Order Popup Window

About this Guide

This guide consists of 3 sections:

- **Overview** – A detailed description of the Order Popup Window.
- **How to with the KB1700** – KB1700 bump bar operation.
- **How to with the KB9000** – KB9000 bump bar operation.

This guide is relevant for:

KDS FW: **v2.50 and above**
KDS Utility (Windows): **v2.5.0.0 and above**

Overview

An order can be selected to be viewed in its own pop-up window. This is convenient if orders span multiple windows or if an order in the last tile extends off screen and you would like to see the entire order in its own window. This functionality is only available if using bump bar. You cannot use this feature with a touchscreen.
