hot to touch or the case is deformed.

Note the following points to avoid accidents such as fire, electric shock, or burn.

- Do not use this product where flammable fumes from gasoline, benzine, thinner, or other flammable liquids may be in the air.
- Do not use aerosol sprayers containing flammable gas inside or around the product.
- Do not cover the product with cloth, or place the product in locations subject to high levels of humidity or dust.
- Do not allow foreign objects or flammable objects to fall into the equipment.
- Do not touch the inside of the product except where mentioned in the manual.
- Do not use the product with any power supply or voltage other than the ones specified.
- Do not connect cables in ways other than those mentioned in the manual.
- Never disassemble or modify the product.
- Do not use the power plug if there is dust or foreign matter attached.
- Do not bend, twist, pull with excessive force, or place heavy object on the power cable.
- Do not use the cables if they are damaged.
- Do not place multiple loads on the power outlet (wall outlet).
- Never insert or disconnect the power plug with wet hands.
Cautions

Note the following points to avoid injury or malfunction.

- Setup the product on a firm, stable, horizontal surface.
- Do not place heavy objects on top of the product. Never stand or lean on the product.
- Do not press your hands or fingers against the cutter when removing printed paper or loading/replacing roll paper.
- Do not put your hands between the cover and the body of the product when opening/closing the cover.
- Never attempt to repair the product yourself.
- Do not connect a telephone line to the drawer kick connector.

To ensure safety, unplug this product before leaving it unused for an extended period.
Caution Labels

The caution labels on the product indicate the following precautions.

⚠️ ⚠️ CAUTION:
Do not touch the thermal head and the frame on its side because it can be very hot after printing.

⚠️ CAUTION:
Touching the manual cutter may cause injury.

Restriction of Use

When this product is used for applications requiring high reliability/safety, such as transportation devices related to aviation, rail, marine, automotive, etc.; disaster prevention devices; various safety devices, etc.; or functional/precision devices, etc., you should use this product only after giving consideration to including failsafes and redundancies into your design to maintain safety and total system reliability. Because this product was not intended for use in applications requiring extremely high reliability/safety, such as aerospace equipment, main communication equipment, nuclear power control equipment, or medical equipment related to direct medical care, etc., please make your own judgment on this product’s suitability after a full evaluation.

Note about interference

- This product generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications.
- If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
  - Reorient or relocate the receiving antenna for the radio/TV.
  - Increase the separation between the equipment and the radio/TV.
  - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
  - Consult your dealer or an experienced radio/TV technician for help.
- Never disassemble or modify this product.
- Seiko Epson Corporation shall not be liable for interference to radio/TV resulting from changes or modifications to this product not expressly approved by Seiko Epson Corporation.

Open Source Software License

This product uses open source software in addition to Epson proprietary software.
For information of the open source software used in this product, see the following URL.
http://xxx.xxx.xxx.xxx/licenses.html
For “xxx.xxx.xxx.xxx” in the above URL, input your printer’s IP address.
# About this Manual

## Aim of the Manual

This manual provides developers/engineers with all the necessary information for design, development and installation of a POS system, and also design and development of a printer application.

## Manual Content

The manual is made up of the following sections:

<table>

Product Overview

This chapter describes features of the product.

Features

Printing
• High speed printing (350 mm/s maximum).
• Shifting from 80 mm width paper printing to 58 mm width paper printing is available.
• Multi-tone graphic printing.

Handling
• Easy drop-in paper loading

Software
• TM-Intelligent function is equipped.
  • Supports Server Direct Print that sends a request for print data from the product to the Web server at regular intervals.
  • Since print data can be saved in the spooler, applications can be released from processing print jobs regardless of the printer status.
  • When a network printer is registered, print forwarding process can be realized. Also, if the printer is not ready to print, you can print from another printer.
  • Equipped with Web server that supports the scripting language "PHP" and database "SQLite3".
• Command protocol is based on the ESC/POS Proprietary Command System.
• OPOS ADK, OPOS ADK for .NET, JavaPOS ADK, and Windows printer drivers are available.
• In addition to supporting several kinds of bar code printing, DS1 DataBar printing and two-dimensional symbol (PDF417, QR code, MaxiCode, Composite Symbology) printing are possible.
• A maintenance counter function is supported.
• Various utility software are available.
• A utility for iOS/Android™ (Epson TM Utility for iOS/Android) for making printer settings is also provided.

Environment
• Compliant with International ENERGY STAR Program.
• Paper saving function is available.

Functions
• NFC tag built into the printer unit for printing to a touched printer.
• Printing triggered by bar code scan by smart device camera.
• Supports printing using multiple interfaces.
• Enables HTTPS communication.

Others
• Various interface models are available.
• Optional Wireless LAN cable set, customer display, external buzzer, and interface boards are available.
• Optional wall hanging bracket is available to attach the printer to a wall.
• The TM-T88VI Software & Documents Disc containing drivers, utility, and manuals is available.
  * It may not be supplied depending on the model.
Product Configurations

Models

- Standard model: Ethernet interface, built-in USB interface, serial interface
- Parallel model: Ethernet interface, built-in USB interface, parallel interface
- USB Plus Power model: Ethernet interface, built-in USB interface, USB Plus Power Interface
- Wi-Fi® model: Ethernet interface, built-in USB interface, Wireless LAN interface
- Bluetooth® model: Ethernet interface, built-in USB interface, Bluetooth interface

Never use interface board with a buzzer function on this product. Otherwise, the printer or the interface board may be damaged. The name of interface boards with a buzzer function has “A” at the end. Example) UB-E**A, UB-R**A (*: alphanumeric character)

Accessories

Included

- Roll paper (for operation check)
- Power switch cover
- Connector cover
- Screw for attaching the Connector cover (x1)
- Bottom cover for the Connector cover
- Screw for attaching the Bottom cover for the Connector cover (x2)
- Roll paper guide
- Screw for attaching the roll paper guide (x1)
- TM-T88VI Software & Documents Disc (drivers, utilities, and documentation) *
- AC adapter*
- AC cable*
- Warranty certificate*
- Setup Guide

* May not be included depending on the model.

Options

- AC adapter
- AC cable
- Power supply box (Model: OT-BX88VI)
- Wall hanging bracket (Model: WH-10)
- Interface boards (UB series)*
- Optional external buzzer (Model: OT-BZ20)
- Wireless LAN cable set (Model: OT-WL02/OT-WL05)
- Customer display (Model: DM-D30, DM-D110)
* UB-E**A and UB-R**A cannot be used.
Part Names and Functions

1 NFC Tag
A mark is printed here to indicate the position of the NFC tag. To establish communication with an NFC device, bring the device close to this mark. For details on functions that use the NFC tag, refer to “Useful Functions for Smart Devices” on page 27.
- There is no data rewriting function.
- Use Epson ePOS SDK to build this function into your application.

2 Roll paper cover
Open this cover to install/replace the roll paper.

3 Manual cutter
Use this cutter when you cut the roll paper manually.

4 Cutter cover
Open this cover to unlock the autocutter blade when the roll paper cover does not open due to a paper jam.

5 Power switch
Turns the printer on or off.

6 Power switch cover
Install the power switch cover onto the printer to prevent inadvertent changing of the power switch, to prevent tampering, and to improve the appearance of the printer. To operate the power switch, insert an object with a pointed tip such as a ballpoint pen into the hole on the power switch cover.
For attaching the power switch cover, refer “Attaching the Power Switch Cover” on page 50.

7 Connector cover
Use the printer with this cover attached to protect cables.

8 Cover open button
Use this button to open the roll paper cover.

9 Feed button
Pressing this button once feeds roll paper for one line. Hold down this button to continue feeding roll paper.

10 Control Panel
For details on LED, see “Control Panel” on page 18.

11 Dip switch cover
Open the cover to view the dip switches for communication settings.
Control Panel

*Power LED*
- Lights when the power supply is on.
- Off when the power supply is off.
- Flashes during the network to start up, when waiting for power off, or updating firmware.

**CAUTION**

Do not turn on by using the power switch while waiting for the power to turn off (when the Power LED is flashing). Otherwise, it may not startup correctly.

*Error LED*
- Lights or flashes when an error occurs. (For information about the flashing patterns, see "Status and Errors" on page 21.)
- Lights after the power is turned on or after a reset (offline). Automatically goes out after a while to indicate that the printer is ready.
- Off when the printer is in standard mode (online).

*Paper LED*
- Lights when the roll paper is out.
- Flashes to urge user to operate the Feed button.
Connectors

All connectors are located on the lower rear of the printer.

- The installed interface varies depending on the model.
- Do not insert a Type-B USB connector into the LAN connector or the drawer kick connector. If it is inserted, the connector, printer, and the system may malfunction.
- If using the drawer kick connector and a serial/parallel connector simultaneously, we recommend using either of the cables below to prevent the cables from interfering with one another.
  * Flat-type drawer kick cable
  * Serial/parallel cable with a connector (from the tip to the screw) that is within 34 mm (1.34”).

**CAUTION**

</tr>
</tbody>
</table>
Online and Offline

**Online**
The printer is online and ready for normal printing unless there is a reason to go offline.

**Offline**
The printer automatically goes offline under the following conditions:
- While the printer power is turning on/off
- While a self-test is running
- While roll paper is fed using the Feed button
- When the printer stops printing due to a paper end (when the paper out detector detected the paper out)
- During an operation standby state
- When an error has occurred (See "Status and Errors" on page 21)
- While the roll paper cover is open
## Chapter 1 Product Overview

### Status and Errors

#### Error Status

There are three possible error types: automatically recoverable errors, recoverable errors, and unrecoverable errors.

#### Automatically Recoverable Errors

Printing is no longer possible when automatically recoverable errors occur. They can be recovered easily, as described below.

<table>
<thead>
<tr>
<th>Error</th>
<th>Error description</th>
<th>Error LED flash code</th>
<th>Recovery measure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Roll paper cover open error</td>
<td>The roll paper cover was opened during printing.</td>
<td>LED ON —— LED OFF</td>
<td>Recovers automatically when the roll paper cover is closed.</td>
</tr>
<tr>
<td>Print head temperature error</td>
<td>A high temperature outside the head drive operating range was detected.</td>
<td>LED ON —— LED OFF</td>
<td>Recovers automatically when the print head cools.</td>
</tr>
<tr>
<td>TM-Intelligent function error</td>
<td>Cannot connect to the server.</td>
<td>Error LED OFF Power LED ON —— LED OFF Approx. 160 ms —— Approx. 5120 ms</td>
<td>Recovers automatically when the printer settings are corrected. (see &quot;TM-Intelligent Function&quot; on page 84).</td>
</tr>
</tbody>
</table>

#### Recoverable Errors

Printing is no longer possible when recoverable errors occur. They can be recovered easily by turning the power on again or sending an error recovery command from the driver after eliminating the cause of the error.

<table>
<thead>
<tr>
<th>Error</th>
<th>Error description</th>
<th>Error LED flash code</th>
<th>Recovery measure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Autocutter error</td>
<td>Autocutter does not work correctly.</td>
<td>LED ON —— LED OFF</td>
<td>Remove the jammed paper or foreign matter in the printer, close the roll paper cover, send the error recovery command, or turn the power on to recover.</td>
</tr>
</tbody>
</table>

**CAUTION**

The error recovery command is valid only if a recoverable error (excluding automatically recoverable errors) occurs.
Unrecoverable Errors

Printing is no longer possible when unrecoverable errors occur. The printer must be repaired.

**CAUTION**

Turn off the power immediately when unrecoverable errors occur.

<table>

*: Changes depending on whether or not paper is detected.
**NV Memory**

The printer’s NV memory (Non-Volatile Memory) stores data even after the printer power is turned off. NV memory contains the following memory areas for the user:

- NV graphics memory
- User NV memory
- Memory switches
- R/E (Receipt Enhancement)
- Maintenance counter
- Web contents

CAUTION

NV memory can be rewritten about 100,000 times. As a guide, NV memory rewriting should be 10 times or less a day when you program applications.

---

**NV Graphics Memory**

Graphics, such as shop logos to be printed on receipts, can be stored. Even with a serial interface model whose communication speed is low, high speed graphics printing is possible.

Use the Setup Utilities to register graphics.

You can confirm the registered graphics in the NV graphics information print mode.

NOTE

- For information about how to use the NV graphics information print mode, see "NV Graphics Information Print Mode" on page 70.

---

**User NV Memory**

You can store and read text data for multiple purposes, such as for storing a note including customizing or maintenance information of the printer.

---

**Memory Switches**

With the memory switches, which are software switches for the printer, you can configure various settings of the printer. For information about the memory switch, see "Software Settings" on page 59.

---

**R/E (Receipt Enhancement)**

Graphics, such as shop logos to be printed on top or bottom of receipts can be registered.

Use the Setup Utilities to register graphics.
**Maintenance Counter**

With this function, printer information, such as the number of lines printed, the number of autocuts, and printer operation time after the printer starts working, is automatically stored in NV memory.

**NOTE**

You can also check the head running length and number of times of autocutting with the self-test (see “Self-test Mode” on page 70).

**Web contents**

The region for Web servers.
Simple Setup for Wireless LAN

This printer comes with a mode (SimpleAP) that allows printers to connect with a smart device or a computer without requiring a wireless access point. This allows you to easily setup a wireless LAN for the printer by using a printer settings tool (Epson TM Utility for iOS/Android or EpsonNet Config) even without a network environment such as access points.

SimpleAP mode is enabled by default when shipping from the factory. When SimpleAP mode is enabled and the printer is turned on, the following information is printed automatically.

Although operations are performed in SimpleAP mode during the initial startup, operations switch to standard mode (infrastructure mode) when changing settings in Epson TM-T88VI Utility for Windows or EpsonNet Config. After switching, operations continue in standard mode. If you want to make settings in SimpleAP mode again, initialize the communication settings (see "Resetting the Interface Settings" on page 83).

* You can also set as standard mode (Adhoc mode)
Useful Functions for Smart Devices

You can easily connect this product to the network by using the NFC tag built-in to the printer or the QR code printed on the status sheet.

**NFC Tag**

Bring a smart device that supports NFC close to the NFC tag to acquire the printer information (information for specifying the device).
Specify the target printer using the acquired information to connect to the network.

**QR Code**

Capture the QR code printed on the status sheet with the camera on your smart device to acquire the printer information (information for specifying the device).
Specify the target printer using the acquired information to connect to the network.

**NOTE**

- Programming using Epson ePOS SDK is required to use these functions. These functions are created by combining NFC touch and QR code capturing operations and the target printer specifications using Printer Easy Select API.
  See the "Epson ePOS SDK for Android/iOS User’s Manual" and the Epson ePOS SDK sample program for more details. The sample program also contains a sample implementation method for reading an NFC tag and capturing a QR code.
- You can try a demo of these functions by using Epson TM Utility for iOS/Android.

**Printing Using Multiple Interfaces**

In printers with multiple interfaces, you can use all interfaces without any limitations on which interface is to be used. You can use this function to temporarily connect a smart device to a nearby printer and print.

The printer provides each interface with an independent receive buffer and switches the active interface depending on the priority, while handling data in each receive buffer.

You can set one interface for the main connection. Data received from the main connection interface is handled with the highest priority.

By default, the interface that receives the first data transfer is set as the main connection interface; however, you can select the main connection interface in advance.

In the status where all receive buffers are empty for more than the set time (1 second by default), interface switching is enabled. The interface that receives the data in this status becomes active.

<table>
<thead>
<tr>
<th>CAUTION</th>
<th>You cannot use wired and wireless LANs at the same time. When a LAN cable is connected, wireless LAN is disabled.</th>
</tr>
</thead>
</table>

| NOTE | You can select the main connection interface and set the time to enable interface switching from the software settings. For details on software settings, see “Software Settings” on page 59. |
This chapter describes setup and installation of the product and peripherals.

**Flow of Setup**

This chapter consists of the following sections along with the setup flow of the product and peripherals.

1. Installing the Printer (page 30)
2. Adjusting the Paper Roll Near-End Sensor (page 31)
3. Connecting the AC adapter (page 32)
4. Connecting the Printer to the Host (page 33)
5. Connecting the Cash Drawer (page 41)
6. Setting the Built-in Buzzer (for Model with a Built-in Buzzer) (page 43)
7. Connecting the Optional External Buzzer (page 44)
8. Attaching the Connector Cover (page 46)
9. Arranging the Cables (page 48)
10. Attaching the Power Switch Cover (page 50)
11. Changing the Paper Width (page 51)
12. RTC Settings (page 52)
Installing the Printer

You can install this printer horizontally. With an optional hanging bracket (WH-10), you can also attach the printer to a wall.

**Important Notes on Horizontal Installation**

- The printer must be installed horizontally on a flat surface (not tilted).
- Do not place the printer in dusty locations.
- Do not catch cables or place foreign matter under the printer.

**Important Notes on Wall Hanging**

You need to perform the following tasks to install the printer on a wall. For more details, see the installation manual for the optional wall hanging bracket (WH-10).

- Installing the roll-paper stoppers
- Changing the location of the roll paper near-end sensor
- Attaching the connector cover
- Attaching the wall hanging bracket (WH-10)

For the other notes, see the installation manual for the optional wall hanging bracket (WH-10).

**CAUTION**

- Be sure to attach the connector cover when you install the printer on a wall using the wall hanging bracket.
- When installing on a wall using a wall mounting bracket, the status of the wireless signal for the wireless LAN unit may decline. In this situation, use an extension cable.
Adjusting the Paper Roll Near-End Sensor

Below are two situations where a roll paper NE sensor adjustment is required.

- To adjust the detection position to suit the diameter of the roll paper core used.
- To adjust the detection position of remaining amount of paper.

Follow the steps below to adjust the roll paper near-end detector.

1. **Open the roll paper cover, and remove the roll paper.**

2. **Loosen the adjustment screw fastening the sensor, and align the upper edge of the positioning plate with the adjustment position.**

<table>
<thead>
<tr>
<th>Adjustment position</th>
<th>Remaining amount of paper (outer diameter: mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Upper</td>
<td>Approx. 27 (1.06&quot;)</td>
</tr>
<tr>
<td>Lower (Default setting)</td>
<td>Approx. 23 (0.97&quot;)</td>
</tr>
</tbody>
</table>

3. **Tighten the adjustment screw.**

4. **After adjustment, make sure that the detection lever operates smoothly.**

   - Since roll paper cores vary slightly in shape, depending on paper roll design and manufacturing tolerances, it is impossible to detect the remaining paper exactly.
   - Use roll paper with a core inner diameter of 12 mm (0.47") and outer diameter of 18 mm (0.71") so that the NE sensor can detect the remaining paper as accurately as possible.
Connecting the AC adapter

Use the Epson PS-180 or an equivalent product as the AC adapter.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
</table>
| • Never insert the AC cable plug into a socket that does not meet the input voltage of the AC adapter. Doing so may result in damage to the printer.  
• Should a fault ever occur, immediately turn off the power to the printer and unplug the AC cable from the socket. |

Connecting the AC adapter

1. Make sure the printer is turned off.
2. Connect the AC cable to the AC adapter.

![AC adapter and AC cable diagram]

3. Connect the DC cable of the AC adapter to the power supply connector (stamped 24V).

NOTE The optional power supply box (OT-BX88VI) is available. You can store the power supply unit in the box attached to the printer.
Connecting the Printer to the Host

**USB Interface**

When using USB cable to connect with host device, connect the USB cable to the printer, and after starting the host device, turn the printer on.

*CAUTION*  
Do not place any weight or stress on the cable when using. Doing so could damage the cable and connectors.

**Ethernet Interface**

Use ethernet cable to connect the printer to network via a hub.

Use Epson TM-T88VI Utility for Windows or EpsonNet Config to set network.

For details on EpsonNet Config, refer to EpsonNet Config User’s Guide.

*CAUTION*  
- When LAN cables are installed outdoors, make sure they are connected through devices that have surge protection. Otherwise, the devices can be damaged by lightning.
- Never attempt to connect the drawer kick cable or a standard telephone line cable to the LAN connector.

*NOTE*  
As same with Conventional models, you can use EpsonNet Config (Web version) in the same way.  
User name/password: epson
Wireless LAN Interface

You can connect using a wired cable (LAN/USB), or connect using SimpleAP mode, and setup a wireless LAN using a network configuration tool. When setting up multiple printers, you can connect using a wired cable (LAN/USB) and setup a wireless LAN using the Epson Deployment Tool.

Using Epson TM Utility for iOS/Android, you can easily connect the printer to the network from an iOS or Android devices.

### Setting up Using a SimpleAP Connection from a Windows Computer

#### Necessary Items

Prepare the following items.

- Computer for setting: Windows 10/8/7/Vista
- Computer equipped with a wireless LAN function
- Utility for setting: Epson TM-T88VI Utility for Windows or EpsonNet Config

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>When using wireless LAN, make sure you disconnect the LAN cable. If a LAN cable is connected, wireless LAN is disabled.</td>
</tr>
<tr>
<td>When you set up the access point at the same time, set the access point in advance and check that it operates correctly.</td>
</tr>
<tr>
<td>Examine the radio wave situation in the surrounding area before use.</td>
</tr>
<tr>
<td>Avoid using the same channel that is used in the neighboring shops where Wireless LAN is used.</td>
</tr>
<tr>
<td>Wireless LANs with a frequency band of 2.4 GHz interfere with Bluetooth communication. When using Bluetooth and Wi-Fi at the same time, we recommend using 5 GHz.</td>
</tr>
<tr>
<td>When using the printer in environments where kitchen microwaves and other devices that may interfere radio waves are installed, observe the following points.</td>
</tr>
<tr>
<td>Keep the printer away from the devices, such as kitchen microwaves, that may cause radio wave interference.</td>
</tr>
<tr>
<td>Use channels that are away from the frequency bands that may cause radio wave interference.</td>
</tr>
<tr>
<td>Place shields between the printer and the devices that may cause radio wave interference.</td>
</tr>
<tr>
<td>Select either 2.4 GHz or 5 GHz, whichever is free from radio wave interference.</td>
</tr>
<tr>
<td>In auto channel setting for the access point, do not select a channel in which the devices may cause radio wave interference.</td>
</tr>
<tr>
<td>In the infrastructure mode, W53 and W56 channels are not available to connect to a stealth SSID access point.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>For SimpleAP mode, see &quot;Simple Setup for Wireless LAN&quot; on page 26.</td>
</tr>
</tbody>
</table>
Follow the steps below to connect the printer.

1. **Turn on the printer.**
   After starting the printer, check that the "SimpleAP Start" is printed. If it is not printed, you need to enable SimpleAP mode in interface settings mode.

2. **Activate Windows Wireless Network Connection and select [EPSON_Printer] as the connection device on the screen that appears.**
   If the window to enter a pass phrase appears, enter "12345678".
   Default settings on printer are the following values.

<table>
<thead>
<tr>
<th>Network mode</th>
<th>SimpleAP mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>SSID</td>
<td>EPSON_Printer</td>
</tr>
<tr>
<td>Pass phrase</td>
<td>12345678</td>
</tr>
<tr>
<td>IP Address</td>
<td>192.168.192.168</td>
</tr>
</tbody>
</table>

3. When connecting to the printer is complete, setup the Wireless LAN using the network setup tool, Epson TM-T88VI Utility for Windows or EpsonNet Config.
   For details about EpsonNet Config, see EpsonNet Config User's Manual.

4. When setting the wireless LAN is complete, remove the wired cable (LAN/USB) and restart the printer.

**Setting up Using a USB Connection from a Windows Computer**

**Necessary Items**

Prepare the following items.

- Computer for setting: Windows 10/8/7/Vista
- Utility for setting: TM-T88VI Utility for Windows
- USB cable

Follow the steps below to connect the printer.

1. **Connect the printer to a PC via the USB cable.**

2. **Turn on the host computer.**

3. **Turn on the printer.**

4. **Start up the TM-T88VI Utility for Windows.**
5 Select the printer, and then press the [OK] button. 
   If the printer is not displayed, press the "Add Port" button, and then add the printer connected by USB.

6 Perform network I/F as well as TCP/IP settings. 
   For details on the settings, see the TM-T88VI Utility User's Manual.

7 When you have finished making settings, disconnect the USB cable, turn off the printer, and then turn it back on.

   CAUTION To start wireless LAN communication, be sure to disconnect the USB cable, turn off the printer, and then turn it back on.

Setting up from a Smart Device

Necessary Items
Prepare the following items.
• Device for setting: iOS or Android device
• Utility for setting: Epson TM Utility for iOS/Android

Running Epson TM Utility for iOS/Android

1 Run the Epson TM Utility for iOS/Android.

2 Set from “Wi-Fi Setup Wizard” in the menu.

Setup and Operation Workflow
1. Select the network you want to connect to.
2. Enter the passkey.
3. Perform a test print.

Bluetooth Interface
Use a tool, such as a built-in Bluetooth connection tool of your device to establish the connection with the printer. If your device is a Windows computer, use EPSON TM Bluetooth® Connector, which is a utility to easily pair a terminal and the printer. If your terminal is an iOS or Android terminal, use Epson TM Utility for iOS/Android to easily pair your terminal and the printer.
Chapter 2 Setup

Setting up from a Windows Computer

Follow the procedure below and make the settings.

1. **Have a Bluetooth wireless technology compatible computer ready.**
   Make sure you have installed TM Bluetooth® Connector.

2. **Turn on the printer.**

3. **Start TM Bluetooth® Connector.**

4. **Select [Search all printers around this computer], and then click [Search].**

   ![Epson TM Bluetooth Connector](image)

   **NOTE**
   - For detailed information about EPSON TM Bluetooth® Connector, see the TM Bluetooth® Connector User’s Manual.
   - The device name and passkey are editable with the Setup Utilities.

   If the printer has not detected after clicking the Search button, check the manufacturer of the Bluetooth software.
   1. Open the Control Panel.
   2. In the search box on the Control Panel, enter “Bluetooth”, and then click Change Bluetooth settings.
   3. In the Bluetooth Settings dialog box, click the Hardware tab, and then search for the Microsoft Bluetooth Enumerator. If it is not found, the Bluetooth software cannot detect the Epson Bluetooth printer, and you may not be able to connect to the computer.
5 Select the printer to be paired (Not been paired yet), and then click [Connect].

6 If the window to enter a passkey appears, enter a passkey and click [OK].

7 Select the port to be used from the pull-down list, and then click [OK].

<table>
<thead>
<tr>
<th>Printing method</th>
<th>Port name</th>
</tr>
</thead>
<tbody>
<tr>
<td>APD print queue</td>
<td>ESDPRTxxx (TM-T88VI: Queue name)</td>
</tr>
<tr>
<td>UPOS</td>
<td>ESDPRTxxx (UPOS for TM-T88VI)</td>
</tr>
<tr>
<td>ESC/POS command</td>
<td>Displayed virtual COM port (e.g. COM4)</td>
</tr>
</tbody>
</table>

8 The “Connection complete” window appears. Click [Test Printing] to check operation.
9 Click [Back to Main screen] to return to the main window.

10 Click the “x” button of TM Bluetooth® Connector to exit.

### Setting up from a Smart Device

**Necessary Items**

Prepare the following items.

- Device for setting: iOS or Android device
- Utility for setting: Epson TM Utility for iOS/Android

**Running Epson TM Utility for iOS/Android**

1 Run the Epson TM Utility for iOS/Android.

2 Set from “Bluetooth Setup Wizard” in the menu.

**Setup and Operation Work flow**

1. Select the printer you want to connect to.
2. Enter the passkey.
3. Perform a test print.

---

**NOTE**

- If “Error” is displayed when you click the [Search] on the TM Bluetooth® Connector, check whether:
  - The Bluetooth adapter is installed to the computer.
  - Bluetooth is ON in the Windows settings.
  - If the device is not displayed on the TM Bluetooth® Connector or the TM Bluetooth® Connector Status shows “ ☹” after pairing. Check whether:
    - The printer is not turned on. Turn on the printer.
    - The printer is 10 m or further away from the computer.
    - Confirm that there is no other wireless device, such as a microwave oven and cordless telephone, that can interfere with the Bluetooth printer.
    - If the printer and the computer are placed in different rooms separated by a wall, move the printer and/or the computer in the same room.
    - The printer may not be detected when the search time is short. Try search again with longer search time.
    - While a computer and printer are communicating, the printer cannot be detected by other computers. Confirm that the printer to be detected is not communicating with any computer.
Serial Interface

When connecting to the host computer through a serial interface (RS-232), connect a serial cable to the printer, start the host computer, and then turn on the printer.

**NOTE**
- When using connectors equipped with screws, tighten the screws on both sides to secure the connectors firmly.
- When using interface cables equipped with a ground line, attach the ground line to the screw hole marked “FG” on the printer.

Parallel Interface

When connecting to the host computer using a parallel interface, connect the parallel cable to the printer, start the host computer, and then turn on the printer.

**NOTE**
- When using interface cables equipped with a ground line, attach the ground line to the screw hole marked “FG” on the printer.

USB Plus Power Interface

When using a USB Plus Power cable to connect with the host device, connect the flat connector of the USB Plus Power cable to the printer, and the square connector to the device. After starting the host device, turn the printer on.

**CAUTION**
- When using USB Plus Power Interface, be careful of the following points.
  - Do not connect an AC adapter and USB (Type-B) simultaneously.
  - Do not remove or insert the USB Plus Power cable while the printer is still on.
Connecting the Cash Drawer

Specifications of drawers differ depending on makers or models. When you use a drawer other than specified, make sure its specification meets the following conditions.
Otherwise, devices may be damaged.

- The load, such as a drawer kick solenoid, must be connected between pins 4 and 2 or pins 4 and 5 of the drawer kick connector.
- When the drawer open/close signal is used, a switch must be provided between drawer kick connector pins 3 and 6.
- The resistance of the load, such as a drawer kick solenoid, must be 24 ohms or more or the input current must be 1A or less.
- Be sure to use the 24V power output on drawer kick connector pin 4 for driving the equipment.

Drawer Connection Diagram

[Diagram showing the connection between the printer and the cash drawer, including the connection points and labels for FG, +24V, Drawer kick connector, Drawer kick solenoid, Drawer open/close switch, and User side [Drawer kick side].]
Connecting the drawer kick cable

- Use a shield cable for the drawer kick cable.
- When using cash drawer, make sure to use the power supply for printer (connector pins 4).
- Do not insert a telephone line into the drawer kick connector.

Doing so may damage the telephone line or printer.

Connect the drawer kick cable to the drawer kick connector by pressing firmly until the connector clicks into place.
Setting the Built-in Buzzer
(for Model with a Built-in Buzzer)

For specifications with a built-in buzzer, a pulse output is sent to drawer kick connector pin 5 to beep the buzzer.

When using a cash drawer, connect a cash drawer operated by pin 2.

If you have to use a cash drawer operated by pin 5, change the DIP switch settings for the buzzer circuit. For details, see "Setting the DIP Switches" - "Setting Procedure" on page 53.

DIP Switch for Buzzer Circuit

<table>
<thead>
<tr>
<th>DIP switch</th>
<th>Specified connector pin</th>
<th>ON</th>
<th>OFF</th>
<th>Default setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Drawer kick connector pin 2</td>
<td>Buzzer beeps.</td>
<td>Buzzer does not beep.</td>
<td>ON</td>
</tr>
<tr>
<td>2</td>
<td>Drawer kick connector pin 5</td>
<td>Buzzer beeps.</td>
<td>Buzzer does not beep.</td>
<td>OFF</td>
</tr>
</tbody>
</table>

**CAUTION**

Do not set the buzzer to beep for pin numbers used for drawer operations. The buzzer and the cash drawer cannot be operated by one pulse signal.
Connecting the Optional External Buzzer

When the optional external buzzer (model: OT-BZ20) is connected to the drawer kick connector of the printer, you can set the printer so that it beeps when you send commands, when an error occurs, when executed autocutting, and when detected paper end. Settings for sound patterns and frequency depending on the occasions the buzzer beeps are also available.

You need to set with the memory switch (customized values) for buzzer enable/disable setting, sound pattern setting, and frequency setting. For information about the memory switch (customized values), see "Software Settings" on page 59.

**CAUTION**
- Be sure to turn off the printer before you connect/disconnect the optional external buzzer.
- Do not connect both the optional external buzzer and the cash drawer to the printer at the same time by using a branched connector.

Attachment Position

The optional external buzzer is recommended to be installed in the following positions.

**CAUTION**
- Do not install the optional external buzzer at the roll paper exit.
- To prevent liquid from entering inside, it is recommended to install the optional external buzzer so that the volume adjustment knob is positioned sideways or downward.
Connecting the Optional Wireless LAN Unit

The optional Wireless LAN cable set (OT-WL02/OT-WL05) enables you to use the product with a Wi-Fi connection.
For more information, refer to Technical Reference Guide of the Wireless LAN cable set.

**CAUTION**
- Be sure to turn off the printer when connecting the Wireless LAN unit.
- Depending on the installation conditions of the printer and the routing for cables connected to it, the status of the radio waves for the Wireless LAN unit may decline. If this does happen, use an extension cable.

**NOTE**
- This option may be included with this product, depends on the models.
- The shape of the Wireless LAN unit varies depending on the model.

Connecting the Optional Customer Display

You can connect the customer display (DM-D30/DM-D110/DM-D210) to this product, using USB connection.
For more information, refer to the Technical Reference Guide of the customer display.

**CAUTION**
Be sure to turn off the printer when connecting the customer display.
Attaching the Connector Cover

When using the connector cover, attach the connector cover. Follow the steps below to attach the connector cover to protect cables.

1. Turn over the printer.

2. Position the two hooks on both sides of the connector cover so that they hook the printer case.

3. Push the connector cover down to click onto the printer case.

4. Pass each cable through the cable exits at the bottom of the connector cover.

5. Turn over the printer and make sure the cables are not pinched.
- You can use the enclosed screw to fix the connector cover.

- To remove the connector cover, turn the printer over, remove the screw, and push the connector cover down while pushing both sides of the connector cover inward to detach the hooks from the printer case.
Arranging the Cables

Route the cables when using the connector cover.
Pass the cables through cable exits in the connector cover. The connector cover has cable exits on the back and both sides.
You can also route the cables out the front by passing them through the notch in the printer bottom.

If you want to pass the USB cable through the cable exit on the back, fit the cable under the hook on the printer to prevent the cable from coming off and to prevent too much force being applied to the connector section.

NOTE
You can also attach bottom cover to hide connectors. Make sure the cable does not get caught when installing.
After the cable arrangement, turn over the printer, and make sure the cables are not pinched.
**Attaching the Power Switch Cover**

By attaching the power switch cover supplied, you can prevent accidental operations of the power switch. You can press the power switch by inserting a sharp-pointed object in the holes on the power switch cover. To detach the cover, use a sharp-pointed object.

**WARNING**

If an accident occurs with the power switch cover attached, unplug the power cord immediately. Continued use may cause fire or shock.
Changing the Paper Width

You can change the paper width from 80 to 58 mm by installing the included 58-mm width roll paper guides. Follow the steps below to change the paper width.

1 Open the roll paper cover.

2 Install the roll paper guide so that the protrusion on the roll paper holder is aligned with the hole on the printer.

CAUTION Turn off the printer when installing the roll paper guides.

NOTE You can use the enclosed screw to fix the roll paper guide.

CAUTION After using the printer for an extended period at 58 mm, do not return to 80 mm. Parts of the print head that do not normally touch the paper may be damaged by the platen roller, and the autocutter may wear out.

3 Set the paper width in software setting mode. For information about the software setting mode, see "Software Settings" on page 59.
**RTC Settings**

The time for the RTC (Real Time Clock) may be initialized when starting up for the first time. If the time is initialized, make settings using the Setup Utilities.

Advanced Usage

*Setting the DIP Switches*

On this printer, you can make various settings with DIP switches. The DIP switches are already set for the current interfaces. Change the setting if necessary. Functions of the DIP switches differ depending on the interface.

**Setting Procedure**

Follow the steps below to change the DIP switch settings.

**CAUTION**

- Before you remove the DIP switch cover, turn off the printer and disconnect all cables. Otherwise, a short-circuit may cause the printer to malfunction.
- If you open the DIP switch cover, be sure to close the cover and tighten the screw after adjusting the DIP switch. Using this product with the cover open may cause fire or electric shock.

- DIP switch settings are enabled only when the power is turned on or the printer is reset via the interface. If the settings are changed after that, the functions will not change.
- Do not change switches that are fixed to ON or OFF. Otherwise, the printer may not operate normally.

1. Make sure the printer is turned off.

2. Unscrew the screw to remove the DIP switch cover from the base of the printer.
3 Set the DIP switches, using the tip of a tool, such as a small screwdriver.

4 Replace the DIP switch cover, and screw it in place.

bps: bits per second

* The default value of transmission speed set with software settings is 38400 bps. (See "Software Settings" on page 59.)

**NOTE**

Depending on print conditions, such as print duty, print head temperature, and data transmission speed, print speed is automatically adjusted, which can cause white lines due to intermittent print (the motor sometimes stops). To avoid this, set the transmission speed higher or keep the print speed constant by setting it lower.

<tr>
<td>Print density (dark)</td>
<td>OFF</td>
<td>ON</td>
</tr>
</tbody>
</table>

CAUTION
- If the print density is set to “Medium” or “Dark” level, print speed may be reduced.
- The print density can be set with DIP switches (2-3/2-4) or the software settings. (See “Software Settings” on page 59.)

Selecting the BUSY Status

With DIP switch 2-1, you can select conditions for invoking a BUSY state as either of the following:
- When the receive buffer is full
- When the receive buffer is full or the printer is offline

CAUTION
In either case above, the printer enters the BUSY state after power is turned on (including resetting with the interface) and when a self-test is being run.

Software Settings

With the memory switches and customized values, which are software settings for this printer, you can set the various functions.

For an outline of the functions, see the following section. Use the Epson TM-T88VI Utility for Windows, Epson TM Utility for iOS/Android, or Software Setting Mode to set the memory switches.

The software setting mode is the mode set using the printer’s panel. For details on panel operations, see “Software Setting Mode” on page 72.

*1: The setting item may not be available depending on the area.

*2: Enabled only under the following conditions.
Epson TM Utility for iOS/Android Ver.3.6.0 or later
Firmware Ver.40.10 ESC/POS or later
TM-T88VI Utility for Windows Ver.1.30 or later
## Functions

### Automatic line feed
- Normally disabled (default setting)
- Normally enabled

> **CAUTION** This is only enabled when using a serial interface. When using another interface, make settings by using the DIP switches.

### USB power saving function
- Disabled
- Enabled (default setting)

> **CAUTION** Enabled when anything except for UB-U06/UB-R04/UB-IU01 is installed to the UIB.

> **NOTE** The USB power-saving function is valid only when the USB interface communication condition is set to the vendor-defined class and the system configuration is set so that the USB driver can support the USB power-saving function.

### Paper sensors to output paper end signal
- Roll paper out detector (default settings)
- Disabled

> **CAUTION** When using a parallel interface, make settings by using the DIP switches.

### Error signal output
- Enabled (default setting)
- Disabled

> **CAUTION** When using a parallel interface, make settings by using the DIP switches.

### Automatic paper reduction

#### Extra upper space reduction
- Disabled (default setting)
- Enabled
Extra lower space reduction
• Disabled (default setting)
• Enabled

Line space reduction rate
• Not reduced (default setting)
• Reduce 25%
• Reduce 50%
• Reduce 75%

Line feed reduction rate
• Not reduced (default setting)
• Reduce 25%
• Reduce 50%
• Reduce 75%

Amount of reduction in character height
• Not reduced (default setting)
• Reduce 25%
• Reduce 50%
• Reduce 75%

Amount of reduction in barcode height
• Not reduced (default setting)
• Reduce 25%
• Reduce 50%
• Reduce 75%

Amount of top margin by backfeed
Selectable from levels 15 mm ~ 2mm (0.5 mm interval)
Default setting: level 15 mm

CAUTION
• Remove all ejected paper before printing with backfeed.
• Disable the automatic top logo setting when enabling backfeed.
• You cannot use backfeed in the following cases even if you have enabled backfeed.
  ✔ Immediately after auto cutting while the cover is closed.
  ✔ While the self-test is in progress.
• If setting a top margin of 5 mm (0.2") or less, confirm that no errors occur in your environment of usage. Usage in a hot and humid environment or usage of paper that curls easily may increase the risk of paper jams.
• When implementing a backfeed, rubbing smears may occur due to slack in the paper. We recommend using thermal paper with high rub resistance.
Auto paper feed&cut at cover close
- Cuts
- Does not cut (default setting)

Buzzer function

**NOTE**
- For information about how to connect the optional external buzzer, see "Connecting the Optional External Buzzer" on page 44.
- When the optional external buzzer is enabled, a cash drawer cannot be used. Be sure to disable it when you use a cash drawer.

Enables/disables
- Disabled (default setting)
- Enabled

Buzzer frequency (Error)
- Does not sound
- Sounds 1 time
- Sounds continuously (default setting)

Sound pattern (Autocut)
Selectable from Patterns A to E
Default setting: Pattern A

Buzzer frequency (Autocut)
- Does not sound
- Sounds 1 time (default setting)

Sound pattern (Pulse 1)
Selectable from Patterns A to E
Default setting: Pattern A

Buzzer frequency (Pulse 1)
- Does not sound
- Sounds 1 time (default setting)

Sound pattern (Pulse 2)
Selectable from Patterns A to E
Default setting: Pattern B

Buzzer frequency (Pulse 2)
- Does not sound
- Sounds 1 time (default setting)
Command execution during offline
- Enabled
- Disabled (default settings)

Character code table defaults
Selectable from 43 pages including user defined page
Initial setting: PC437: USA, Standard Europe

International character defaults
Selectable from 18 sets
Initial setting: USA

Font A auto replacement
- Does not replace (default setting)
- Font B

Font B auto replacement
- Does not replace (default setting)
- Font A

Print density
Selectable from 70% to 130% (5% increment)
Default setting: 100%
Depending on the paper type, it is recommended to set the print density as shown in the table below for the best print quality.

<table>
<thead>
<tr>
<th>Original Paper type</th>
<th>Density</th>
<th>Print speed</th>
</tr>
</thead>
<tbody>
<tr>
<td>AF50KS-E</td>
<td>85%</td>
<td>13 (300 mm/sec)</td>
</tr>
<tr>
<td>KT55FA</td>
<td>100%</td>
<td>14 (350 mm/sec)</td>
</tr>
<tr>
<td>KT48FA</td>
<td>100%</td>
<td>13 (300 mm/sec)</td>
</tr>
<tr>
<td>F5041(55), F5041(48), P30521, P30523, P31523, P35524</td>
<td>105%</td>
<td>13 (300 mm/sec)</td>
</tr>
</tbody>
</table>

**NOTE**
- When the print density level is increased, print speed may be reduced. When printing at a density of 115% or more and below a room temperature of 15°C, the speed drops to less than 200 mm/sec.
- When setting the print speed to level 14, use customized values to set the print density.
Print speed
Selectable from levels 1 to 14 (Slow ~ Fast)
Default setting: level 13

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>
| • Print speed is restricted by the settings for the number of head electrification divisions. The maximum printing speed of 350 mm/s is only possible when 1 electrification division is selected.  
• The maximum printing speed when using 58 mm is 300 mm/s. |

<table>

Print density during multi-tone printing
Selectable from 70% to 130% (5% increment)
Default setting: 100%

Power supply output
Selectable from levels 1 to 3 low power load
Default setting: level 3

Paper width
• 80mm (default setting)  
• 58mm

Interface selection
• Fixed to UIB  
• Fixed to built-in USB  
• Fixed to Ethernet (Wi-Fi)  
• UIB/Bluetooth  
• Built-in USB auto switch  
• The entire interface is enabled (default setting)
Interface switch wait time
Select from 1 to 10 seconds (in intervals of 1 second)
1 second (default setting)

Main interface selection
- Auto (interface that receives data first) (default setting)
- UIB
- USB
- UIB/Bluetooth
- Ethernet/Wi-Fi
- No main connection I/F

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>- When using this printer with multiple interfaces, make sure the interface that is always connected to be set as the main connection.</td>

Startup display
- Enabled
- Disabled (default setting)

Auto re-connect iOS
- Enabled (default settings)
- Disabled

Baud rate
- 2400 bps
- 4800 bps
- 9600 bps
- 19200 bps
- 38400 bps (default setting)
- 57600 bps
- 115200 bps

USB class
- Printer class (default setting)
- Vendor-defined class
USB IEEE1284 device ID
- Do not output IEEE1284 Device ID
- Output IEEE1284 Device ID (default setting)

Print Data Parsing setting
- Disable (default)
- Enable

The setting item may not be available depending on the region.

Bluetooth communication interval during power saving mode
- Level 1 (Standard) (Initial setting)
- Level 2 (Short)

By changing the setting to "Level 2 (Short)," you can shorten the time until printing begins or the time until information is shown on the customer display connected to the printer. However, because the communication frequency increases, the power consumption of the printer and the host also increases. Also, depending on the host, this setting may not be enabled, and the host-specified communication interval may be used.
**Setting/Checking Modes**

As well as print mode, the following modes are also provided for making various printer settings and checking items.

- Self-test mode
- NV graphics information print mode
- Receipt Enhancement information print mode
- Software settings mode
- Restore default values mode
- Interface setup mode
- TM-Intelligent settings information print mode
- Hexadecimal dumping mode

The self-test mode or hexadecimal dumping mode is selected depending on the operation performed when the power is turned on.

NV graphic information print mode, Receipt Enhancement information print mode, Software settings mode, and Restore default settings mode are selected depending on the Feed button operation performed during a self-test.

---

**Self-test**

1. Close the roll paper cover, and turn on the printer while pressing the Feed button.
2. Briefly press the Feed button. Hold down the Feed button.

**Continuing the self-test**

- Press the Feed button once briefly and then hold it down.
- Press the Feed button twice briefly and then hold it down.
- Press the Feed button three times briefly and then hold it down.
- Press the Feed button four times briefly and then hold it down.
- Press the Feed button five times briefly and then hold it down.
- Press the Feed button six times briefly and then hold it down.
- Press the Feed button seven times briefly and then hold it down.

**Mode selection guidance**

- Press the Feed button eight times briefly and then hold it down.

**NV Graphics Information**

Open the roll paper cover, and turn on the printer while pressing the Feed button, and then close the roll paper cover.

**Hexadecimal dumping**
In 1 and 2, the following guidances are printed, the Paper LED flashes, and instructs the user’s operations.

1. Continuing self-test guidance

Select Modes by pressing Feed Button.
Continue SELF-TEST: Less than 1 second
Mode Selection : 1 second or more

2. Mode selection guidance

Mode Selection

Modes
0: Exit and Reboot Printer
1: NV Graphics Information
2: Receipt Enhancement Information
3: Customize Value Settings
4: Restore Default Values
5: Interface Setup
6: TM-Intelligent Information
7: Peripheral Device Information
8 or more: None

Select Modes by executing following procedure.
step 1. Press the Feed button less than 1 second as many times as the selected mode number.
step 2. Press Feed button for 1 second or more.
Self-test Mode

You can check the following items using the self-test.

- Product name
- Firmware version
- Product serial number
- Interface type
- Resident fonts
- Maintenance counter information (head running length, number of times of autocutting)
- Setting condition of the DIP switch

Follow the steps below.

1. **Close the roll paper cover.**

2. **While pressing the Feed button, turn on the printer. (Hold down the Feed button until printing starts.)**
   
   After printing the current print status, a Continuing self-test guidance is printed, and the Power LED flashes.

3. **Briefly press the Feed button (less than one second) to continue the self-test.**
   
   The printer prints a rolling pattern on the roll paper, using the built-in character set. After “*** completed ***” is printed, the printer initializes and switches to standard mode.

NV Graphics Information Print Mode

Prints the following NV graphic information registered to the printer.

- Capacity of the NV graphics
- Used capacity of the NV graphics
- Unused capacity of the NV graphics
- Number of NV graphics that are registered
- Key code, number of dots in X direction, number of dots in Y direction to be defined.
- NV graphics data

**NOTE**

For details on NV graphics, see "NV Graphics Memory" on page 24.
Follow the steps below.

1. **After running a self-test, hold down the Feed button for at least one second, and then select the Mode selection.**
   The Mode selection guidance is printed, and the Paper LED flashes.

2. **After briefly (less than one second) pressing the Feed button once, hold it down for at least one second, to print the NV graphics information.**
   After information printing, the Mode selection guidance is printed again.

3. **To finish, turn off the power, or select “Exit and Reboot Printer”.”**

### Receipt Enhancement Information Print Mode

You can check the following items using the R/E information mode:
- Automatic top logo setting
- Automatic bottom logo setting
- Extended settings for automatic top/bottom logo

Follow the steps below.

1. **After running a self-test, hold down the Feed button for at least one second, and then select the Mode selection.**
   The Mode selection guidance is printed, and the Power LED flashes.

2. **After briefly (less than one second) pressing the Feed button twice, hold it down for at least one second, to print the R/E information.**
   After information printing, the Mode selection guidance is printed again.

3. **To finish, turn off the power, or select "Exit and Reboot Printer".”**
Software Setting Mode

Set the printer’s memory switches and customized values.

- Print density
- Auto reduction of amount of paper to use
- Enabling/disabling paper autocutting at cover close
- Paper width setting
- Auto replacement of font
- Print speed
- Command execution (offline)
- Specification for the top margin by backfeed
- Optional external buzzer control
- Interface setting
  - Communication conditions using a serial interface
  - Communication conditions using a USB interface
  - Interface switch wait time
  - Main interface selection
- Enabling/disabling Display when interface is activating
- Power supply capacity
- Automatic line feed
- Select paper sensor(s) to output paper-end signals
- ERROR signal when an error occurs

Follow the steps below.

1. **After running a self-test, hold down the Feed button for at least one second to enter the Mode selection.**
   The Mode selection guidance is printed, and the Paper LED flashes.

2. **Briefly press the Feed button three times (less than one second), hold it down for at least one second to enter the Software settings mode (Customized value setting).**
   The Software setting mode guidance is printed, and the Paper LED flashes.

For details on the memory switches and customized values, see "Software Settings" on page 59.
After briefly pressing the Feed button (less than one second) for the number of times shown in the print result, hold down the button for more than one second to select the setting items.

The setting selected as the setting item, the current settings and default settings are printed. Depending on the setting item, you may need to continue selecting the setting item before the settings are printed.

For details on setting items, see "Software Settings" on page 59.

---

CAUTION

When set to a value other than those in the software setting mode, the current settings are not printed.

---

Select a setting by briefly pressing the Feed button (less than one second) for the number of times applicable to the setting, and then hold down the button for more than one second to confirm your selection.

After saving the settings, the Software setting mode guidance is printed, and the Paper LED flashes.

To close Software setting mode, turn off the printer, or select “Exit” to return to Mode selection guidance, and then select “Exit and Reboot Printer”.

- To select 0 as the item number, hold down the Feed button until printing starts.
- If the button is pressed a number of times that is not displayed by the Setup guidance, the operation is invalid and the same guidance is printed.
**Restore Default Values Mode**

In Restore default values mode, following values saved on NV Memory will be set back to default settings. When any error occurs, you can use to specify the reason.

Follow the steps below.

1. **After running a self-test, hold down the Feed button for at least one second to enter the Mode selection.**
   The Mode selection guidance is printed, and the Paper LED flashes.

2. **Briefly press the Feed button four times (less than one second), hold it down for at least one second to enter the Restore Default Values.**
   The guidance is printed.
3 When only restoring the default settings:
Briefly press the Feed button once (less than one second), hold it down for at least one second. (Hold down the Feed button until the message of restore completion is printed.)

When restoring default settings and deleting user defined data:
Briefly press the Feed button twice (less than one second), and then hold it down for at least one second. (Hold down the Feed button until the restoration complete message is printed.)

4 To finish, turn off the power.
**Interface Setup Mode**

Use this mode to setup the interface and other settings.

Follow the steps below.

1. **After running a self-test, hold down the Feed button for at least one second to enter the Mode selection.**
   The Mode selection guidance is printed, and the Paper LED flashes.

2. **Briefly press the Feed button five times (less than one second), hold it down for at least one second to enter the Interface Setup mode.**
   The guidance is printed.

3. **After briefly pressing the Feed button (less than one second) for the number of times shown in the print result, hold down the button for more than one second to select the setting items.**

**Initialize**

Select [Wi-Fi & Ethernet Setup] or [Bluetooth Setup] and select [Initialize] to initialize the network setting parameter. The printer is reset and restarted.

**SimpleAP mode (Wi-Fi model)**

In Wi-Fi model, select [Wi-Fi & Ethernet Setup] and select [SimpleAP] to start in SimpleAP mode (the same as the factory default setting). The printer is reset and restarted, and it begins printing the "SimpleAP Start" information.

Select this to use Quick connection for Wi-Fi model.

**NOTE**

For information on the Quick connection function, see "Simple Setup for Wireless LAN" on page 26.

**Auto re-connect to iOS device (Bluetooth model)**

In Bluetooth model, select [Bluetooth Setup] and then select [Auto Re-Connect iOS], you can select whether to enable or disable auto reconnection to iOS devices.

**NOTE**

- For details on the auto re-connect function, see "Auto Reconnect Feature" on page 126.
- You can change the settings with Setup Utilities.
Bluetooth Security Settings (Bluetooth model)

For Bluetooth models, select [Bluetooth Setup], and then select [Security], and you can change the Bluetooth security settings.

**CAUTION**
When the security settings are changed, the link key (pairing information) is removed. If the printer is already paired with a terminal, unpair them and then pair again.

**NOTE**
You can change the settings with Setup Utilities.

<table>
<thead>
<tr>
<th>Security</th>
<th>Pairing Mode</th>
<th>Pairing Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low</td>
<td>Pairing is always possible</td>
<td>Just Works</td>

<td>Just Works</td>
</tr>
<tr>
<td>High</td>
<td>Pairing is possible for one minute after printing the status sheet</td>
<td>Numeric Comparison/Passkey Entry</td>
</tr>
</tbody>
</table>

Pairing method when the security is set to Middle/High (from the printer)

When the security is set to Middle/High and the printer is ready to be paired, perform the following procedure.

1. Load paper in the printer, and then turn it on.

   **CAUTION**
   - Make sure no errors have occurred and that the printer is not off-line.
   - You cannot pair the printer while the network is starting up immediately after the power is turned on.

2. Open the roll paper cover, hold down the Feed button for at least one second, and then close the roll paper cover.

3. A status sheet is printed, and the power LED flashes a pattern indicating that pairing is now possible.

   **NOTE**
   - Pairing is possible for one minute after printing the status sheet.
   - You can enable pairing also by printing the status sheet by pressing the status sheet button.

Pairing method when the security is set to High (from the host)

When the security is set to High and the printer is ready to be paired, perform the following procedure.

1. Search for the printer on the Bluetooth settings screen on the host device.

2. Select the printer you want to pair with.

   The printer prints the Passkey.
3 Check that the printed Passkey and the Passkey displayed on the host device match, and then select “Pairing” on the host device.

**TM-Intelligent Settings Information Print Mode**

This function allows you to print TM-Intelligent setting information currently registered in the printer.

Follow the steps below.

1 **After running a self-test, hold down the Feed button for at least one second to enter the Mode selection.**
   The Mode selection guidance is printed, and the Paper LED flashes.

2 **Briefly press the Feed button six times (less than one second), hold it down for at least one second to print the TM-Intelligent setting information.**
   After information printing, the Mode selection guidance is printed again.

3 **To finish, turn off the power, or select “Exit and Reboot Printer”.

**Peripheral Device Information Print Mode**

This function allows you to print information for the device currently connected to the printer.

- Customer display information
- Wi-Fi adapter information
- Bluetooth adapter information

Follow the steps below.

1 **After running a self-test, hold down the Feed button for at least one second to enter the Mode selection.**
   The Mode selection guidance is printed, and the Paper LED flashes.

2 **Briefly press the Feed button seven times (less than one second), hold it down for at least one second to print the Peripheral Device Information.**
   After information printing, the Mode selection guidance is printed again.

3 **To finish, turn off the power, or select “Exit and Reboot Printer”**.
Hexadecimal Dumping Mode

In hexadecimal dumping mode, data from the host device is printed in hexadecimal numbers and characters. By comparing the print outs and the program, you can check whether or not data is being sent to the printer correctly.

- When there are no characters that correspond to the print data, “." is printed.
- If you press the Feed button when there is less than one line of print data, one line is printed.
- During hexadecimal dumping mode, applications that check the printer status may not operate correctly. The printer only returns the status for the “Real-time transmission status” command.

Follow the steps below.

1. Open the roll paper cover.

2. While pressing the Feed button, turn on the printer. (Hold down the Feed button until the Error LED turns on.)

3. Close the roll paper cover.
   From this point, all data received by the printer is printed in the corresponding hexadecimal numbers and ASCII characters.

Example of printing in hexadecimal dumping mode:

```
Hexadecimal Dump
To terminate hexadecimal dump,
press FEED button three times.

1B 21 00 1B 26 02 40 40 18 69 . ! . & . @ . i
1B 25 01 1B 63 34 00 1B 30 31 . % . c 4 . 0 1
41 42 43 44 45 46 47 48 49 4A A B C D E F G H I J
*** completed ***
```

4. To close hexadecimal dumping mode, turn off the printer after printing is complete, or press the Feed button for three times.
Printing a Status Sheet

Follow the steps below to check the interface settings.

When the power LED is flashing, wait until it remains lit to start printing.

Using the Status Sheet Button

Only the content for the Ethernet and Wi-Fi interface are printed.

1 Check that the printer is turned on.
   Make sure the roll paper cover is closed.

2 If there is a connector cover, remove the cover.
   See "Attaching the Connector Cover" on page 46 for details on removing the connector cover.

3 Hold down the status sheet button for at least three seconds.
   The status sheet is printed. After printing, the printer returns to the standard mode.

Using the Feed button

Content for the Ethernet, Wi-Fi, and Bluetooth interface are printed.

1 Check that the printer is on.

2 Open the roll paper cover.

3 Hold down the Feed button for at least one second.

   For firmware version 40.02 or earlier, press and hold for 3 seconds or longer.

4 Close the roll paper cover.
   The status sheet is printed. After printing, the printer returns to the standard mode.

Resetting the Interface Settings

Follow the steps below to reset the interface settings.

1. Turn off the printer and close the roll paper cover.
2. If the connector cover is attached, remove the cover.
   See "Attaching the Connector Cover" on page 46 for details on removing the connector cover.
3. Hold down the status sheet button while turning on the printer.
   A message is printed indicating that resetting is being performed, and the printer restarts.

   Hold down the status sheet button until the initialization execution message is printed.

   • You can return the interface settings to their defaults from the Interface Setup mode. See "Interface Setup Mode" on page 76 for details on the Interface Setup mode.
   • Only network settings are returned to their defaults.
**TM-Intelligent Function**

This product supports the TM-Intelligent function and provides the following functions.

- Server direct print
- Web server
- Spooler and Print Forwarding

You can also download a dedicated manual and sample programs from our homepage.

**Server direct print**

The server direct function allows this product to acquire print data from a Web server and then print.

By including print data in a response to request from this product, the Web server application can print to this product or a TM printer on the network.

The features are as follows.

- You can acquire print data from three different URLs.
- Print data is available in ePOS-Print XML format.
- You can use this product to print to TM printers on a network.

Regarding details on server direct printing, see the Server Direct Printing User’s Manual.

**Web server**

This product is equipped with a Web server, and you can enable this function by saving Web content (HTML files, CSS files, JavaScript, PHP files, and image data) to the printer.

Web server supports the scripting language "PHP" and database "SQLite3". You can enable the following by using content created in PHP.

- Creating a dynamic Web page
- Handling user data by file or database operations

Web content registered to this product can be automatically acquired and updated from a specific URL.

Use the Setup Utilities to register Web content and make settings for updating.

**Specifications of the file to be registered**

- Contents such as HTML files, CSS files, PHP files, JavaScript files, certificate files, and image data.
- Zip the files to be registered all together. The zip file name is arbitrary.

**NOTE**

- Use one-byte alphanumeric characters (ASCII characters) for a zip file name and sub-folder name.
- The maximum size of the files before being zipped is 30 MB. Otherwise, registering fails.
Cautions for the files to be registered

- Locate the file as shown below.

  <Example for sample program>

  ```
  ePOS-Device_UM_E_Sample.zip  : Zip file
  index.html
  css
  img
  js
  sample
  L.*.html
  ssltrustedcerts  : Server authentication certificate
  example.pem
  sslservercerts  : SSL authentication certificate
  ServerCrt.crt  : Certificate file
  ServerKey.key  : Private key file
  ChainCrt.crt  : Certificate chain file
  ```

- To access the Web contents registered in this product from an input terminal or other device, the reference URL is different depending on the folder configuration of the zip file as shown below.

  A: http://[This product's IP address]/index.html
  
  B: http://[This product's IP address]/webpage/index.php

Spooler and Print Forwarding

The spooler function allows you to try to print again when a print error occurs.
If printing to this product fails, the Print Forwarding function allows you to print to other TM printers on the network.

This function is only available with the following control methods or functions.

- Epson ePOS SDK for JavaScript
- ePOS-Print XML
- Server direct print
- OFSC-Print
Application Development Information

This chapter describes how to control the printer and gives information useful for printer application development.

Controlling the Printer

The printer supports the following command systems:

- ESC/POS
- ePOS-Print XML

Users can control the printer by using the aforementioned command, or the following development kits or drivers.

- EPSON Advanced Printer Driver (APD)
- OPOS ADK
- OPOS ADK for .NET
- JavaPOS ADK
- Mac Printer Driver
- Epson TM/BA Series Thermal Printer Driver
- Epson ePOS SDK

ePOS-Print XML

ePOS-Print XML is the Epson original control command system for POS printers defined in XML. With ePOS-Print XML commands, you can print in environments where http communication is available and from OS applications. For detailed information about ePOS-Print XML, see the ePOS-Print XML User’s Manual.

ESC/POS

ESC/POS is the Epson original printer command system for POS printers and customer display. With ESC/POS commands, you can directly control all the printer functions, but detailed knowledge of printer specifications or combination of commands is required, compared to using drivers and applications.

For detailed information about ESC/POS commands, see the ESC/POS Command Reference that can be accessed from the following URL.

Controlling the Cash Drawer

A pulse output is sent to drawer kick connector pin 2 or pin 5, and you can open the drawer.
You can also check the open/close status of the drawer by checking the signal level of the drawer kick connector pin 3.
These controls are executed by a driver or by commands.

ESC/POS Commands
Prepare the output command for the specified pulse and the status transmission command.
For details, see the ESC/POS Command Reference.

For Windows Printer Drivers (APD)
You can set so that the drawer opens at the start/end of printing or start/end of a page. For details, see the manual for drivers.
For details on control, see the manual for Status API of the driver.

OPOS (OCX Driver)
Register a cash drawer using the SetupPOS Utility, and control using the OpenDrawer method or the DirectIO function.
For details, see the "EPSON OPOS ADK MANUAL APPLICATION DEVELOPMENT GUIDE Cash Drawer" and the "UnifiedPOS Specification".

OPOS for .NET
Register a cash drawer using the SetupPOS Utility, and control using the OpenDrawer method or the DirectIO function.
For details, see the "EPSON OPOS ADK for .NET MANUAL Application Development Guide Cash Drawer (EPSON Standard)" and the "UnifiedPOS Specification".

Epson ePOS SDK
The output command for the drawer kick pulse and the status transmission command are provided in each SDK library. For details, see the user’s manuals provided with each SDK.

NOTE
- Whether or not pin 2 or pin 5 operates the drawer kick connector depends on the connected cash drawer.
- You can acquire documents regarding the UnifiedPOS from the following link.
  https://nrf.com/resources/retail-technology-standards/unifiedpos
Controlling the Built-in Buzzer

For specifications with a built-in buzzer, a pulse output is sent to the operating pin for the drawer kick connector, and the built-in buzzer beeps.

You cannot change the volume or the sound emitted, but you can change the buzzing time by changing the signal pulse width.

This is controlled by a driver or by commands.

**ESC/POS Commands**

The output command for the specified pulse is used.

For details, see the ESC/POS Command Reference.

**For Windows Printer Drivers (APD)**

You can set so that the buzzer beeps at the start/end of printing or start/end of a page. For details, see the manual for drivers.

For API, the API for opening the drawer is used. For details, see the manual for Status API of the driver.

**OPOS (OCX Driver)**

Register a POS printer using the SetupPOS Utility and control using the DirectIO function.

For details, see the "EPSON OPOS ADK MANUAL APPLICATION DEVELOPMENT GUIDE POSPrinter (TM Series)".

**OPOS for .NET**

Register a POS printer using the SetupPOS Utility and control using the DirectIO function.

For details, see the "EPSON OPOS ADK for .NET MANUAL Application Development Guide POSPrinter (TM-T88VI)".

**Epson ePOS SDK**

Use the output command for the drawer kick pulse provided in each SDK library. For details, see the user’s manuals provided with each SDK.

**NOTE**

When using a cash drawer operated by pin 5 with a built-in buzzer, you need to change the DIP switch settings for the buzzer circuit so that the buzzer beeps from a pulse signal for pin 2. For details, see "Setting the Built-in Buzzer (for Model with a Built-in Buzzer)" on page 43.
Controlling the Optional External Buzzer

You can set the optional external buzzer to buzz when an error occurs and when an automatic cut off occurs. The buzzer can be buzzed using a driver or a command. You can also set the timing and the beep pattern for the buzzer.

ESC/POS Command
Use the buzzer control command or the output command for the specified pulse. For details, see the ESC/POS Command Reference.

For Windows Printer Drivers (APD)
You can set so that the buzzer beeps at the start/end of printing or start/end of a page. For details, see the manual for drivers. For API, use the DirectIO function or the API for opening the drawer. For details, see the manual for Status API of the drivers.

OPOS (OCX Driver)
Register a POS printer using the SetupPOS Utility and control using the DirectIO function. For details, see the "EPSON OPOS ADK MANUAL APPLICATION DEVELOPMENT GUIDE POSPrinter (TM Series)".

OPOS for .NET
Register a POS printer using the SetupPOS Utility and control using the DirectIO function. For details, see the "EPSON OPOS ADK for .NET MANUAL Application Development Guide POSPrinter (TM-T88VI)".

Epson ePOS SDK
The command for the buzzer function is provided in each SDK library. For details, see the user’s manuals provided with each SDK.

For details on setting the optional external buzzer, see "Connecting the Optional External Buzzer" on page 44.
**Software**

The following software is provided for application development.

### Development Kits

<table>
<thead>
<tr>
<th>Software</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>EPSON OPOS ADK</td>
<td>This OCX driver can control POS peripherals using OLE technology.*1 Because controlling POS peripherals with original commands is not required on the application side, efficient system development is possible.</td>
</tr>
<tr>
<td>EPSON OPOS ADK for .NET</td>
<td>The OPOS ADK for .NET is a POS industry standard printer driver compatible with Microsoft POS for .NET. It allows you to develop applications that are compatible with the UPOS (Unified POS) specification. When developing applications, use a separate development environment such as Microsoft Visual Studio .NET.</td>
</tr>
<tr>
<td>EPSON JavaPOS ADK (Windows/Linux)</td>
<td>JavaPOS is the standard specification which defines an architecture and device interface (API) to access various POS devices from a Java based system. Using JavaPOS standard API allows control with Java based applications of functions inherent to each device. A flexible design with Java language and JavaPOS enables many different types of computer systems, such as stand alone or network configuration, to use a same application. You can use JavaPOS to build applications and drivers independently of platforms. This allows flexible configurations using thin clients to meet the system requirements.</td>
</tr>
<tr>
<td>Epson ePOS SDK</td>
<td>This is a developer kit to control applications, native applications for smart devices, and printers. This includes libraries, manuals, and sample programs.</td>
</tr>
<tr>
<td>for Android</td>
<td></td>
</tr>
<tr>
<td>for iOS</td>
<td></td>
</tr>
<tr>
<td>for Universal Windows apps</td>
<td></td>
</tr>
<tr>
<td>for JavaScript</td>
<td></td>
</tr>
</tbody>
</table>

*1: OLE technology developed by Microsoft divides software into part blocks. The OPOS driver is presupposed to be used with a development environment, such as Visual Basic, unlike ordinary Windows printer drivers. It is not a driver to be used for printing from commercial applications. You can acquire documents regarding the UnifiedPOS from the following link. [https://nrf.com/resources/retail-technology-standards/unifiedpos](https://nrf.com/resources/retail-technology-standards/unifiedpos)
### Drivers

<table>
<thead>
<tr>
<th>Software</th>
<th>Description</th>
<th>Operating environment</th>
</tr>
</thead>
<tbody>
<tr>
<td>EPSON Advanced Printer Driver (APD)</td>
<td>In addition to ordinary Windows printer driver functions, this driver has controls specific to POS. The Status API (Epson original DLL) that monitors printer status and sends ESC/POS commands is also attached to this driver.</td>
<td>Windows</td>
</tr>
<tr>
<td>EPSON TM Virtual Port Driver</td>
<td>This is a serial/parallel-USB/LAN conversion driver to make an Epson TM/BA/EU printer connected via USB or LAN accessible from a POS application through a virtual serial or parallel port. It allows you to directly control devices connected via USB or LAN with ESC/POS commands without making changes in the POS application that controls devices connected via a serial or parallel interface.</td>
<td>Windows</td>
</tr>
<tr>
<td>Mac Printer Driver</td>
<td>Mac printer driver allows you to control the printer using Common UNIX Printing System (CUPS) on Mac OS X. This is a full raster printer driver. It is able to print images, text, and vector graphics etc., that an application displays. With this driver many printer controls are possible, such as paper cut timing control, cash drawer control, printing speed control, blank line skip, and upside-down printing. It also provides API and dialogues for print setting, sample applications, and logo setting utility.</td>
<td>Mac OS X</td>
</tr>
<tr>
<td>Epson TM/BA Series Thermal Printer Driver</td>
<td>This driver allows you to control the printer using Common UNIX Printing System (CUPS) on GNU/Linux. This is a full raster printer driver. It is able to print images, text, and vector graphics etc., that an application displays. With this driver many printer control are possible, such as paper cut timing control, cash drawer control, printing speed control, blank line skip, and upside-down printing.</td>
<td>GNU/Linux</td>
</tr>

</table>

### Utilities

<table>
<thead>
<tr>
<th>Software</th>
<th>Description</th>
<th>Operating environment</th>
</tr>
</thead>
</table>
| TM-T88VI Utility | A utility for checking and changing various printer settings. Use this utility to:  
- Check the current settings  
- Test operation  
- Store logos  
- Set paper saving  
- Set printing control  
- Set communication interfaces  
- Set the network  
- Set the intelligent function  
- Save/restore settings | Windows |
### Chapter 4 Application Development Information

#### Epson TM Utility
A utility that can be downloaded from App Store or Google Play. Use this to perform wireless connection setup and change settings on the printer from iOS and Android devices. This utility also comes with the following sample printing functions:
- Sample receipt printing
- Customized receipt printing
- Printer status display
- Quick pairing by NFC/QR code
- Easy print by NFC/QR code
- Firmware update*

*: Supported by Ver. 3.2.0 or later.

#### EpsonNet Config
A network setting tool for Epson network products.

#### EPSON TM Bluetooth® Connector
Use to pair a Bluetooth printer and associate the generated Bluetooth port with that used by the driver and applications.

#### Epson Deployment Tool
Use to make network and printer settings simultaneously. Allows you to make settings efficiently at the time of introducing TM printers for the first time, or when configuring multiple TM printers at the same time.

#### Epson Monitoring Tool
Use to check a list of status for the Epson printers connected to the network. You can also update certificates for multiple printers used for WPA2-Enterprise in a batch.

#### TM-T88VI Printer Model Setting Utility
This tool allows you to change the model name for the TM-T88VI to TM-T88V or TM-T88IV.

#### BmpToRaster
You can convert BMP image files to multi tone or black and white print command data.

#### EPSON TMUSB Identifier Utility
This tool allows you to change the USB identification code (USB Serial No.). Setting an identification code before replacement makes it easy to perform replacement if a malfunction occurs.

#### TM-T88VI Firmware Updater
This tool allows you to update the firmware for the TM-T88VI.

---

### Download

You can obtain software and manuals from one of the following URLs.
For customers in North America, go to the following web site and follow the on-screen instructions.
http://www.epson.com/support/

For customers in other countries, go to the following web site:
http://download.epson-biz.com/?service=pos
Application Development and Distribution for iOS

If registering an application that uses Bluetooth in the App Store, Epson must submit an application to Apple in advance. Please apply for each application you want to register in the App Store from the URL below:

https://c4b.epson-biz.com/ais/E/
Handling

This chapter describes basic handling of the printer.

**Installing and Replacing Roll Paper**

1. **Open the roll paper cover.**
   
   ![Image of roll paper cover open]

   When the roll paper cover cannot be opened, see "Removing Jammed Paper" on page 98.

2. **Remove the used roll paper core, if any.**
3 Install the roll paper in the correct direction.

When roll paper is loaded, feed the paper for at least 20 mm.

CAUTION

4 Pull out some roll paper, and close the roll paper cover.
Tear off the paper.
Removing Jammed Paper

Follow the steps below if the roll paper is jammed.

1. **Turn off the printer.**
2. **Open the roll paper cover.**

---

**CAUTION**

Do not touch the thermal head and its surroundings. After printing, the thermal head and its surroundings can be very hot.

**CAUTION**

When a paper jam occurs, never pull out the paper forcibly.
3 Remove the jammed paper.

4 Close the covers.
If Roll Paper Cover does not Open

If a foreign substance has entered the autocutter or the roll paper jams, the autocutter blade cannot return to the correct position and it locks in place. In this situation, the roll paper cover does not open even if you pull the cover open lever.

Follow the steps below to return the autocutter blade to its normal position.

1 Turn off the printer.

2 Slide the cutter cover toward the front to open it.

3 Turn the knob until you see a triangle in the opening. This returns the cutter blade to the normal position. There is a label near the cutter to assist you.

4 Close the cutter cover.

5 Open the roll paper cover and remove the jammed paper.
Cleaning the Printer

Cleaning the Printer Case

Be sure to turn off the printer, and wipe the dirt off the printer case with a dry cloth or a damp cloth. Be sure to unplug the AC cable while cleaning.

**CAUTION**

Never clean the product with alcohol, benzine, thinner, or other such solvents. Doing so may damage or break the parts made of plastic and rubber.

Cleaning the Thermal Head/Platen Roller

Epson recommends cleaning the thermal head periodically (generally every 3 months) to maintain receipt print quality.

Depending on the roll paper used, paper dust may stick to the platen roller and cause an irregular paper feed. To remove the paper dust, clean the platen roller with a cotton swab moistened with water. Turn on the printer power only after the water has completely dried.

Turn off the printer, open the roll paper cover, and clean the thermal elements of the thermal head with a cotton swab moistened with an alcohol solvent (ethanol or IPA).

**CAUTION**

- After printing, the thermal head can be very hot. Do not touch it and let it cool before you clean it.
- Do not damage the thermal head by touching it with your fingers or any hard object.
Preparing for Transport

Follow the steps below to transport the printer.

1. Turn off the printer.
2. Remove the power supply connector.
3. Remove the roll paper.
4. Pack the printer upright.
Replacement of the TM-T88V

The TM-T88VI is designed so that it can smoothly replace the TM-T88V. This chapter describes precautions for the replacement.

Compatibility

Printing

The printing and character specifications are the same as those of the TM-T88V. Without special configurations, the TM-T88VI prints the same results as the TM-T88V prints.

Print Density

The print density of the TM-T88VI can be set with DIP switches (2-3/2-4) as can the TM-T88V. Set the density the same as for the TM-T88V to print in the same print density.

Number of Head Energizing Parts

For the TM-T88VI, the default setting of the number of head energizing parts is “One-part energizing.” It does not usually need to be changed.

<table>
<thead>
<tr>
<th>Number of head energizing part</th>
<th>TM-T88VI</th>
<th>TM-T88V</th>

</tr>
</tbody>
</table>

Printable Area (for 80 mm Width Paper)

The printable area (left/right margins, print start position from the autocutting position, print start position from the manual cutting position) of the TM-T88VI is the same as that of the TM-T88V.

Cutting Method

The TM-T88VI uses the partial cutting method (cutting with one point in left edge left uncut) as does the TM-T88V.

Manual Paper Feed

As same with the TM-T88V, manual paper feed is not possible with the TM-T88VI.
Receive Buffer

You can set the receive buffer of the TM-T88VI to 4KB or 45 bytes with DIP switch 1-2 as with the TM-T88V. The buffer full condition and buffer full release condition of the TM-T88VI are the same as those of the TM-T88V.

Memory Capacity

The sizes of the download buffer and NV graphics data of the TM-T88VI are the same as those of the TM-T88V.

Electrical Characteristics

The operating voltage of the TM-T88VI is DC24 ± 7%, the same as the TM-T88V. The current consumption differs, depending on the print duty. When you set the print speed to 350 mm/s, the amount of electricity consumed increases.

DIP Switches

The functional assignments of DIP switches for the TM-T88VI differ from the TM-T88V. See "Setting the DIP Switches" on page 53 for more details.

Printer Status

The TM-T88VI goes to the same status under the same conditions as the TM-T88V. You can replace the TM-T88V with the TM-T88VI without modifying applications.

Logo Registration

The TM-T88VI can register logos in the NV memory (NVRAM) with the Setup Utilities.

Driver Compatibility

You can operate the TM-T88VI with a driver for the TM-T88V.

USB Low Power Consumption Mode

With the TM-T88VI, you can enable the USB low power consumption mode in the software setting mode.
Maintenance Counter

The TM-T88VI has a maintenance counter just as the TM-T88V has.

Buzzer

TM-T88VI is available with a built-in buzzer or without the buzzer. Even if you purchase the one without the buzzer, you can attach an optional external buzzer. You can beep the buzzer with the pulse signal using a command.

Power Supply Box

The optional power supply box (OT-BX88VI) is available to be attached under the TM-T88VI to hold the power unit.
Overall Dimensions

You can place the TM-T88VI in the same location as the TM-T88V, since its overall dimensions and weight are the same as those of the TM-T88V. With the wall hanging bracket (WH-10), you can attach the TM-T88VI to a wall just as you can with the TM-T88V.

<table>

<td>W:145 × D:195 × H:148 mm Approximately 1.6kg (W:5.71” × D:7.68” × H:5.83” Approximately 3.53 lb)</td>
<td>W:145 × D:195 × H:148 mm Approximately 1.6kg (W:5.71” × D:7.68” × H:5.83” Approximately 3.53 lb)</td>
</tr>
</tbody>
</table>
Additional Functions and Functional Improvements

**Print Speed**

The default printing speed for the TM-T88VI may vary depending on the specification.

<table>
<thead>
<tr>
<th></th>
<th>TM-T88VI</th>
<th>TM-T88V</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Default</strong></td>
<td>Up to 300 or 350 mm/s</td>
<td>Up to 300 mm/s</td>
</tr>
<tr>

<td>300 mm/s</td>
</tr>
<tr>
<td><strong>Print speed setting</strong> (Customized value)</td>
<td>Level 1 to 14</td>
<td>Level 1 to 13</td>
</tr>
</tbody>
</table>

* The values are those when the paper width is set to 80 mm. When it is set to 58 mm, the maximum is 300 mm/s (11.8"/s).

**CAUTION**

Depending on print conditions such as print duty, print head temperature, and data transmission speed, print speed is automatically adjusted.

**Interface**

In addition to UIB, the printer is equipped with a standard USB interface and a wired LAN interface. You can perform printing using numerous interfaces.

**SimpleAP Function**

The TM-T88VI comes with a mode (SimpleAP) that allows the printer to connect directly when using an optional wireless LAN unit without having to use a wireless LAN access point.

**CAUTION**

The SimpleAP function is for making settings only.

**NFC**

The TM-T88VI is equipped with a built-in NFC tag.

**CAUTION**

When UB-R04 is installed, you cannot use the printer’s built-in NFC. Install the NFC tag for the UB-R04 at a location that is remote from the printer's built-in NFC.

**Epson TM Utility for iOS/Android**

The TM-T88VI allows you to make a variety of settings using the Epson TM Utility for iOS/Android for smart devices running iOS/Android.
Software Settings

For the TM-T88VI, the following software setting functions are added.

- Command execution during offline
- Amount of top margin by backfeed
- Interface switch waiting time
- Main connection interface
- LED indicator when I/F starting
- Number of digits emulation mode
- Select autocutter error release method

For detailed information about the software settings, see “Software Settings” on page 59.

TM-Intelligent function

The TM-T88VI supports the following TM-Intelligent function.

- Supports Server Direct Print that sends a request for print data from the product to the Web server at regular intervals.
- Since print data can be saved in the spooler, applications can be released from processing print jobs regardless of the printer status.
- When a network printer is registered while printing from Epson ePOS SDK for JavaScript, print forwarding process can be realized. Also, if the printer is not ready to print, you can print from another printer.
- Equipped with Web server that supports the scripting language "PHP" and database "SQLite3".

The spooler and print forwarding function is only available with the following control methods or functions.

- Epson ePOS SDK for JavaScript
- ePOS-Print XML
- Server direct print
- OFSC-Print

| | Korean Kanji (KC CS601): 8,366 (for Korean model)  
| | Thai character: 3-pass printing font (for South Asia model)  
| | 128 characters x 3 pages (133 character types)  
| | Vietnam character (for South Asia model)  
| | 128 characters x 2 pages (135 character types) |

| Character structure (W x H dots) | Standard column mode | ANK font A | 12 × 24 dots (Right-side dot space: 2)  
| | ANK font B | 9 × 17 dots (Right-side dot space: 2)  
| | Kanji font A | 24 × 24 dots (Right-side dot space: 0)  
| | Kanji font B | 16 × 16 dots (Right-side dot space: 0)  
| | Special font A | 12 × 24 dots (Right-side dot space: 2)  
| | Special font B | 9 × 24 dots (Right-side dot space: 2)  
| 48 column mode | ANK font A | 10 × 24 dots (Right-side dot space: 1)  
| | ANK font B | 9 × 17 dots (Right-side dot space: 2)  

| Character size (W x H) | Standard column mode | ANK font A | 1.41 × 3.39 mm (0.06 × 0.13")  
| | ANK font B | 0.99 × 2.40 mm (0.04 × 0.09")  
| | Kanji font A | 3.39 × 3.39 mm (0.13 × 0.13")  
| | Kanji font B | 2.26 × 2.26 mm (0.09 × 0.09")  
| | Special font A | 1.41 × 3.39 mm (0.06 × 0.13")  
| | Special font B | 0.99 × 3.39 mm (0.04 × 0.13")  
| 48 column mode | ANK font A | 1.27 × 3.39 mm (0.05 × 0.13")  
| | ANK font B | 0.99 × 2.40 mm (0.04 × 0.09")  

Note:  
1. Space between characters is not included.  
2. Characters can be scaled up to 64 times as large as the standard size.
80 mm paper width printing

The printable area of paper with a width of 79.5 ± 0.5 mm (3.13 ± 0.02") is 72.2 ± 0.2 mm (2.84 ± 0.008") (512 dots), and the space on the right and left sides is approximately 3.7 mm (0.15").

All the numeric values are typical.

**CAUTION**

- In 2-divided energizing, the print position within the printable area of the thermal elements for dots 1 to 256 and 257 to 512 is shifted approximately 0.07 mm (0.0028") in the paper feed direction as shown in the figure below.

- In 4-divided energizing, the print position within the printable area of the thermal elements for dots 1 to 128, 129 to 256, 257 to 384, and 385 to 512 is shifted approximately 0.04 mm (0.0016") in the paper feed direction as shown in the figure below.
58 mm paper width printing

The printable area of paper with a width of 57.5 ± 0.5 mm \(2.26 ± 0.02\)\)” is 50.8 ± 0.2 mm \(2.00 ± 0.008\)” (360 dots), and the space on the left side is approximately 3.7 mm \(0.15\)” and the space on the right side is approximately 3.0 mm \(0.12\)”.

In 2-divided energizing, the print position within the printable area of the thermal elements for dots 1 to 256 and 257 to 360 is shifted approximately 0.07 mm \(0.0028\)” in the paper feed direction as shown in the figure below.

In 4-divided energizing, the print position within the printable area of the thermal elements for dots 1 to 128, 129 to 256, and 257 to 360 is shifted approximately 0.04 mm \(0.0016\)” in the paper feed direction as shown in the figure below.
Printing and Cutting Positions

- The values above may vary slightly as a result of paper slack or variations in the paper. Take this into account when setting the cutting position of the autocutter.
- When removing cut paper, the remaining roll paper is pulled at the uncut section and the pitch of the next print may be reduced. When printing after cutting paper for prints with no pitch reduction, feed the paper about 1 mm (16/406 inches) before printing.
- When leaving paper loaded for an extended period of time, make sure you feed about 30 mm of paper. This can prevent paper from wrinkling and causing prints to be too light.

[units: mm (All the numeric values are typical)]

**Acoustic noise (operating)**

Approximately 55 dB (bystander position)

Note:
The values above are measured in the Epson evaluation condition.
Acoustic noise differs depending on the paper used, printing contents, and the setting values, such as print speed or print density.

**Dust and drip proofness function**

IPX2 equivalent

Note:
Roll paper side is excluded.
When the rubber feet sections are installed horizontally.

* The value measurements are equivalent to JISC0920 (IEC60529:2001) standard. Therefore, safety standard application, and failure and breakage of the printer are not guaranteed.
External Dimensions and Mass

- Width: Approximately 145 mm [5.71”]
- Depth: Approximately 195 mm [7.68”]
- Height: Approximately 148 mm [5.83”]
- Mass: Approximately 1.6 kg [3.53 lb] (except for roll paper)
Network Printer

The TM-Intelligent function supports the following printers as network printers.

* Initial value when "Acquiring the IP Address" is set to "Manual."
Wi-Fi Interface

- Countries where Wi-Fi can be used are limited. Since notes are provided for each country, check the sheet supplied with the product.
- When using wireless LAN, make sure you disconnect the LAN cable. If a LAN cable is connected, wireless LAN is disabled.

**Specification**

- IEEE802.11b/g/n (2.4 GHz band) or IEEE802.11a/b/g/n (2.4 GHz or 5 GHz band) compliant Wi-Fi communication compatible.
- Infrastructure mode and 802.11 Ad-hoc mode are supported.

**Communication Standard**

When using OT-WL02:

- IEEE802.11b (2.4 GHz)
- IEEE802.11g (2.4 GHz)
- IEEE802.11n (2.4 GHz)

When using OT-WL05:

- IEEE802.11b (2.4 GHz)
- IEEE802.11g (2.4 GHz)
- IEEE802.11n (2.4 GHz)
- IEEE802.11a (5 GHz)
- IEEE802.11n (5 GHz)

**Security**

Security can be selected from among the following:

- WEP
- WPA-PSK(AES): WPA-PSK(AES), WPA-PSK(TKIP), WPA2-PSK(AES), WPA2-PSK(TKIP) can be connected
- WPA2-PSK: WPA2-PSK(AES), WPA2-PSK(TKIP) can be connected
- WPA2-Enterprise

**Settings in SimpleAP mode (Factory default settings)**

</table>

Printing communication protocol

- **LP, LPR**: Transfers printing data
- **TCP Socket Port**: Transfers printing data and printer status via bidirectional direct socket communication.

**LP, LPR**

- Max. simultaneous connections: 6
- Number of connections for which printing is available: 1 (Other users need to wait until printing is completed.)
- Time out: 90 sec. (changeable)
- Job cancel: Not available
- Banner printing: Not available

**Socket communication**

- Port type: TCP communication port for direct printing
- Port number: 9100
- Port communication direction: bidirectional
- Max. simultaneous connections: 6
- Number of connections for which printing is available: 1 (Other users need to wait until printing is completed.)
- Time out: 90 sec. (changeable)

**Notes on Using the Wi-Fi Model**

- Keep the printer away from the devices, such as kitchen microwaves, that may cause radio wave interference.
- Use channels that are away from the frequency bands that may cause radio wave interference.
- Place shields between the printer and the devices that may cause radio wave interference.
- Select either 2.4 GHz or 5 GHz, whichever is free from radio wave interference.
- In auto channel setting for the access point, do not select a channel in which the printer may cause radio wave interference.
Notes on Wi-Fi connection

Because not all the combinations of the printer and Wireless LAN units have been checked for operation, the operation of the printer in combination with all the Wireless LAN units is not guaranteed. Especially in the ad-hoc mode, the printer may not operate normally, depending on the combination of the device to connect with. Be sure to carry out evaluation of the operation before use.

Notes on use

- When you initialize or change the printer settings, the printer is reset to reflect the settings. It may take about 1 minute depending on the network settings or environment. Also, your application may indicate power off during the time waiting for reset. In that case, wait for about 1 minute, and then reconnect to the printer.
- Where Wi-Fi communication is in heavy traffic, your application may falsely recognize that the communication is disconnected and indicate power off due to response delay. In that case, disable Power Save to improve the trouble.

Bluetooth Interface

- Countries where Bluetooth can be used are limited. Since notes are provided for each country, check the sheet supplied with the product.
- The circuit board installed in the UIB interface section is for Bluetooth models only. This cannot be replaced so do not remove it.

Specification

- Bluetooth 3.0 (EDR supported)
- Bluetooth Power Class 2
- Built-in antenna

Default Settings

<table>
<thead>
<tr>

</table>
Auto Reconnect Feature

The auto reconnect feature allows the printer to automatically restore a connection in the following situations if the Bluetooth connection to the iOS device is lost.

- When the printer is turned on
- When the signal is dropped and then restored

The following shows the printer operations and connection methods when the auto reconnect feature is enabled or disabled.

<table>
<thead>
<tr>
<th>Auto Reconnect Feature</th>
<th>Enabled</th>
<th>Disabled</th>
</tr>
</thead>
</table>
| Printer operations when Bluetooth is disconnected | **[Reconnection sequence]**  
1. The printer tries to connect to the iOS device to which it was last connected.  
2. When step 1 fails, the printer waits for connections from other devices.  
3. If connection is not established in step 2, the printer tries again to connect to the iOS device to which it last connected.  
Steps 1 and 2 are repeated until a connection is established. | Wait for a connection from the Bluetooth device. |
| Reconnecting to iOS device | Reconnect automatically. | Make settings on the Bluetooth settings screen on the iOS device. |
| Switch to connection from other device | Method 1:  
After disabling the Bluetooth feature of the connected iOS device, make connection settings on the Bluetooth device that you want to connect.  
(When the auto reconnect feature is enabled, it may take some time to connect.) | Method 2:  
After disconnecting from the connected iOS device using applications with the Epson TM Utility for iOS or Epson ePOS SDK disconnection feature, make settings on the Bluetooth device you want to connect. |

* In the following situations, even if the feature is enabled, the same operations are performed as when it is disabled.
  - When pairing is canceled from the connected iOS device.
  - When the last Bluetooth device connected was not an iOS device.
  - When wireless communication settings are initialized from the printer.

* Disable this feature when using the printer from devices that are not running iOS. Otherwise, it may take some time to connect.

* For details on the Auto Reconnect Feature, see "Interface Setup Mode" on page 76.
Notes on use

Time required until printing starts
If the host computer and the printer are not connected on a continuous basis but rather connected every time the printer starts printing, some time may be needed for the printer to actually start printing after the host computer commands printing. This pause is the time required for processing the connection between the host computer and the printer.

After opening the port, leave an interval of 300 msec or more before sending data to the port.

Timing to shut the connection off
If a connection between the host computer and the printer is shut off while the printer is offline, it may not be re-established. In this case, first clear the printer offline causes, and then try to re-establish the connection.

Multi-tone printing
When performing multi-tone printing over Bluetooth, the print speed may fluctuate or intermittent printing may occur due to data transfer conditions, also the print shade may change or white lines may occur.

Interference from Wi-Fi
2.4 GHz Wi-Fi may interfere with Bluetooth communication. Using the optional Wireless LAN cable set (OT-WLxx) with 2.4 GHz may disrupt Bluetooth communication or printing. 5 GHz Wi-Fi is recommended when using Wi-Fi with Bluetooth.

Notes when communicating with Android devices
- The printer cannot connect to Android 2.3 and 2.3.2.
- When communicating with Android 2.3.3 or later versions, communicate through an insecure connection.

Notes when communicating with iOS devices
Print data deletion and Bluetooth disconnections occur
Situation
Depending on the specifications of the iOS device, print data sent to the printer may be deleted. When this occurs, the Bluetooth connection between the printer and the iOS device is disconnected.

Conditions
This occurs when the printer is not ready to print, and 64 KB or more of print data is sent to the printer.

<Status in which the printer cannot print>
- When the roll paper cover is open
- When the paper is out

Solution
Do not send data to the printer if the printer is not ready to print.

For developers using the SDK from Epson, see the SDK User’s Manual provided.

Since Bluetooth is disconnected when this occurs, if the auto reconnect feature is not enabled, you need to reconnect from the Bluetooth settings screen on the iOS device.
When using the SDK from Epson, this connection process is not necessary.

**The iOS application cannot receive the data sent from the printer**

**Situation**
Although the printer sends data to the iOS device and the data is received by the iOS device, depending on the combination of the iOS version and the iOS device, the iOS application may not be able to receive the data.

**Conditions**
This may occur in combinations of the following conditions.

- iOS version: 7.1, 7.1.1
- iOS device: iPhone 5s, iPhone 5c, iPhone 5, iPad Air, iPad mini 3, iPad (4th generation), iPad mini, iPod touch (5th generation), iPhone 4s, iPad (3rd generation), iPad 2
- Application processing: If the Bluetooth port is closed and then reopened while the application is running.

**Solution**
The solution differs depending on the iOS device being used. See the following table.

<table>
<thead>
<tr>
<th>iOS Device</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>iPhone 4s</td>
<td>This situation can be avoided by using the Epson ePOS SDK for iOS.</td>

<tr>
<td>6</td>
<td>DSR</td>
<td>Input</td>
<td>This signal indicates whether the host computer can receive data. SPACE indicates that the host computer can receive data. MARK indicates that the host computer cannot receive data. When DTR/DSR control is selected, the printer transmits data after confirming this signal (except if transmitted using some ESC/POS commands). When XON/XOFF control is selected, the printer does not check this signal. Changing DIP switch 2-7 lets this signal be used as a printer reset signal. When you use this signal as the printer's reset signal, the printer is reset when the signal remains MARK for a pulse width of 1 ms or more.</td>
</tr>
<tr>
<td>7</td>
<td>SG</td>
<td>—</td>
<td>Signal ground</td>
</tr>
</tbody>
</table>

Parity check Select one of the following with DIP switch 1-5:
- Yes
- No

Parity selection Select one of the following with DIP switch 1-6:
- Even
- Odd

Stop bit 1 or more bits
However, the stop bit for data transfer from the printer is fixed to 1 bit.

Connector Printer side DSUB 25-pin (female) connector
When XON/XOFF control is selected, the printer transmits the XON or XOFF signals as follows. The transmission timing of XON/XOFF differs, depending on the setting of DIP switch 2-1.

<table>
<thead>
<tr>
<th>Pin no.</th>
<th>Signal name</th>
<th>Signal direction</th>
<th>Function</th>
</tr>
</thead>
</table>
| 20      | DTR         | Output           | 1) When DTR/DSR control is selected, this signal indicates whether the printer is BUSY.  
• SPACE status  
 Indicates that the printer is ready to receive data.  
• MARK status  
 Indicates that the printer is BUSY. Set BUSY conditions with DIP switch 2-1.  
2) When XON/XOFF control is selected, the signal indicates that the printer is properly connected and ready to receive data from the host. The signal is always SPACE, except in the following cases:  
• During the period from when power is turned on to when the printer is ready to receive data.  
• During the self-test. |
| 25      | INT         | Input            | Changing DIP switch 2-8 enables this signal to be used as a reset signal for the printer. The printer is reset if the signal remains at SPACE for a pulse width of 1 ms or more. |

**XON/XOFF**

When XON/XOFF control is selected, the printer transmits the XON or XOFF signals as follows. The transmission timing of XON/XOFF differs, depending on the setting of DIP switch 2-1.

<table>
<thead>
<tr>
<th>Signal</th>
<th>Printer status</th>
<th>DIP switch 2-1</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>1 (ON)</td>
</tr>
<tr>
<td>XON</td>
<td>1) When the printer goes online after turning on the power (or reset using the interface)</td>
<td>Transmit</td>
</tr>
<tr>
<td></td>
<td>2) When the receive buffer is released from the buffer full state</td>
<td>Transmit</td>
</tr>
<tr>
<td></td>
<td>3) When the printer switches from offline to online</td>
<td>—</td>
</tr>
<tr>
<td></td>
<td>4) When the printer recovers from an error using some ESC/POS commands</td>
<td>—</td>
</tr>
<tr>
<td>XOFF</td>
<td>5) When the receive buffer becomes full</td>
<td>Transmit</td>
</tr>
<tr>
<td></td>
<td>6) When the printer switches from online to offline</td>
<td>—</td>
</tr>
</tbody>
</table>
Code
The hexadecimal numbers corresponding to the XON/XOFF codes are shown below.

- XON code: 11H
- XOFF code: 13H

**CAUTION**
- When the printer goes from offline to online and the receive buffer is full, XON is not transmitted.
- When the printer goes from online to offline and the receive buffer is full, XOFF is not transmitted.
- When DIP switch 1-3 is off, XON is not transmitted as long as the printer is offline, even if a receive buffer full state has been cleared.

IEEE 1284 Parallel Interface

**Modes**
The IEEE 1284 parallel interface supports the following two modes.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Communication direction</th>
<th>Other information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Compatibility mode</td>
<td>Host → Printer communication</td>
<td>Centronics-compliant</td>
</tr>
<tr>
<td>Reverse mode</td>
<td>Printer → Host communication</td>
<td>Assumes a data transfer from an asynchronous printer</td>
</tr>
</tbody>
</table>

**Compatibility Mode**
Compatibility mode allows data transmission from host to printer only: Centronics-compatible.

**Specification**

<table>
<thead>
<tr>
<th>Data transmission</th>
<th>8-bit parallel</th>
</tr>
</thead>
<tbody>
<tr>
<td>Synchronization</td>
<td>Externally supplied STROBE signals</td>
</tr>
<tr>
<td>Handshaking</td>
<td>ACK and BUSY signals</td>
</tr>
<tr>
<td>Signal levels</td>
<td>TTL-compatible connector</td>
</tr>
<tr>
<td>Connector</td>
<td>ADS-B36BLFDR176 (HONDA) or equivalent product</td>
</tr>
<tr>
<td>Reverse communication</td>
<td>Nibble or byte mode</td>
</tr>
</tbody>
</table>

**Reverse Mode**
The transfer of status data from the printer to the host proceeds in the nibble or byte mode.
This mode allows data transfer from an asynchronous printer under the control of the host. Data transfers in the nibble mode are made via the existing control lines in units of four bits (a nibble). In the byte mode, data transfer proceeds by making the 8-bit data lines bidirectional. Both modes fail to proceed concurrently in the compatibility mode, thereby causing half-duplex transmission.

NC: Not Connected  
ND: Not Defined

### CAUTION

- A signal name with a rule above it indicates an “L” active signal.
- Bidirectional communications cannot take place, unless all signal names for both sides correspond to each other.
- Connect all signal lines using a twisted-pair cable. Connect the return side to the signal ground level.
- Make sure the signals satisfy electrical characteristics.
- Set the leading edge and trailing edge times to 0.5ms or less.
- Do not ignore Ack or BUSY signals during a data transfer. Ignoring such signals may result in data corruption.
- Make the interface cables as short as possible.

### NFC Tag

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transmission standard</td>
<td>ISO14443 A</td>
</tr>
<tr>
<td>Frequency</td>
<td>13.56 MHz</td>
</tr>
<tr>
<td>Memory</td>
<td>144 byte</td>
</tr>
<tr>
<td>Transmission distance</td>
<td>Approximately 10 mm from the NFC installation location.</td>
</tr>
</tbody>
</table>

When UB-R04 is installed, you cannot use the printer’s built-in NFC. Install the NFC tag for the UB-R04 at a location that is remote from the printer’s built-in NFC.

### NOTE

- The transmission distance is an estimate that depends on our experiment conditions and is not a guaranteed value.
- It varies based on the installation environment and target device.
Bluetooth Low Energy Technology Advertising

Introduction

When you connect the BT820 from Lairdtec to the USB A connector on the TM-T88VI and turn it on, the Bluetooth low energy technology Advertising Packet is transmitted. By default, the TM-T88VI transmits the packet according to the iBeacon Format from Apple. You can also change the data that is transmitted by following the steps in "Changing the Bluetooth Low Energy Technology Advertising Packet" on page 135.

Glossary:

<table>
<thead>
<tr>

</tr>
<tr>
<td>iBeacon</td>
<td>The format stipulated by Apple for Bluetooth low energy technology Advertising Packets When using the default settings for the TM-T88VI (Bluetooth adapter installed in the printer and the printer is on), the Bluetooth low energy technology Advertising Packet is transmitted in iBeacon format.</td>
</tr>
</tbody>
</table>

Dongle specifications

Manufacturer: Laird Tech
Model name: BT-820

For setting methods and settings, see the TM-T88VI Utility User’s Manual.

Procedure

When turning on the TM-T88VI, the Bluetooth adapter connected to the USB Type A connector is enabled. If you install the Bluetooth adapter after turning on the printer, this is not enabled.

Bluetooth Low Energy Technology Advertising Packet Format

In the TM-T88VI, the iBeacon format is used by default for the Bluetooth low energy technology Advertising Packet.
The UUID for the T88VI is "fac1ba2f-61a2-4d83-9a8c-60087c232569".
The user can edit the following specifications in the iBeacon format: UUID, Major number, Minor number, and Measured Power.

Changing the Bluetooth Low Energy Technology Advertising Packet

The TM-T88VI can acquire a configuration script from the printer.
You can also change settings by transmitting the configuration script to the printer.
The configuration script only supports UTF-8 encoding.
The iBeacon Format is defined in the configuration script by default for the TM-T88VI.
You can change this Packet Format to support Eddystone-UID or Eddystone-URL.
However, the T88VI only supports single Advertising Data Packets.
You can change the settings using either of the following two methods.

- Changing settings using an HTTP Request

The method of changing settings via an HTTP Request is explained below.

Digest authentication

You need Digest authentication to communicate with the printer.
The default ID and Password are ID: epson, Pass: epson and are the same as the administrator for Network settings.
Escape processing for configuration scripts

When reading/writing a configuration script for a printer, the strings (content of the configuration script) being transmitted and received uses the following escape processing. However, escape is not performed for uXXXX (hexadecimal strings) such as Japanese.

**Table 2 Escape Processing**

<table>
<thead>
<tr>
<th>Escape</th>

**Table 8 GET Response Body (Type=status)**

**Writing the configuration script to the printer**

You can save a configuration script to the printer using the HTTP POST method.

You can save the configuration script to volatile or non-volatile memory.
When changing using a low frequency less than once an hour, you can save to non-volatile memory; however, when changing at a higher frequency, you need to save to volatile memory. When the change is successful, the advertising data is changed.

**Request**

```
Content-Type: text/json; charset=utf-8
http://(printer IP address)/webconfig/beacon.cgi
```

See the POST parameters in Table 10 Response for the parameters.

**Response**

**Table 9 Response Header**

```
Content-Type: application/json; charset=utf-8
Access-Control-Allow-Origin: *
Access-Control-Allow-Methods: POST, GET, OPTIONS, HEADER
Access-Control-Allow-Headers: Content-Type, Content-Length, Authorization
X-Content-Type-Options: nosniff
X-XSS-protection: 1; mode=block
X-Frame-Options: deny
Content-Security-Policy: default-src 'none'
X-RateLimit-Limit: 1 or 0 (when type=static only)
X-RateLimit-Remaining: 1390941626 (when type=static only)
WWW-Authenticate: Digest realm="<IPaddr>", nonce="xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx", qop="auth"
```

  60087c232569 | TM UUID |
|                             |        | d27: 00  
  d28: Model No.          | Major number  
  The Default specifies the ID that indicates the model type using keywords shown in "Keywords" on page 145.  
  You can also specify a direct value. |
|                             |        | d29: 00  
  d30: IP address 4th byte| Minor number  
  The Default specifies the 4th sector of the IP address using keywords shown in "Keywords" on page 145.  
  You can also specify a direct value. |
|                             |        | d31: C5 | CS: -59dB                                      |
|                             |        | d32: 00 | 00h: Fixed value                              |
Keywords

You can specify the following keywords when describing the script.

<table>
<thead>
<tr>
<th>Reserve String</th>
<th>Length</th>
<th>Content</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>$SERIAL_ADDR</td>
<td>6 bytes</td>
<td>Address that uses 1 for the MSB2bit in the last 6 digits of the printer’s serial number.</td>
<td>When the Serial No. is ABCD123456, the Address uses 1 for the MSB2bits for the leading 1 byte in the last 6 digits. F1:32:33:34:35:36 is generated and replaced with a string using 36 35 34 33 32 F1 sorted in Little endian.</td>
</tr>
<tr>
<td>$RANDOM_ADDR</td>
<td>6 bytes</td>
<td>Address in which the printer generates a random 6 byte number, and 1 is for the MSB2bit of the leading 1 byte.</td>
<td>Generates a random 6 byte number in the printer and replaces it with a string that sorts the Address using 1 for the MSB2bits for the leading 1 byte in Little endian.</td>
</tr>
<tr>
<td>$IPn</td>
<td>1 byte</td>
<td>Value for #n in the printer's IP address.</td>
<td>When the IP address is 192.168.192.168, it is replaced with the following string. IP1: c0 IP2: A8 IP3: 64 IP4: c8</td>
</tr>
<tr>
<td>$MODEL_NO</td>
<td>1 byte</td>
<td>ID value assigned to the printer model.</td>
<td>02h is used for the TM-T88VI. 00: no use 01: reserve 02: TM-T88VI</td>
</tr>
<tr>
<td>$MACn</td>
<td>1 byte</td>
<td>Value for #n in the MAC address.</td>
<td>Available range: $MAC1, $MAC2, $MAC3, $MAC4, $MAC5, $MAC6</td>
</tr>
<tr>
<td>$BD_ADDRn</td>
<td>1 byte</td>
<td>Value for #n in the Bluetooth address.</td>
<td>Available range: $BD_ADDR1, $BD_ADDR2, $BD_ADDR3, $BD_ADDR4, $BD_ADDR5, $BD_ADDR6</td>
</tr>
</tbody>
</table>
