Legal Notices
Neither Seiko Epson Corporation nor its affiliates shall be liable to the purchaser of this product or third parties for damages, losses, costs, or expenses incurred by purchaser or third parties as a result of: accident, misuse, or abuse of this product or unauthorized modifications, repairs, or alterations to this product, or (excluding the U.S.) failure to strictly comply with Seiko Epson Corporation’s operating and maintenance instructions.

Seiko Epson Corporation shall not be liable for any damages or problems arising from the use of any options or any consumable products other than those designated as Original Epson Products or Epson Approved Products by Seiko Epson Corporation.
FCC Compliance Statement

For United States Users
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) this device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.

WARNING
The connection of a non-shielded equipment interface cable to this equipment will invalidate the FCC Certification of this device and may cause interference levels which exceed the limits established by the FCC for this equipment. It is the responsibility of the user to obtain and use a shielded equipment interface cable with this device. If this equipment has more than one interface connector, do not leave cables connected to unused interfaces. Changes or modifications not expressly approved by the manufacturer could void the user’s authority to operate the equipment.

For Canadian Users
This Class A digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

WARNING
This is a Class A product. In a domestic environment this product may cause radio interference, in which case the user may be required to take adequate measures.

Introduction

This Printer Guide provides important information on setting up and using your printer, loading paper, using the Epson® printer drivers, and replacing ink cartridges. It also tells you how to maintain your printer to keep it working at its best, and provides troubleshooting tips in case you have a problem.

For additional information, see the following:

- The Quick Reference Guide provides a handy summary of procedures for daily use and printer maintenance—loading paper, replacing ink cartridges and other components, cleaning and aligning the print head, and using the printer’s menu system. Attach it to your printer for easy reference.

- The on-screen Epson Network Guide on your computer or the printer CD-ROM describes how to set up and configure the printer for use on a network.

- The on-screen Epson SP 11880 User’s Guide on your computer or the printer CD-ROM provides additional information about using the printer and Epson media. You can read the guide using Adobe® Reader.

Warnings, Cautions, Notes, and Tips

Please follow these guidelines as you use this book:

**WARNINGS** must be followed carefully to avoid bodily injury.

**Cautions** must be observed to avoid damage to your equipment.

**Notes** contain important information about your printer.

**Tips** contain additional hints on how to get the most out of your printer.
**Options and Accessories**

Your Epson Stylus® Pro 11880 offers these optional upgrades and accessories:

**Optional equipment**

<table>
<thead>
<tr>
<th>Option</th>

You can purchase optional equipment and genuine Epson ink and paper from an Epson Professional Imaging authorized reseller. To find the nearest reseller, visit www.proimaging.epson.com (U.S. sales), www.epson.ca (Canadian sales), or call 800-GO-EPSON (800-463-7766). Or you can purchase online at www.proimaging.epson.com (U.S. sales) or www.epson.ca (Canadian sales).

**Where To Get Help**

Epson provides technical support and information on the installation, configuration, and operation of professional printing products through the Epson Preferred Limited Warranty Plan. Dial (888) 377-6611, 6 AM to 6 PM, Pacific Time, Monday through Friday. Days and hours of support are subject to change without notice.

**Tip:** Check the Epson Pro Imaging website at www.proimaging.epson.com for accessories and options that are currently available.
Before you call, make sure you have your Unit ID number, which is included with the Epson Preferred Limited Warranty Plan information that came with your printer. You’ll also need your printer serial number.

Visit Epson’s support website at epson.com/support and select your product for solutions to common problems. You can download drivers, firmware, and documentation, get FAQs and troubleshooting advice, or e-mail Epson with your questions.

**Macintosh System Requirements**

To use your printer in either a stand-alone or network environment, your Macintosh® system should meet these requirements:

- Mac OS® X 10.4.9 or higher, or 10.5 or higher
- PowerPC® G5, Intel®, or higher processor
- At least 1GB of RAM (2GB or more recommended)
- At least 30GB of free hard disk space for software and processing files
- Quad-speed (4x) or faster CD-ROM or DVD drive for installing the printer software
- For USB connection: a compliant USB Hi-Speed 2.0 port and a shielded USB “AB” cable from Series A (computer) to Series B (printer), up to 10 feet long
- For network connection: Ethernet-equipped Macintosh and a Category 6 compatible cable

**Tip:** If you experience difficulty with the toll-free line or your Unit ID number, call (562) 276-1305.

**Caution:** Using an improperly shielded cable—especially a cable more than 10 feet long—may cause the printer to malfunction.

**Note:** USB 2.0 is required to run the printer at full speed.
**Windows System Requirements**

To use your printer in either a stand-alone or network environment, your system should include the requirements listed below:

- IBM®-compatible PC with a Pentium® 4, 3 GHz or higher processor recommended
- Microsoft® Windows® XP, Windows XP Professional x64 Edition, Windows Vista,™ or Windows Vista x64
- At least 1GB of RAM (2GB or more recommended)
- At least 30GB of free hard disk space for software and processing files
- Quad-speed (4x) CD-ROM or DVD drive for installing the printer software
- For USB connection: a Windows-compliant USB 2.0 port and a shielded USB “AB” cable from Series A (computer) to Series B (printer), up to 10 feet long
- For Ethernet connection: Ethernet equipped PC and a compatible Category 6 cable

**Important Safety Instructions**

Before using your printer, read the following safety instructions to make sure you use the equipment safely and effectively.

- The printer weighs about 331 lb without ink or paper. Make sure you have sufficient assistance when lifting it. (See page 23.)
- When setting up the printer, make sure you have enough space around it. You may need more space behind the printer if you print on large sheets of heavy stock or posterboard. (See page 22.)
- Place the printer on a flat, stable surface. The printer will not operate properly if it is tilted or at an angle.
- Avoid places subject to rapid changes in temperature and humidity. Also keep the printer away from direct sunlight, strong light, heat sources, or air conditioners.
- Avoid places subject to shocks and vibrations.
Keep the printer away from dusty areas.

Keep your entire computer system away from potential sources of electromagnetic interference, such as loudspeakers or the base units of cordless telephones.

Place the printer near a wall outlet where the plug can be easily unplugged.

Use only the type of power source indicated on the label.

Connect the printer to a properly grounded outlet. Avoid using an outlet on the same circuit as a photocopier or air control system that regularly switches on and off.

Avoid using electrical outlets controlled by wall switches or timers.

Use only the power cord that comes with the printer. Use of another cord may result in fire or electric shock.

The printer’s power cord is designed for use with the printer only. Using it with other equipment may result in fire or electric shock.

Do not use a damaged or frayed power cord.

If you use an extension cord with the printer, make sure the total ampere rating of devices plugged into the extension cord does not exceed the cord’s ampere rating. Also, make sure the total ampere rating of all devices plugged into the wall outlet does not exceed the wall outlet’s ampere rating.

Do not block or cover the openings in the printer’s case.

Do not put your hand inside the printer during printing.

Do not move the print head by hand unless instructed to do so by an Epson service technician; otherwise you may damage the printer.

Do not insert objects through the slots. Take care not to spill liquid on the printer.

Do not attempt to service the printer yourself.

**Caution:** Always turn the printer off using the Power button. When you press this button, the Power light flashes briefly then goes off. Do not unplug the printer or turn off the power to the printer until the Power light stops flashing. This ensures that the print head is safely capped.
• Power down the printer from the control panel, unplug the printer, and refer servicing to qualified service personnel under the following conditions:

The power cord or plug is damaged; liquid has entered the printer; the printer has been dropped or the cabinet damaged; the printer does not operate normally or exhibits a distinct change in performance.

• The interface connectors and the connector for the Auto Take-up Reel are limited power source connectors.

• Do not touch the front cover sensors highlighted below.

• Do not touch the metal plate located in the upper left ink cartridge compartment.

For California customers only:
The lithium batteries in this product contain Perchlorate Material - special handling may apply, See www.dtsc.ca.gov/hazardouswaste/perchlorate.
Ink Cartridge Safety Instructions

- Keep ink cartridges out of the reach of children and do not drink the ink.
- Store ink cartridges in a cool, dark place.
- If ink gets on your skin, wash it off with soap and water. If ink gets in your eyes, flush them immediately with water.
- Shake ink cartridges well before installing them for best results.
- Do not use an ink cartridge beyond the date printed on the cartridge carton.
- Use up the ink cartridge within six months of installation for best results.
- Do not dismantle ink cartridges or try to refill them. This could damage the print head.
- After bringing an ink cartridge inside from a cold storage site, allow it to warm up at room temperature for at least four hours before using it.
- The IC chip on the ink cartridge retains a variety of cartridge information, which allows you to remove and reinsert it freely. However, each time the cartridge is inserted, some ink is consumed because the printer automatically performs a reliability check.
- If you remove an ink cartridge for later use, protect the ink supply area from dirt and dust, and store it in the same environment as this product. Note that there is a valve in the ink supply port, making covers or plugs unnecessary, but care is needed to prevent ink from staining items that the cartridge touches.
- Do not touch the ink supply port, its surrounding area, or the green IC chip on the side of the ink cartridge. Doing so may affect normal operation and printing.

Caution: Do not use too much force when you shake cartridges that have been previously installed.
Printer Parts

Chapter 1: Setting Up the Printer

This chapter includes the following information:
- Unpacking and assembling the printer
- Connecting the power cord
- Installing ink
- Connecting to the network
- Installing the printer software
- Updating the printer firmware
- Configuring the printer for your network

WARNING: Avoid locations that are subject to excessive heat, poor ventilation, or dust; otherwise, smoke or fire could result. Avoid locations in direct sunlight or near air conditioners. Do not block the ventilation openings. Do not place the printer on a carpet or rug, and do not cover the printer with any type of cloth when it is operating. Leave at least 12 inches between the back of the printer and the wall. Do not place the printer in an unstable location; bodily injury may occur if it falls.

Unpacking and Assembling the Printer

Follow these steps to assemble your printer and its stand. Before you begin, select an appropriate location to set up and use the printer.

- Choose a flat and stable location that can support the printer’s weight (about 331 lb, without the stand).
- Operate the printer under the following conditions: 50 to 95 °F (10 to 35 °C), 20 to 80% relative humidity, without condensation. In addition, make sure the environmental conditions are appropriate for the media you are using.

This illustration shows the minimum space required for using the printer:

![Minimum Space Illustration](image-url)
**WARNING:** Two people are required to unpack the printer, and four are needed to place it on the stand.

**Unpacking and Assembling the Stand**

1. Open the printer box and remove the box that contains the stand.

2. Unpack the stand and make sure you have all these items:
3. Insert the support bar into the left base section as shown. Then attach it with two bolts using the included wrench. Leave the bolts a little loose, so that you can adjust the position when you insert the bolts at the other end.

4. Attach the right base section to the other end.

5. Tighten all four bolts securely.
Unpacking the Printer

1. Open the box and remove the roll paper, spindle, polystyrene foam, and cardboard cushions.

2. Lift the box up and away from the printer. Remove the ink cartridges and other accessories from the side as shown below.

3. Remove the cardboard panels from around the printer.

4. Remove the plastic cover from the printer.
5. Make sure you have all the items shown below, in addition to the printer:

Note: The ink cartridges included with the printer are mainly for initial setup.

Mounting the Printer on the Stand

1. Turn the two front casters and push down the locks to keep the stand from rolling.
2. Position the stand in front of the printer. Using four people, grasp the printer in the four locations as shown, and set the printer on the stand:

**WARNING:** Do not attempt to lift the printer with fewer than four people.

3. Fasten the printer to the stand with the wing nuts, spring washers, and plain washers.
Unpacking the Auto Take-Up Reel

Make sure you have all the items shown below.

Installing the Auto Take-up Reel

1. Attach the drive unit to the right side of the support bar as shown below, and use the large screws to secure the drive unit.
2. Attach the right paper stop (labeled R) to the drive unit by pinching the knob.
   
   One side of the paper stop is for the 3-inch core, and the other side is for a 2-inch core. Select the appropriate side for the core you are using.

3. Attach the clamps to the stand, and route the cord through the clamps.
4. Plug the cable into the connector on the back of the printer as shown below, then tighten the screws on both sides of the connector.

5. Attach the movable unit to the left side of the support bar. Turn the lock lever to the left to release it.

6. While holding the movable unit, attach the movable unit stopper as shown. Snap the two tabs on the stopper into the movable unit. Use the two screws to secure the movable unit to the support bar.

7. Attach the left paper stop (labeled L) to the movable unit by pinching the knob.
One side of the paper stop is for the 3-inch core, and the other side is for a 2-inch core. Select the appropriate side for the core you are using.

8. Attach the reflector to the left side of the stand, then tighten the two screws.
Installing the Take-up Reel Core and Paper Guides

1. Make sure the lock lever is released (turned to the left). Slide the movable unit to the left end of the support bar.

2. Slip one end of the core over the paper stop knob on the drive unit.

3. Insert the paper stop on the movable unit into the other end of the core.
4. Make sure the core is attached securely at both ends. Then turn the lever to lock the movable unit as shown.

**Tip:** To ensure a good fit, you might want to stretch out the guides before squeezing them into place.

5. Attach the paper guides to the printer as shown.
Plugging in the Printer

1. Unlock the front casters. Then move the printer to the place of use. (The casters are meant for moving the printer for only a short distance indoors.) Lock the casters after you move the printer.

2. Remove the tape from the printer and the protective materials inside the ink compartments.

3. Open the front cover. Loosen the bolts and remove the two metal brackets from the side of the print head compartment. Save the bolts and brackets in case you need to ship the printer.

Caution: To avoid damaging the printer, be careful not to touch the cables around the print head.
4. Close the front cover.

5. Connect the power cord to the AC inlet on the back of the printer.

6. Route the power cord through one of the hooks on the left or right side as shown.

**Caution:** Do not use an outlet that is controlled by an automatic timer or wall switch. Otherwise, you may accidentally shut off the printer and cause damage.

7. Plug the power cord into a properly grounded electrical outlet.
Installing Ink

Use the ink cartridges that came with your printer for initial ink charging. During the initial installation process, it is normal for up to one-third of the ink in each cartridge to be used.

1. Press the ⚪ Power button to turn on the printer.

2. When the ink status lights start flashing and the ink covers pop open, open the covers all the way. You may need to press the ink cover buttons to open the covers.

3. Remove each ink cartridge from its package and gently shake the cartridge.

Note: The cartridges shipped with your printer contain approximately 110 ml of ink and are provided mainly to charge the ink system. Make sure you order a set of 700 ml cartridges as soon as possible.
4. Note the location of the slots corresponding to each cartridge:

5. Hold each cartridge with the arrow pointing toward the printer, then insert it into its slot. Make sure you insert each cartridge in the correct slot.

6. After installing all 9 cartridges, close the ink compartment.
The printer begins charging the ink delivery system and the Power light flashes.

7. After ink charging is completed, you need to load paper so that READY will appear on the LCD display. See Chapter 2 for instructions.

**Connecting the Printer**

You can connect the printer directly to a computer using a USB cable, or you can connect the printer to your network.

For network use, make sure you have the correct cable for connecting the printer. You need a Category 6 shielded twisted-pair cable.

To connect to a network hub, you need a standard RJ-45 “straight-through” network cable. To connect directly to your computer’s network interface, you need an RJ-45 crossover cable.

1. Make sure the printer is turned off.

2. Plug the interface cable into the appropriate port on the printer.

3. Plug the other end of the cable into the appropriate connector on your computer, or your network switch or hub.

**Caution**: Charging takes about 10 minutes. Never turn off the printer, release the paper lever, open the ink compartment covers, or open the front cover while the Power light is flashing, or you may damage the printer.
Configuring the Network Interface

You can configure the network interface using the control panel, as described below, or using the EpsonNet Config utility, as described on page 46.

1. Make sure the printer is turned on.

2. Press the Menu button on the printer’s control panel.

3. Press ▼ to highlight NETWORK SETUP, then press ►.

4. Press ► then ▼ to highlight ENABLE.

5. Press ©. An asterisk appears next to ENABLE to show that it’s selected.

6. Press ◄ then ▼ to highlight IP ADDRESS SETTING.

7. Press ► and then ▲ or ▼ to choose one of the following IP configuration settings:
   - AUTO: Select this setting if your network uses a DHCP server to configure your network devices’ IP settings automatically.
   - PANEL: Select this setting if you would like to configure the printer’s IP settings manually.

8. Press ©. An asterisk appears next to the setting you selected.

9. Press ◄ to go back. Then do one of the following:
   - If you selected AUTO as the IP ADDRESS SETTING, press the Pause button to exit the printer menu. Then continue with step 14.
   - If you selected PANEL as the IP ADDRESS SETTING, continue with step 10.

10. Press ▼ to highlight IP, SM, DG SETTING, then press ►. The LCD displays the IP address.

11. Press ▲ or ▼ to change each octet value, then press ► to select the next octet. When you have changed the value of the last octet, press ►. The LCD displays the subnet mask.

Note: If you don’t know which setting to use, see your network administrator for help configuring the printer’s IP settings.
12. Press ▲ or ▼ to change each octet value, then press ► to select the next octet. When you have changed the value of the last octet, press ►. The LCD displays the default gateway.

13. Press ▲ or ▼ to change each octet value, then press ► to select the next octet. When you have changed the value of the last octet, press ▼, then press the Pause button to exit the printer menu.

14. Turn the printer off then back on again.

**Installing the Software for Macintosh**

Follow the steps below to install the software on a Macintosh. For Windows, see page 41.

1. Turn on your Macintosh and the printer.

2. Insert the printer software CD-ROM.

3. Double-click the Epson installer icon.

4. Read the software license agreement and click Agree.

**Note:** You can check for a newer version of your printer driver on the Epson support site at epson.com/support.
You see the Epson Software Installation screen.

Note: If you see a message that the installer has detected an older version of EpsonNet Config on your system, you must uninstall the older version before you can install the new one. To uninstall, drag the EpsonNet folder to the trash. Then reinstall your printer software.

5. Click the Install button.

6. Follow the on-screen instructions to install the software and manuals, register your printer, and place a link to the Epson Professional Imaging website on your desktop.

7. When you see the prompt, click Restart.

Remove the printer software CD-ROM and follow the instructions for adding the printer on page 39.
Adding the Printer

1. Open the Applications folder, then open the Utilities folder and start the Printer Setup Utility.

2. If you see a message like this, click Add, then skip to step 4.

3. Click the Add icon at the top of the Printer List window.
You see your printer in the Printer Browser:

**Tip:** If you want to rename the printer for easier identification, enter a new name for it in the Name field on this screen.

For network connection, click **More Printers**, and select a connection, such as **EPSON TCP/IP**. Select your printer from the list, and then click **Add**.

If the printer does not appear, enter its IP address here.

4. Select your printer, then wait while your Macintosh finds the driver and the Add button becomes available. Then click **Add**.
You see your printer in the Printer List.

5. Close the Printer Setup utility. Go to page 43 to update your printer firmware, if necessary.

**Installing the Software for Windows**

For Windows, you need to add the printer’s network port, then install the software. For instructions on adding the network port, see the *Network Guide* on the printer CD or on your computer.

Follow these steps to install the printer software.

1. Insert the printer software CD-ROM in your computer.
   
   With Windows Vista, when you see the User Account Control screen, click *Continue*.

2. Read the software license agreement and click *Agree*. 
You see the Epson Software Installation screen:

3. Click the Install button and follow the on-screen instructions to install the software and manuals and place a link to the Epson Professional Imaging website on your desktop.

4. When you see a screen like this one, click the Manual button.
5. Select the port you created for the printer, then click OK.

![Printer Port Selection](image)

**Note:** If the installer detects an older version of EpsonNet Config on your system, the older version will be uninstalled before the new version is installed.

6. Follow the instructions to finish installing the printer software and register your printer.

7. Close the installer, then remove the CD-ROM. Go to the next section to update the printer firmware, if necessary.

### Updating Your Printer Firmware

To keep your printer features and functionality up to date, you should check for a newer version of firmware on the Epson support site and update your printer, if necessary.

### Downloading the Firmware

1. Visit Epson’s support website at epson.com/support and select your product.

2. Click Drivers and Downloads.

3. Choose the version for Macintosh or Windows and follow the instructions on the screen.

   You may also need to download the latest version of the Epson LFP Remote Panel utility.
4. Continue with the instructions in the next section to upgrade the firmware.

**Note:** Although the illustrations in this section show Windows screens, the procedure is the same for Macintosh.

**Updating the Firmware**

1. Double-click the firmware file to extract it.

2. Click the **EPSON LFP Remote Panel** icon on your desktop. You see the LFP Remote Panel. Make sure your printer is selected.

3. Click the **Firmware Updater** button.

4. Click one of the **Update** buttons.

**Note:** For more information on using the Epson LFP Remote Panel, click **Help** to see the electronic guide.
You see the Firmware Updater window.

5. Make sure your printer is on, its LCD displays Ready, and it is connected to your computer or network, then choose your printer.

6. Click Browse and find the firmware file that you just downloaded and extracted. Select the file and click Choose.

7. If the firmware version of the file is newer, click Update to start the firmware updating process. (If it is the same, you don’t need to update.)

8. When the update is complete, close the Firmware Updater window and Epson LFP Remote window.

If you have not already done so, follow the instructions in the next section to configure the printer for your network.

Caution: Don’t turn off the printer while the firmware is updating.

Note: After you install the software, you need to load paper and print a test image. If the print quality is satisfactory, your setup is done. If not, you may need to align the print head, as described on page 132.
Configuring the Printer for Your Network

If you have not already configured the printer using the control panel (or if you need to change its configuration), you can use EpsonNet Config.

1. Turn on the printer.

2. Start EpsonNet Config.
   
The EpsonNet Config program searches for all Epson printers on the network and displays the MAC address for each printer that it finds, for example:

3. Highlight the printer that you want to configure and click Configuration to access the TCP/IP selection screen.

4. If necessary, contact your network administrator for instructions on assigning an appropriate IP address.

For more information, see the Epson Network Guide on your computer or on the printer CD-ROM.
Chapter 2: Handling Paper and Other Media

The Epson Stylus Pro 11880 prints on a variety of media, including roll paper and sheets up to 64 inches wide. You can also use heavy stock, such as posterboard up to 59 mil (1.5 mm) thick.

This chapter includes the following information:

- Selecting media for your printer
- Using roll paper
- Using the auto take-up reel
- Using cut sheet paper
- Optimizing the settings for your paper

Selecting Media for Your Printer

Epson offers a variety of coated, glossy, matte, and fine art paper, as well as other media, for your printer.

The following table shows the paper sizes you can use:

<table>
<thead>
<tr>
<th>Roll paper</th>
<th>Cut sheets</th>
</tr>
</thead>
<tbody>
<tr>
<td>16 to 64.0 in. wide (406 to 1626 mm)</td>
<td>Letter size up to 64 in. wide</td>
</tr>
</tbody>
</table>

Maximum external roll diameter:
- 2 in. core: 4 in. (103 mm)
- 3 in. core: 6 in. (150 mm)

Thickness:
- 3.15 to 19.7 mil (0.8 to 0.5 mm)
- 3.15 to 59 mil (0.8 to 1.5 mm)

Always test samples of paper stock in the printer before purchasing large quantities or printing large jobs. If you use non-Epson paper or other media, you may need to adjust various settings and create special paper configurations. See page 75 for instructions.
Guidelines for Using Epson Media

Follow these guidelines, as well as those included in your paper package, when printing on Epson paper and other media:

- Avoid touching the printable surface with your bare hands. Fingerprints may affect print quality. Handle media by the edges or use cotton gloves.
- Be careful not to bend or scratch the paper.
- Make sure you maintain a temperature of 59 to 77 °F (15 to 25 °C), with 40 to 60% relative humidity. Avoid rapid changes in temperature and humidity.
- Always choose the correct Media Type setting in your printer driver software before you send your job. See page 86 (Mac OS X) or page 105 (Windows) for instructions.
- Always select the correct paper source (roll or sheet) in both the printer driver software and on the printer’s control panel. See page 81 (Mac OS X) or page 112 (Windows) for instructions on selecting the paper source in your printer software.
- Keep unused media in its original packaging and store it in a cool, dry place to maintain quality. Avoid storing your printouts where they will be exposed to high temperature, humidity, or direct sunlight.
- Do not use a dryer to dry your prints.
- Load the media just before printing. When you’re finished printing, remove the media from the printer and store it according to the instructions included with the media.
- Store sheet media in the original package on a flat surface.
- Always load cut sheets in the portrait orientation.
Handling Paper and Other Media | 49

Using Roll Paper

You can use roll paper with a 2- or 3-inch core, up to 64 inches wide. Manually switching rolls is a simple process. Check the Epson Pro Imaging website (www.proimaging.epson.com) or your Epson Professional Imaging authorized reseller for available media.

Roll Paper Guidelines

When printing on roll paper, be sure to follow the media handling guidelines on page 48, as well as these special guidelines for roll paper:

- When storing roll paper, keep it in its original packaging—including the bag, end caps, and box.

- To avoid feeding excess paper, make sure the Sheet icon does not appear on the LCD display. Press the Paper Source button until the or roll icon appears.

- Choose if you want the paper to be cut automatically after each page is printed.

- Do not leave roll paper loaded in the printer when it is not in use.

- Choose if you want to print a series of pages and use the auto take-up reel.

- Choose if you’re printing on canvas or other heavy media. Media that is too thick may damage the cutter. Use a matte knife or cutter instead.

The following media (and other similar materials) may not work with the built-in cutter:

- Fine art paper (including Epson Textured and UltraSmooth® Fine Art Paper)
- Canvas
- Vinyl
- Matte board
- Heavyweight polyester banner media

- If you’re loading heavy paper, you may need to increase the paper suction by pressing the Paper Feed button.
• For lightweight paper, decrease the suction by pressing the ▼ Paper Feed button if necessary.

Selecting the Paper Type

Whenever you load a new type of paper, you need to select the paper type on the printer’s control panel.

1. Press ► Menu.

2. Press ▲ or ▼ to select PAPER SETUP, then press ►.

3. Select PAPER TYPE, then press ►.

4. Select the paper that you are using as listed below, then press the◄ uphill button to save the setting.

5. Press the ■ Pause button to exit the menu.

If your paper does not appear on the control panel, check the instructions included with the paper, or look on the Epson website (www.proimaging.epson.com). If you are using non-Epson paper, consult the manufacturer for the best setting. You may have to experiment with different settings to determine which one is best for the media you’re using.

Handling Paper and Other Media | 51

Setting Up Automatic Media Tracking and Identification

Before you load roll paper in the printer, you can set up the automatic media tracking system. This system prints a barcode on the edge of the paper that indicates the media type, roll length, and the alert setting.

When the printer is turned on or roll paper is placed in the printer, the barcode is scanned and the amount of roll paper remaining is displayed on the LCD panel. You will see an alert message when the roll is nearly used up.

You can have the barcode printed after each print job or only when you change roll paper.

Setting Up Automatic Media Tracking and Identification

Before you load roll paper in the printer, you can set up the automatic media tracking system. This system prints a barcode on the edge of the paper that indicates the media type, roll length, and the alert setting.

When the printer is turned on or roll paper is placed in the printer, the barcode is scanned and the amount of roll paper remaining is displayed on the LCD panel. You will see an alert message when the roll is nearly used up.

You can have the barcode printed after each print job or only when you change roll paper.
Make sure the paper lever is secured and PAPER OUT appears on the control panel. Then follow these steps to set up the automatic media tracking system:

1. Press ▶ Menu.

2. Press ▲ or ▼ to select PAPER SETUP, then press ▶.

3. Press ▼ to select ROLL PAPER REMAINING.

4. Press ▶ to select REMAINING PPR SETUP.

5. Press ▶, then select one of the following settings:
   - **ON:PRINT EVERY PAGE**
     The barcode (indicating the media type, roll length, and alert setting) is printed at the end of each print job.
   - **ON:AT ROLL EXCHANGE**
     When you place roll paper in the printer, the paper lever will be locked. You need to press and hold the ▼ button for three seconds to print the barcode (indicating the media type, roll length, and alert setting) and release the paper lever.
   - **OFF**
     Automatic media tracking is disabled.

6. Press the ▼ button to save the setting.

7. Press ◀, then ▼ to select ROLL PAPER LENGTH.

8. Press ▶, then select the length of the roll paper loaded in the printer, from 15 to 300 ft (5 to 99.5 m), then press ▼.

9. Press ◀, then press ▼ to select ROLL LENGTH ALERT.

10. Press ▶, then select the length at which you want to receive an alert message, from 3 to 50 ft (1 to 15 m), then press ▼.

11. Press the ■ Pause button to exit the menu.

**Tip:** You can use Maintenance mode to switch the units of measurement in the printer from meters to feet. See page 137 for instructions.
Preparing the Spindle

You can use the spindle for roll paper with either a 2-inch or 3-inch core, and adjust the tension from normal to high.

To use paper with a 3-inch core, you need to attach the spindle adapters:

1. Slide the black paper stop off the left end of the spindle.

![Image 1]

2. Attach the adapters to the paper stops as shown, matching the four arrows.

![Image 2]

To remove the adapters, slide the black paper stop off the end of the spindle. Then press on the four tabs and slide the adapters off the paper stops.

![Image 3]
3. To adjust the tension on the spindle, slide the switch to H for high tension, or N for normal.

Switch to high tension when printing on fine art paper, cloth, or other media that weigh less than 100 g/sm. See your on-screen User’s Guide for a list of media that require the high tension setting.

**Loading the Paper onto the Spindle**

Follow these steps to attach the roll to the spindle:

1. Slide the black paper stop (flange) off the left end of the spindle.

2. Position the roll so the paper unwinds as shown, then slide the spindle into the roll. Make sure the gray paper stop at the right end of the spindle is firmly locked into the core and there is no gap between the paper and the paper stop.

3. Slide the black paper stop back onto the spindle and insert it into the end of the roll. Make sure it is firmly locked into the left end of the paper roll core.

*Note:* The spindle accommodates both 2-inch and 3-inch roll paper cores. To switch between different size cores, see page 53.

Avoid touching the printable surface of the paper as much as possible. Oils from your skin can affect print quality.
Placing the Paper in the Printer

If the media tracking system is enabled, a barcode is scanned when you install roll paper in the printer. This enables the printer to keep track of the amount of paper remaining at all times and warn you when it is running out. See page 51 for more information.

Follow these steps to place the paper in the printer:

1. Open the roll paper cover.

2. Place the roll paper in the roll holder as shown. (The gray end of the spindle goes on the right.)

**WARNING:** Make sure you have two people lift the roll, handling it by the paper stops at both ends.
3. Align the roll with the rails on both sides, and slowly roll it into place on the mounting brackets.

4. Make sure the Pause light is not flashing, then release the paper lever.

If the media tracking system is set up to scan the barcode when you insert the paper, you will see the remaining amount of paper displayed on the LCD panel, and the paper lever will be locked. Press and hold the button for 3 seconds to unlock the paper lever.

**Caution:** Do not release the paper lever while the Pause light is flashing, or you may damage the printer.

**Caution:** To avoid feeding excess paper, make sure you don’t select when you’re using roll paper.

5. Press the Paper Source button until the or icon appears on the LCD display.
6. Feed the paper into the slot and pull it all the way through.

Note: Make sure the paper is straight, within 1 in. of the horizontal line, and the edge is cut straight across. If the edge is not straight, press the button until the icon appears on the LCD, then press and hold the button to cut the edge before printing.

7. Holding the bottom edge of the paper, turn the roll back to remove any slack. Then align the bottom edge with the horizontal line.
8. Move the paper lever to the locked position, then close the roll paper cover.

9. Press the Pause button (or wait for 5 seconds). The paper feeds into printing position automatically.

10. When you see a question on the display about the type of media you want to use, select Yes if the media is correct, or select No, then change the setting and press .

**Removing Paper from the Spindle**

1. Make sure the printer is turned on, and the Pause light is not flashing.

2. Open the roll paper cover, then release the paper lever. If the media tracking system is set up to scan the barcode when you load paper, the paper lever will be locked. Press and hold the button for 3 seconds to unlock the paper lever.
3. Wind up the paper and roll it onto the rails.

4. Have two people lift the paper out of the printer and place it on a flat surface.

5. Hold the black paper stop as shown and remove it from the spindle. If necessary, lightly tap the spindle to loosen the paper stop.

6. Remove the roll paper from the spindle.

WARNING: Make sure you have two people lift the roll, handling it by the paper stops at both ends.

Caution: Do not strike the paper stop on the floor to remove the paper, or the spindle might be damaged.

After rewinding the roll, carefully place it in the bag and box that it came in.
Cutting Paper Manually

When you’re not using the auto cut setting, you may need to cut the paper manually by pressing the button after your print job is finished. You can use the ▶ button to cut most types of paper. However, if you’re printing on fine art paper, canvas, or other heavy media, you should use a matte knife or scissors rather than the built-in cutter.

See page 49 for a list of media that should not be used with the built-in cutter.

Follow these steps to cut manually with the built-in cutter:

1. Before you print, press ▶ until you see the □ icon on the LCD display.
2. Run your print job.
3. If necessary, adjust the cutting position by pressing the ▲ or ▼ Paper Feed buttons.
4. Press ▶ until you see the □ ▶ icon on the LCD display.
5. Press and hold the ▶ button for 3 seconds. The paper is cut.

If you can’t use the built-in cutter, follow these steps to cut the paper with a matte knife:

1. Make sure you have selected the correct (non-cuttable) paper type on the printer’s control panel.
2. Before you print, press ▶ until you see the □ icon on the LCD display.
3. Run your print job.
4. Press and hold ▶ for 3 seconds to feed the paper to the manual cutting position.
5. Use a matte knife to cut the paper by running it along the groove on the front cover.

6. Press the Pause button to return to the READY state.

**Printing Trim Lines**

You can print trim lines on the bottom edge of your pages.

1. Press Menu.
2. Press to select PRINTER SETUP.
3. Press to select PAGE LINE, then press.
4. Select ON.
5. Press the button to save the setting. An asterisk appears next to ON.
6. Press the Pause button to exit the menu.

You can also specify trim lines from your printer driver software. For instructions, see page 91 (Mac OS X) or page 110 (Windows).
Using the Auto Take-up Reel

The auto take-up reel safely winds up roll media output, allowing you to produce large print runs unattended. You can wind the media either forward or backward (to uncurl it), as shown:

Winding Paper Forward

1. Set the paper guides to the forward position.

2. Make sure the green and orange sensor lights are on.
If the lights are off, the light emitter and light detector might not be aligned correctly, or something might be blocking the signal. If necessary, adjust the light emitter, then turn the dial to lock its position.

3. Press ▼ to select ☐.

4. Align the edge of the paper with the horizontal line. If you’re using the automatic media tracking system, the barcode is scanned.

5. Press ▼ to feed the paper.

6. Use three pieces of tape to attach the paper to the take-up reel core.

7. Press ▼ to feed the paper and create some slack.
8. Hold down the Auto Forward button on the control panel to rotate the take-up reel and wind a small length of paper. Make sure there is enough slack between the paper and the take-up reel core.

9. When you’re ready to print, make sure Auto Cut is set to Off in the printer driver.

10. Press the Auto Forward button on the control panel, then send your print job to the printer.

**Winding Paper Backward**

1. Set the paper guides to the vertical position.

2. **Press** to select  

3. Align the edge of the paper with the horizontal line. If you’re using the automatic media tracking system, the barcode is scanned.
4. Press ▼ to feed the paper.

5. Pull the paper around the back of the take-up reel core and use three pieces of tape to attach the paper to the core.

6. Press ▼ to feed the paper and create some slack.

7. Hold down the Auto Backward button on the control panel to rotate the take-up reel and wind a small length of paper. Make sure there is enough slack between the paper and the take-up reel core.

8. When you’re ready to print, make sure Auto Cut is set to Off in the printer driver.

9. Press the Auto Backward button on the control panel, then send your print job to the printer.
Removing Paper from the Take-up Reel

1. Press \downarrow on the control panel to select \textcircled{8}.

2. Press and hold \downarrow for three seconds to cut the paper.
   If the media is too thick to cut with the built-in cutter, cut it manually following the instructions on page 60.

3. Support the take-up reel core with one hand to keep it from falling. Then turn the lever to unlock the movable unit and slide it out to the left.

4. Remove the printed media and core. If a large amount of paper has been printed, two people may be required to lift the media and core.

5. To reinstall the core after you remove the printed media, see page 29.
Installing a 2-inch Take-up Reel Core

You can use a 2-inch roll paper core (after the paper is used up) in the auto take-up reel. First you need to reverse the paper stops.

1. Remove the paper stop from the drive unit by pinching the clips.

2. Reverse the paper stop so that the smaller knob is on the outside. Then pinch the clip and reinstall the paper stop on the drive unit.
3. Remove the paper stop from the movable unit by pinching the knob.

4. Reverse the paper stop so that the smaller knob is on the outside. Then pinch the knob and reinstall the paper stop on the movable unit.

**Using Cut Sheet Paper**

You can print on many types of cut sheet paper and other media. The printer accepts sheets ranging from letter size to 64 inches wide.

You can leave your roll paper on the spindle when you print on cut sheets; make sure it is removed from the paper path and rolled up.

If you’re using stock thicker than 19 mil (0.5 mm), load it as described on page 72.

If you’re loading small sheets or fine art paper, see page 71.
Loading Cut Sheets

Follow these steps to load cut sheet paper.

1. Make sure the printer is on and the roll paper cover is closed.

2. Press \[ \text{ until } \text{ appears on the LCD display.} \]

3. Make sure the Paper Check light is on, then release the paper lever. If the paper lever is locked, press and hold the \[ \text{ button for 3 seconds to print the barcode and unlock the paper lever.} \]

**Tip:** You can also load cut sheet paper without releasing the paper lever. This method is recommended for small sheets or fine art paper.
4. Feed the sheet into the paper slot. Make sure the right and bottom edges of the paper are straight and aligned with the horizontal and vertical lines on the printer.

5. Push the paper lever back to the secured position.

6. Press the Pause button. The sheet feeds into printing position automatically.

7. When you see a question on the display about the type of media you want to use, select Yes if the media is correct, or select No, then change the setting and press .

8. Print your page. After it is finished, the sheet stays in the printer.

9. To remove your print, press the button or release the paper lever while holding the printed sheet.

Note: For heavy paper, you may need to increase the suction by pressing the button. This helps hold the paper in place during loading and printing.

For lightweight paper, decrease the suction by pressing the button.

Caution: To avoid damaging the printer, never move the paper lever during printing, or while the Pause light is flashing.
Loading Small Cut Sheets or Fine Art Paper

You can load paper without releasing the paper lever. This prevents scratching that might damage fine art paper, and is also easier, especially when you are loading small sheets.

1. Make sure the printer is on and the roll paper cover is closed.
2. Press ◀️ until ☐ appears on the LCD display.
3. Make sure the paper lever is in the locked position.
4. Feed the sheet into the paper slot until it stops. Make sure the right edge of the paper is straight and aligned with the scale on the roll paper cover.
5. Press the H Pause button. The sheet feeds into printing position automatically.
6. When you see a question on the display about the type of media you want to use, select Yes if the media is correct, or select No, then change the setting and press ■.
7. Print your page. After it is finished, the sheet stays in the printer.
8. To remove your print, press the ▼ button or release the paper lever while holding the printed sheet.
Printing on Posterboard

You can print on Epson Enhanced Matte Posterboard or other heavy stock up to 40 × 60 inches. Follow these instructions when you print on posterboard or other media more than 19 mil (0.5 mm) thick.

1. Make sure no other paper is loaded for printing. You can leave roll paper on the spindle, but make sure you wind it up fully and close the roll paper cover.

2. Press \[\text{\text{previous}}\] until \[\text{\text{paper to load}}\] appears on the LCD display.

3. Make sure the Paper Check light is on, then release the paper lever. If the paper lever is locked, press and hold the \[\text{\text{unlock}}\] button for 3 seconds to print the barcode and unlock the paper lever.

4. Open the front cover. (The cover has a lip that acts as a paper support.)

5. Feed the posterboard into the paper slot until it meets resistance.
6. Align the board with the scale on the roll paper cover.

![Diagram of aligning board](image)

7. Push the paper lever back, to the locked position. Then close the front cover.

![Diagram of pushing paper lever and closing front cover](image)

8. Press the Pause button. The board feeds into printing position automatically.

9. When you see a question on the display about the type of media you want to use, select Yes if the media is correct, or select No, then change the setting and press .

10. Print your page. After it is finished, the posterboard stays in the printer.

11. To remove the print, hold it while releasing the paper lever.
Adjusting the Platen Gap for Thick or Thin Paper

When you print on unusually thick or thin paper, you may need to adjust the platen gap setting. **STANDARD** is the default setting. However, if print quality is not satisfactory when using very thin or very thick stock, you may need to change this setting.

1. Press ▶ Menu.

2. Press ▶ again to select the Printer Setup menu and highlight **PLATEN GAP**.

3. Press ▶ again. **STANDARD** is highlighted as the current setting.

4. Use the ▲ and ▼ buttons to change the setting. (**STANDARD** is the default setting; you can also choose **NARROW**, **WIDE**, **WIDER**, or **WIDEST**.)

5. Press the ◀ button to save the setting. An asterisk appears next to the selected setting.

6. Press the Pause button to exit the menu mode.

If you’ve selected a non-standard platen gap, the following symbols appear in the corner of the display to remind you of the narrow or wide setting:

- \( \text{PGW} \) Widest
- \( \text{PGO} \) Wider
- \( \text{PGS} \) Wide
- \( \text{PGN} \) Narrow

When you switch media, don’t forget to change the setting back to **STANDARD**.

If you’re printing on non-Epson media and not using the Epson driver, you may also need to create a paper configuration to optimize your results. See page 75 for more information.

**Note:** If you notice head strikes on your prints, make sure your paper is flat. If so, try changing the platen gap setting to **WIDE**. If that doesn’t solve the problem, try changing it to **WIDER**.

**Caution:** To avoid damaging the printer, make sure you do not select the **Narrow** setting when you print on thick media.
Optimizing the Settings for Your Paper

When you choose a media type in your Epson printer software, the driver automatically determines the best settings for your paper. However, you may want to fine-tune how the printer handles various media—especially if you use non-Epson paper or a paper not supported by the driver.

You can create a special configuration, or group of settings, for each paper type (up to ten types) and select the desired configuration whenever you print on a particular stock.

Creating Custom Paper Configurations

To create a configuration for a specific paper type, make sure the paper you want to configure is loaded in the printer. Then follow these steps:

1. Press ➤ Menu, then press ▲ or ▼ to select PAPER SETUP.
2. Press ➤, then press ▼ to select CUSTOM PAPER.
3. Press ▼ or ▲ to select a paper configuration number (1 to 10). Press ➤ to save the number setting.
4. Press ▼ or ▲ to select PAPER TYPE, then press ➤. Press ▼ or ▲ to select a media type, then press ◄ to save it. Press ◄ to go back to the previous menu.
5. Press ▼ or ▲ to select PLATEN GAP, then press ➤. Press the ▼ button to select NARROW, STANDARD, WIDE, or WIDER. The STANDARD setting is recommended for most paper types. Press ◄ to save the setting, then press ◄ to go back to the previous menu.
6. Press ▼ or ▲ to select THICKNESS PATTERN, then press ➤. Press ◄ to print the paper thickness pattern. A pattern similar to the following is printed:

   ![Standard thickness pattern](image)

**Note:** Paper configurations are needed only for non-Epson media.
7. Examine the printed pattern for the most evenly overlapping lines. Choose the number with the most even lines. In the example shown above, the lines under number 4 are the most even.

After printing the pattern, **THICKNESS NUMBER** is highlighted.

8. Press ▼ or ▲ to select the number that you noted in step 7, then press ●.

9. Press ◀, then ▼ for the menu options shown below. Make any adjustments, as needed, and press ● to save each setting.

You can also make similar settings using the printer driver software. For instructions, see page 88 (Mac OS X) or page 115 (Windows).

- **CUT METHOD** lets you decrease the cutting blade pressure for thinner media, or adjust the speed for thick media. You may need to experiment to determine the cleanest cut for your paper.

- **PPR FEED ADJUSTMENT** helps eliminate banding. Choose a lower value if you see white lines on your prints, or a higher value if you see dark lines.

- **DRYING TIME** lets you print with non-Epson media and avoid smearing the ink. You can make the print head wait up to 10 seconds after each pass to allow ink to dry on the page.

- **PAPER SUCTION** lets you decrease the paper suction level when printing on thin media (under 12 lb), such as drafting paper or backlight film.

10. When done, press the ■ Pause button.

After you create paper configurations, you can use the **TEST PRINT** menu to print out a list of paper numbers showing the settings for each one.
Printing Your Paper Configurations

You can print a list showing the settings for all your paper configurations. This makes it easy to select the configuration you want for a particular type of paper.

1. Press ▶ Menu, then press ▼ to select TEST PRINT. Press ▶ again.
2. Press ▼ to select CUSTOM PAPER, then press ▶.
3. Press ← to print your custom paper configurations.

Selecting Paper Configurations

Once you have created a paper configuration, you can select it whenever you print on that paper:

1. Press ▶ Menu, then press ▲ or ▼ to select PAPER SETUP.
2. Press ▶, then press ▼ to select CUSTOM PAPER, then press ▶.
3. Press ▶ to select the paper type.
4. Press ▼ to select CUSTOM PAPER.
5. Press ▲ or ▼ to select the configuration number that you want to use.
6. Press ←. The configuration number you selected is displayed on the LCD with an asterisk.
7. Press the ▼ Pause button to exit the menu.
Your Epson Stylus Pro 11880 comes with drivers and utilities that let you print and manage print jobs. For the best black and white photography output, the Epson driver offers an Advanced Black and White Photo mode.

ICC profiles for ColorSync® are included, so you can use color management features in Adobe® Photoshop® or other applications, or in the driver itself. A color-managed workflow using Photoshop and a color-calibrated monitor will give you the most accurate colors and best output from your printer for color photos.

You can create your own profiles if you have the required hardware and software, or you can have them created by a color specialist. Make sure any profiles you want to use are located in the standard folder for your operating system. When you install the Epson printer driver, the ready-made profiles are automatically copied to the right folder.

Before you print, make sure you have installed the Epson printer driver and utilities from the CD-ROM. You also need to configure your connection and set up the printer in the Printer Setup Utility. For instructions on installing and configuring the printer driver, see page 37.

This chapter includes the following information for Mac OS X:

- Choosing page setup settings for cut sheets and roll paper
- Choosing basic print options
- Selecting the correct Media Type setting
- Choosing advanced print options, including color management and paper configuration settings
- Choosing roll paper options
- Choosing advanced black and white photo settings
- Creating a custom preset and printing
- Managing print jobs
- Checking printer status

Tip: Check the Epson Pro Imaging website at www.proimaging.epson.com for updated drivers and utilities that may become available.
Note: Many application settings override the printer’s page setup options. Always verify settings to get the results you expect. If you need more information about print options, click the Help button.

Choosing Page Setup Options

Page Setup options let you choose from several options for printing on cut sheets or roll paper. You can also select the orientation of your image and the paper size. For printing on roll media, creating a custom page size is recommended to make the best use of your paper.

1. Open the file you want to print and select Page Setup in your application. You see this screen:

   ![Page Setup window](image)

   Select your printer

2. Open the Format for drop-down menu and select your printer.

   Note the following limitations on borderless printing:
   - Borderless printing takes longer than normal printing.
   - Margins are required at the top and bottom of the page on cut sheets. Full borderless printing is available on roll paper only.

   ![Page Setup window](image)

   Note: If your application has margin settings, make sure they’re turned off for borderless printing.
3. Click the **Paper Size** drop-down menu.

- If you’re printing on a cut sheet, choose the size of the paper you are using and one of the options listed below. Then continue with step 7.

- If you’re using roll paper, Epson recommends that you create a custom paper size to make the best use of your paper (see page 82 for instructions).

The following settings are available, depending on the size you choose:

- The **Sheet** setting prints on cut sheet paper with a bottom margin larger than the top and sides.

- **Sheet - Borderless (Auto Expand)** prints on cut sheets and enlarges your image (up to 3%) to fit the width of the paper (without side borders).

- **Sheet - Borderless (Retain Size)** prints your image at the size you specify in your application. You need to size it slightly wider than the paper width to print without side borders.

- **Roll Paper - Banner** prints a series of continuous images without any margin space between them, but with normal side borders.
3-82

Printing with Epson Drivers for Macintosh

- **Roll Paper - Borderless (Auto Expand)** prints without borders on roll paper and enlarges your image (up to 3%) to fit the size of the paper. This selection is recommended for borderless printing with minimal clipping of your image. See page 91 for more information.

- **Roll Paper - Borderless (Retain Size)** prints your image on roll paper at the size you specify in your application. You need to size it slightly wider than the paper width to print without borders. See page 91 for more information.

- **Roll Paper - Borderless Banner** prints a series of continuous borderless images without space between them.

- **Roll Paper** prints on roll paper with the standard printable area.

4. If you are printing on roll paper, choose Manage Custom Sizes from the Paper Size menu. (If you are printing on a cut sheet, skip to step 7.)

5. Click the + (plus sign), give your paper size a name, and define its size and margins. Then click OK.

6. Select your new paper size from the Paper Size drop-down menu.

7. Choose the appropriate Orientation and Scale for printing.

8. Click OK. Then continue with the instructions in the next section.

**Note:** If you’re printing on roll paper, make sure you set the bottom margin to 0.56 inch or less. To center your image on the page, make the top and bottom margins the same.
Choosing Basic Print Options

Once you have selected your page setup options, you need to select printing options. The Epson driver offers automatic settings that optimize print quality and speed when you’re using Epson media. You can also choose advanced settings for more control over your printer and color management options, as described on page 87.

1. Select Print in your application. You see the screen shown below:

2. Choose your printer from the Printer menu.

3. Select Print Settings from the Copies & Pages drop-down menu.
You see this screen:

4. Select the Media Type that corresponds to the paper you are printing on. See the table on page 86 for more information.

   If you are using a color-managed workflow, make sure you choose media type and resolution settings that match the ICC profile you are using.

5. If the media you are using supports both photo black and matte black ink, select the one you want to use.

6. For the Color setting, select Color for any type of photographic printing. Choose Advanced B&W Photo if you are printing black and white photos using this unique printer technology on select paper types. See page 93 for more information. (For paper types that don’t support this option, print black and white photos with the Color setting.)
7. Set the **Mode** option as follows:

- Click **Automatic** to have the printer driver analyze the contents of your image or file and make the appropriate printing adjustments.

You can choose one of the mode settings shown at the left in the drop-down menu:

- The **Charts and Graphs** setting intensifies colors and lightens the midtones and highlights of an image. Use this setting for presentation graphics.
- The **EPSON Standard (sRGB)** setting increases the contrast in images. Use this setting for color photographs.
- The **Adobe RGB** setting matches image colors to the Adobe RGB color standard.
- Click **Advanced Settings** to access additional options, as described below.

8. Choose one of the following **Print Quality** settings:

- **Draft**
- **Normal - 360dpi**
- **Fine - 720dpi**
- **SuperFine - 1440dpi**
- **SuperPhoto - 2880dpi**

9. Choose any of the following:

- **Super MicroWeave®** for maximum elimination of banding.
- **High Speed** for fast, bidirectional printing. For higher quality, make sure you deselect this option.
- **Flip Horizontal** for printing a mirror image of your file.
- **Finest Detail** for sharper edges on vector-based data including text, graphics, and line art. (This setting does not affect photographs and is not recommended for large files.)

Continue with the instructions on page 87 to select color management settings. If you are using the color management settings in Photoshop or another application, it is very important to turn off color management in the printer driver, as described on page 88.

**Note:** The Print Quality settings available depend on the Media Type you selected. Choose lower print quality for faster printing, or **SuperPhoto - 2880dpi** for best quality.
Selecting the Correct Media Type Setting

The table below lists the settings designed to produce the best results on Epson media.

If your paper is not listed, check the instructions included with the paper, or look on the Epson website (www.proimaging.epson.com). If you are using non-Epson paper, consult the manufacturer for the best setting. You may have to experiment with different settings to determine which one is best for the media you’re using.

### Choosing Printer Color Management Options

Follow these instructions to use color management in the printer driver.

1. Select **Printer Color Management** from the drop-down menu, then click **Advanced Settings**. You see this screen:

<table>
<thead>
<tr>
<th>For this media</th>
<th>Select this Media Type setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Watercolor Paper - Radiant White</td>

</tr>
<tr>
<td>Enhanced Adhesive Synthetic Paper</td>
<td>Synthetic Paper</td>
</tr>
<tr>
<td>Enhanced Matte Posterboard</td>
<td>Enhanced Matte Posterboard</td>
</tr>
</tbody>
</table>
2. Select one of the following settings:

- **Color Controls** to choose from three Color Adjustment modes and from two Gamma settings. Click the arrow next to **Advanced Settings** to specify individual values for brightness, contrast, saturation, and CMY inks. When you use the driver to perform color management, make sure you turn it off in your application.

- **ColorSync** for mapping colors to your printer’s profile. In most cases, you will get better results by applying color management in your application, rather than in the printer driver. If you choose this setting, you can choose ColorSync from the drop-down menu and choose filters or other settings.

- **(Off) No Color Adjustment** to disable color management in the printer driver. Choose this mode when you use a color-managed ICC workflow in Photoshop or other software applications.

### Choosing Paper Configuration Options

Follow these instructions if you are using non-Epson media and you need to fine-tune its performance.

1. Select **Paper Configuration** from the drop-down menu. You see this screen:

   ![Paper Configuration Screen](image)

   **Note:** You may need to change the Color Density setting if your custom color profile was created to optimize D-max and color gamut.
2. Select the correct settings to match your ICC profile. These settings override any paper configuration settings you may have made using the printer’s control panel.

- **Color Density** lets you control the ink saturation level.
- **Drying Time per Print Head Pass** lets you print with non-Epson media and avoid smearing the ink. You can make the print head wait up to 5 seconds after each pass to allow ink to dry on the page.
- **Paper Feed Adjustment** helps reduce banding. Choose a lower value if you see white lines on your prints, or a higher value if you see dark lines.
- **Paper Thickness** helps reduce vertical banding and creates a sharper image when printing on unusually thick or thin paper.
- **Paper Suction** lets you decrease the paper suction level when printing on thinner papers (less than 12 lb), such as CAD drafting paper.
- **Cut Method** decreases the cutting blade pressure for thinner media, or adjusts the speed for thick media. You may need to experiment to determine the best setting for your paper.
- **Platen Gap** lets you fine-tune the setting for various paper thicknesses.
Choosing Roll Paper Options

If you are printing on roll paper, make sure you choose one of the roll paper options as the Paper Size setting, as described on page 80. In addition, you need to check these settings for various cutting and feeding options.

1. Select Roll Paper Option from the drop-down menu. You see this screen:

2. Choose one of the following Auto Cut settings:

- **Normal Cut** allows margin space at the top and bottom of each image.
- **Double Cut** extends the space between the images and trims each print individually. This provides the cleanest edge for borderless printing.
- **Single Cut** causes the images to be printed end-to-end and saves paper (when you are printing multiple images). With borderless printing, you may see a sliver of the previous or next image. You will see a white margin between print jobs.
- **Off** disables automatic cutting. Choose this setting if you want to operate the cutter manually, use the auto take-up reel, or if you are printing on heavy media that must be cut by hand.

See page 60 for instructions on using the button to operate the cutter. See page 49 for a list of media that are not recommended for use with the built-in cutter.
3. Select either of the following options:

- **Print Page Line** prints trim lines on the right and bottom edges of your pages.
- **Save Roll Paper** saves paper by not feeding the blank portion of the last page of your document. Available only when you’ve selected Roll Paper (Banner) as the Paper Source.

### Borderless Printing

For true borderless printing on roll paper, you can select either **Auto Expand** or **Retain Size** and create a custom paper size, as described on page 82. Your image may be clipped on the left and right edges, but you can minimize clipping by sizing your image according to the page width and by adjusting the length.

For either setting, you should add 0.1 inch to the length of your custom size.

The Auto Expand setting provides the best solution for borderless printing with minimal image clipping. Using this setting, you can create a custom paper width equal to the width of the roll media. If you use the Retain Size setting, your image width should be slightly wider than the custom page size.

The following table shows recommended image widths (in inches) for borderless printing using either the Auto Expand (Standard) or Retain Size setting:

<table>
<thead>
<tr>
<th>Roll paper width</th>
<th>Image width (with Auto Expand)</th>
<th>Image width (with Retain Size)</th>
<th>Custom Paper Size (for Retain Size only)</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>9.7075</td>
<td>10.34</td>
<td>10.23</td>
</tr>
<tr>
<td>13</td>
<td>12.8</td>
<td>13.34</td>
<td>13.23</td>
</tr>
<tr>
<td>16</td>
<td>15.8</td>
<td>16.34</td>
<td>16.23</td>
</tr>
<tr>
<td>17</td>
<td>16.8</td>
<td>17.34</td>
<td>17.23</td>
</tr>
<tr>
<td>24</td>
<td>23.8</td>
<td>24.34</td>
<td>24.23</td>
</tr>
<tr>
<td>36</td>
<td>35.8</td>
<td>36.34</td>
<td>36.23</td>
</tr>
<tr>
<td>44</td>
<td>43.8</td>
<td>44.34</td>
<td>44.23</td>
</tr>
<tr>
<td>50</td>
<td>49.8</td>
<td>50.34</td>
<td>50.23</td>
</tr>
<tr>
<td>54</td>
<td>53.8</td>
<td>54.34</td>
<td>54.23</td>
</tr>
</tbody>
</table>

**Note:** These settings override settings made through the control panel.
Make sure you set the margins to zero when printing a custom page size for borderless printing.

To control the amount of expansion (with the Auto Expand setting), select Expansion from the drop-down menu. You see this screen:

Adjust the slider to increase or decrease the amount of expansion.

The widths shown in the table on page 91 work with the Standard Expansion setting.

- Use the Min setting to minimize the amount of image clipping. You may see a white border around your image.
- Use the Max setting to maximize the image width. This will increase the amount of image clipping.
Controlling Image Processing

To make sure the printer runs at the maximum speed, halftone processing takes place in the printer, rather than on your computer. This involves image compression and decompression, and does not affect the quality of your output. You can turn off this feature if you want.

1. Select **Extension Settings** from the drop-down menu.

2. Uncheck **Processed by Printer** if you want to turn off halftone processing in the printer.

Choosing Advanced Black and White Photo Settings

Advanced Black and White Photo mode allows you to easily produce neutral and toned black-and-white prints using your Epson driver. This mode offers an alternative black and white workflow with settings for more advanced control.

Whether your photo is color or grayscale, you can use this unique screening and color management technology to create stunning black-and-white prints. This mode is only available when printing on certain media types.
1. Select **Print Settings** from the drop-down menu. You see this screen:

![Print Settings Screen](image)

2. Choose the Media Type setting for the paper you have loaded in the printer.

3. Choose **Advanced B&W Photo** as the Color setting.

4. Uncheck **High Speed** for the best quality.

**Note:** If you are printing from Photoshop, make sure you do not use Photoshop’s color management settings when using Advanced Black and White Photo mode. There are no profiles associated with this screening and color management technology.
5. Select **Printer Color Management** from the drop-down menu. You see this screen:

6. Choose the settings that are best for your photo. You can use the photo on the screen as a guide.

   - **Color Toning** allows you to add tone (hue) to your black and white output. The default is Neutral, which will provide you with a neutral tonal scale print. You can also choose other popular presets such as Cool, Warm, and Sepia. Note that the presets will affect the target found in the tone color circle.

   - **Tone** allows you to easily change the entire tonal scale of your black and white output. While **Darker** is the default setting, you may see better results if you choose **Dark**.

   - **Brightness** adjusts the overall lightness and darkness of your image.

   - **Contrast** adjusts the difference between the light and dark areas of your image.

   - **Shadow** and **Highlight Tonality** allow you to control tonality only in the shadow or highlight areas of your image.
- **Max Optical Density** adjusts the overall density or focus of the print. Create a soft focus print by setting the density lower.
- **Highlight Point Shift** helps to reduce gloss differential by adding density to the highlights of your image.
- The tone color circle adjusts the hue of your black and white print. Click on any portion of the color wheel or enter corresponding values to customize the tone (hue) to add to your print. The closer you select to the edge of the wheel, the more color you will add.
- The preview approximates the image tone based on your settings. Note that this preview always shows the same image and is not color managed. It provides a level of feedback as you make changes.

### Creating a Custom Preset and Printing

Once you’ve made the correct settings for your print job, you can create a custom preset. This will save you time when you use the same profile/printer/ink/media combination for future print jobs.

1. Select **Summary** from the drop-down menu.
2. After verifying that your settings are correct, select **Save As** from the Presets drop-down menu.

**Note:** If you check the settings on each screen in the drop-down menu, go through them carefully from top to bottom. Avoid cycling through them repeatedly, or you may lose your settings.
3. Type a name, and click OK.

4. When you’re ready to print, click the Print button.

Managing Print Jobs

After you click Print, you can monitor the progress of your print job. Follow these steps:

1. Click the icon for your printer on the Dock. If necessary, double-click your printer (print queue) name. You see a screen like this:

![Screen showing print job status]

2. From here you can monitor the progress of your print job or do one of the following:
   - Click the print job, then click Delete to cancel the job
   - Click the print job, then click Hold to pause printing
   - Click a print job marked “Hold” and click Resume to resume printing

3. When you’re finished, close the print job window, then close your printer window.

**Caution:** Do not open and close the Presets menu without typing a name, or you will lose your settings.

**Note:** You can also cancel a print job on the printer by pressing the Pause button on the control panel and holding it for at least 3 seconds.

**Note:** You can also cancel a print job on the printer by pressing the Pause button on the control panel and holding it for at least 3 seconds.
Checking Ink Levels and the Maintenance Tank

The Epson Printer Utility lets you check the levels of ink in the printer and the level of the maintenance tanks. You can also run maintenance utilities from this screen. See pages 128 to 129 for instructions.

1. Select **EPSON Printer Utility2** from your Applications folder, click the Utility button on the print job window, or click on the printer settings screen.

   You see the Epson Printer Utility2 menu:

   ![Epson Printer Utility2 Menu]

2. Click the **EPSON StatusMonitor** icon.
The software checks the amount of ink in the printer and maintenance tanks and displays the StatusMonitor window:

3. To recheck the ink levels, click the **Update** button.

4. To close the Status Monitor, click **OK**.
Chapter 4: Printing with Epson Drivers for Windows

Your Epson Stylus Pro 11880 comes with drivers and utilities that let you print and manage print jobs. For the best black and white photography output, the Epson printer driver offers Advanced Black and White Photo mode.

ICC profiles are included, so you can use the color management features in Adobe Photoshop or other applications, or in the driver itself. A color-managed workflow using Photoshop and a color-calibrated monitor will give you the most accurate colors and best output from your printer for color photos.

You can create your own profiles if you have the required hardware and software, or you can have them created by a color specialist. Make sure any profiles you want to use are located in the standard folder for your operating system. When you install the Epson printer driver, the ready-made profiles are automatically copied to the right folder.

This chapter includes the following information:

- Choosing basic print options
- Selecting the correct Media Type setting
- Choosing color management settings
- Choosing roll paper options
- Choosing cut sheet options
- Choosing paper configuration options
- Choosing advanced black and white photo settings
- Customizing the printer driver
- Managing print jobs

Tip: Check the Epson Pro Imaging website at www.proimaging.epson.com for updated drivers and utilities that may become available.
Choosing Basic Print Options

Before you print, you need to set basic printing properties. Make sure you have installed the Epson driver and utilities from the CD-ROM.

The driver offers automatic settings that optimize print quality and speed when you’re using Epson media. You can also choose advanced settings for more control over your printer and color management options, as described on page 106.

Follow these steps to make basic settings:

1. Start an application, open the file you want to print, and select Print in your application. You see the Print window.

2. Make sure your printer is selected, then click the Properties button. Or, if you see a Setup, Printer, or Options button, click it instead. Then click Properties on the next screen. You see a window like the following:

   ![Printing Preferences window](image)

   **Note:** If you need more information about print options, you can click the Help button on any screen.

   This box shows you the current settings, but you can’t change them from here.
3. Select a **Media Type** setting that corresponds to the paper you are printing on. See the table on page 105 for more information.

<table>
<thead>
<tr>
<th>Media Type</th>
<th>Sample Values</th>
</tr>
</thead>
<tbody>
<tr>
<td>Photo Paper</td>
<td>Premium Luster Photo Paper (260)</td>

<td>Premium Semi-gloss Photo Paper (170)</td>
</tr>
<tr>
<td></td>
<td>Premium Luster Photo Paper</td>
</tr>
</tbody>
</table>

- If you are using a color-managed workflow, make sure you choose media type and resolution settings that match the ICC profile you are using.

- If your paper is not listed, check the instructions included with the paper, or check the Epson website (www.proimaging.epson.com). If you are using non-Epson paper, consult the manufacturer for the best setting. You may have to experiment with different settings to determine which one is best for the media you’re using.

- If you have saved custom media type configurations or set up custom paper configurations, you can select them by clicking the **Custom Settings** button. See page 114 for more information about custom paper configurations.

- If the media type has been set on the printer’s control panel, select **Auto Acquire**.

4. For the **Color** setting, select **Color** for any type of photographic printing. Choose **Advanced B&W Photo** if you are printing black and white photos on certain paper types. (For paper types that don’t support this option, print black and white photos with the **Color** setting.)

   See page 115 for more information about advanced black and white photo printing.

   If the media you are using supports both photo black and matte black ink, select the one you want to use.
5. For the Print Quality setting, choose Quality or Max Quality. Or, choose Quality Options to display a window like the following:

![Quality Options Window]

Use the Speed/Quality slider to set the desired quality level. Select from the following additional options, then click OK:

- **High Speed** for fast, bidirectional printing at lower quality.
- **Edge Smoothing** to improve the quality of low-resolution images.
- **Finest Detail** for sharper edges on vector-based data including text, graphics, and line art. (This setting does not affect photographs.)

6. Set the Mode option as follows:

- Click Automatic to have the printer driver analyze the contents of your image or file and make the appropriate printing adjustments.

You can choose one of these settings in the drop-down menu:

- The **Charts and Graphs** setting intensifies colors and lightens the midtones and highlights of an image. Use this setting for presentation graphics.

- The **EPSON Standard (sRGB)** setting increases the contrast in images. Use this setting for color photographs.

- The **Adobe RGB** setting matches image colors to the Adobe RGB color standard.

- Click Custom, then follow the instructions in the next section to set color management options.
Selecting the Correct Media Type Setting

The table below lists the settings designed to produce the best results on Epson media.

If your paper is not listed, check the instructions included with the paper, or look on the Epson website (www.proimaging.epson.com). If you are using non-Epson paper, consult the manufacturer for the best setting. You may have to experiment with different settings to determine which one is best for the media you’re using.

Choosing Printer Color Management Options

If you are using color management settings in Photoshop or another application, it is very important to access the advanced settings and turn off color management in the printer driver, as described on page 107.

1. On the properties window, make sure the Main tab is selected.

2. For the Mode setting, select Custom.

3. Choose one of the following and click the Advanced button:
   - Color Controls lets you specify individual values for adjusting brightness, contrast, saturation, and CMY inks, or choose from the three Printer Color Adjustment modes. You can also choose from two Gamma settings, and use either a color circle or slide bar to adjust color.

![Color Controls](image-url)
• **PhotoEnhance** allows you to automatically correct images and choose from six Scene Correction settings.

![PhotoEnhance Settings](image)

**Tip:** If you turn off color management, you can still control the ink density, as described on page 115.

• **Off (No Color Adjustment)** disables color management in the printer driver. Choose this mode when you use a color managed workflow in Photoshop or other software.

• **ICM** adjusts colors based on the printer’s ICC profile, using the Image Color Matching system. You can choose the input profile and other settings as shown below:

![ICM Settings](image)

In most cases, you will get better results by applying color management in your application, rather than in the printer driver.

4. Click **OK** to save your settings.
Choosing Roll Paper Options

Follow these steps to print on roll paper and select settings for borderless printing and automatic cutting:

1. On the Properties window, make sure the Main tab is selected.

2. For the Source setting, select Roll Paper or Roll Paper (Banner).

   The Roll Paper (Banner) setting allows you to print a series of continuous images without any margin space between them. This option is not available with all applications, and is mostly for tiling an image.

   Save Roll Paper saves paper by not feeding the blank portion of the last page of your document. Available only if you’ve selected Roll Paper (Banner) as the Paper Source.

3. For the Size setting, select the size of your image or output paper size.

   To make the best use of your roll paper, creating a custom paper size is recommended. Click User Defined. You see this window:

   Type a name for your custom size, then enter the size in hundredths of an inch (or centimeters) and click Save. Then click OK.

4. If you want to reduce or enlarge your image, click the Page Layout tab. See page 113 for more information.

Note: Many application settings override settings in the printer driver. Always verify settings to get the results you expect.

Tip: Creating a user-defined paper size generally lets you make the best use of your roll paper.
5. If you want to print without margins, click **Borderless**. Note that borderless printing takes longer than normal printing. See page 110 for more information about borderless printing.

Click the **Expansion** button to select a borderless sizing option. Choose **Auto Expand** or **Retain Size**, then click **OK**:

- **Auto Expand** enlarges your image (up to 3%) to fit the size of the paper. You can use the slider to adjust the expansion. Choose **Min** for the least amount of image expansion (with a chance that there will be small borders around the edges) or **Max** for the greatest amount of expansion (some of the image will be cut off around the edges, but it will extend to the edge of the paper).

- **Retain Size** prints your image at the size you specify in your application. You need to size it slightly wider than the paper width if you want to print without borders.

See page 110 for more information about borderless printing.

6. Click **Roll Paper Option**. You see the following window:
7. Choose one of the following Auto Cut settings (for borderless printing):
   - **Off** disables automatic cutting. Choose this setting if you want to operate the cutter manually, use the auto take-up reel, or print on heavy media that must be cut by hand. See page 60 for instructions on operating the cutter manually.
   - **Single Cut** causes the images to be printed end-to-end and saves paper (when you are printing multiple images). With borderless printing, you may see a sliver of the previous or next image. You will see a white margin between print jobs.
   - **Normal Cut** allows margin space at the top and bottom of each image.
   - **Double Cut** extends the space between images and trims each print individually. This provides the cleanest edge for borderless printing.

8. Select these additional roll paper options if necessary:
   - **Auto Rotate** saves paper if your document length is shorter than the printable width of the roll. The document is automatically rotated 90 degrees and printed crosswise. Be sure to click Roll Width and select the width of your roll paper.
   - **Print Page Line** prints trim lines on the right and bottom edges of your pages.

9. When you’re finished, click OK.

**Borderless Printing**

For true borderless printing on roll paper, you can select either **Auto Expand** or **Retain Size** and create a custom paper size, as described on page 109. Your image may be clipped on the left and right edges, but you can minimize clipping by sizing your image according to the page width and by adjusting the length.

For either setting, you should add 0.1 inch to the length of your custom size.

The Auto Expand setting provides the best solution for borderless printing with minimal image clipping. Using this setting and the Retain Size setting, you can create a custom paper width equal to the width of the roll media.
The following table shows recommended image widths (in inches) for borderless printing using either the Auto Expand (Standard) or Retain Size setting:

<table>
<thead>
<tr>
<th>Roll paper width</th>
<th>Image width (with Auto Expand)</th>
<th>Image width (with Retain Size)</th>

</tr>
</tbody>
</table>

The widths shown in the table above work with the Standard Expansion setting.
Choosing Cut Sheet Paper Options

1. On the Properties window, make sure the Main tab is selected.

2. For the Source setting, select Sheet.

3. For the Size setting, select the size of the sheet loaded in the printer.

4. If you want to center your image on the sheet, click Printable Area, then select Centered.

5. If you want to print to the edges of the page, click Borderless. Note that borderless printing applies only to the left and right sides of the page on cut sheets; margins are required at the top and bottom of the page. For full-bleed borderless printing, use roll paper, as described on page 108.
Click the Expansion button and choose Auto Expand or Retain Size:

- **Auto Expand** enlarges your image (up to 3%) to fit the size of the paper. You can use the slider to control the amount of expansion.
- **Retain Size** prints your image at the size you specify in your application. You need to size it slightly wider than the paper width if you want to print without borders.

6. If you want to reduce or enlarge your image, click the Page Layout tab. See the next section for more information.

7. After making your settings, click OK.

**Choosing Page Layout Options**

You can print a poster-size image, even if your application does not support poster printing. Follow these steps to reduce or enlarge your image:

1. On the Properties window, click the Page Layout tab. You see this window:

```
Note: Select Landscape when you want to rotate your image 90°.
```

2. Make the settings you want for Orientation and Copies.
3. Click **Reduce/Enlarge** if you want to have the driver resize your image.
   You can select **Fit to Page** or select **Custom** and enter a scaling percentage or **Fit to Roll Paper Width**.

4. If you are enlarging your image beyond the limits of your application program, make sure **Optimize Enlargement** is selected. The driver will increase the image size up to 650% and decrease the output resolution to stay within the pixel limitations. Depending on the resolution of the original image and the print size, you may see reduced quality in the print.

5. Click **Print Bckg Color** if you want to print color on the background of the page, then select the color you want to use.

6. Click **Job Settings** if you want to have the time, date, and other information about your print job printed at the top or bottom of the page. Click **Details**, then select the settings you want to use.

7. Click **OK** or **Apply** when you’re finished setting Page Layout options.

### Choosing Paper Configuration Options

1. If you are using non-Epson media and you need to fine-tune its performance, click the **Paper Config** button. You see the following:

   ![Paper Configuration](image)
Select the correct settings to match your ICC profile. These settings override any paper configuration settings you may have made using the printer’s control panel.

- **Color Density** lets you control the ink saturation level (for example, when you turn off color management in your printer software).
- **Drying Time per Print Head Pass** lets you print with non-Epson media and avoid smearing the ink. You can make the print head wait up to 5 seconds after each pass to allow ink to dry.
- **Paper Feed Adjustment** helps reduce banding. Choose a lower value if you see white lines on your prints, or a higher value if you see dark lines.
- **Paper Suction** lets you decrease the paper suction level when printing on thinner papers (less than 12 lb), such as CAD drafting paper.
- **Paper Thickness** helps reduce vertical banding and creates a sharper image when printing on unusually thick or thin paper.
- **Cut Method** decreases the cutting blade pressure for thinner media, and adjusts the speed for thick media. You may need to experiment to determine the best setting for your paper.
- **Platen Gap** lets you fine-tune the setting for various paper thicknesses.

2. When you finish setting Paper Configuration options, click **OK**.

**Choosing Advanced Black and White Photo Settings**

Advanced Black and White Photo mode allows you to easily produce neutral and toned black-and-white prints using your Epson driver and offers an alternative black and white workflow. Advanced Black and White Photo mode also provides settings for more advanced black and white control.

Whether your photo is color or grayscale, you can use this unique screening and color management technology to create stunning black-and-white prints. This mode is available only when printing on certain media types.
1. On the properties window, make sure the Main tab is selected.

2. Choose the Media Type setting for your paper.

3. For the Color setting, choose Advanced B&W Photo.

4. For the Mode setting, select Custom, select Color Controls, then click Advanced.

5. You can adjust the following advanced black and white photo settings:
   
   - **Color Toning** allows you to add tone (hue) to your black and white output. The default is Neutral, which will provide you with a neutral tonal scale print. You can also choose other popular presets such as Cool, Warm, and Sepia. Note that the presets will affect the target found in the tone color circle.
   
   - **Tone** allows you to easily change the entire tonal scale of your black and white output. While Darker is the default setting, you may see better results if you choose Dark.
   
   - **Brightness** adjusts the overall lightness and darkness of your image.
   
   - **Contrast** adjusts the difference between the light and dark areas of your image.
Shadow and Highlight Tonality allow you to control tonality only in the shadow or highlight areas of your image.

Max Optical Density adjusts the overall density or focus of the print. Create a soft focus print by setting the density to lower.

Highlight Point Shift helps to reduce gloss differential by adding density to the highlights of your image.

The tone color circle click adjusts the hue of your black and white print. Click on any portion of the color wheel or enter corresponding values to customize the tone (hue) to add to your print. The closer you select to the edge of the wheel, the more color you will add.

The preview approximates the image tone based on your settings. Note that this preview always shows the same image and is not color managed. It provides a level of feedback as you make changes.

Customizing the Printer Driver

You can save groups of settings or media settings, then select them for future print jobs.

You can also add, delete, or hide items on the printer driver windows. You can export or import custom settings. This provides a convenient way to share these settings with other users.

Saving and Sharing Custom Driver Settings

Once you’ve made the correct settings for your print job, you can save them as a custom setting. This will save you time when you use the same profile/printer/ink/media combination for future print jobs.

1. Click Save/Del at the top of the screen (on the Main or Page Layout tab).
You see a window like the following:

2. After verifying that your settings are correct, enter a name for the settings, then click **Save**.
   - After you have saved your custom settings, you can select them from the **Select Settings** list.
   - To export the settings, click **Export**, then select a location and enter a file name.
   - To import settings, click **Import**, select the file you want to use, and click **Open**.

**Saving and Sharing Custom Media Settings**

You can also save and share custom media settings.

1. Adjust the Media Settings on the Main tab of the properties window.

2. Click **Custom Settings**.
You see a window like the following:

3. After verifying that your settings are correct, enter a name for the settings, then click **Save**.
   - After you have saved your custom media settings, you can select them from the **Media Type** list.
   - To export the settings, click **Export**, then select a location and enter a file name.
   - To import settings, click **Import**, select the file you want to use, and click **Open**.
Editing Printer Driver Settings

1. On the properties window, click the Utility tab, then select Menu Arrangement.

2. Select the item you want to edit. You can do the following:
   - Drag and drop the items to rearrange them
   - Add or delete groups
   - Move unused items into the Not Display group

3. When you’re finished, click Save.
Managing Print Jobs

Your printer comes with several utilities that let you check on your print jobs and cancel, pause, or restart them.

The Progress Meter opens each time you send a print job. Status Monitor 3, which appears on the taskbar when you print, lets you check the printer’s status and monitor print jobs.

Using the Progress Meter

After you send a print job, the Progress Meter window appears:

![Progress Meter Example](image)

You can use the buttons to cancel, pause, or restart your print job. You also see how much ink you have left and view printing tips.

If you don’t want the Progress Meter to appear, you can turn it off. See the following section for instructions.
Optimizing Print Speed

You can use the Speed and Progress utility to improve printing speed.

1. Click the Utility tab, then click the Speed & Progress button. You see the Speed & Progress window:

![Speed and Progress window]

**Note:** If you want to disable display of the progress meter during printing, you can click the Show Progress Meter checkbox to deselect it.

2. Select from the following options:

- **High Speed Copies** speeds up printing of multiple copies of the same document using hard disk space as a cache. If you have multiple hard drives, you can select a different drive to spool to.

- **Show Progress Meter** lets you control whether or not the Progress Meter is displayed when you send a print job.

- **Disable EPSON Status Monitor** disables the monitoring utility.

- **Always spool RAW datatype** lets you spool documents using the RAW format instead of the EMF (metafile) format. Because the RAW format requires fewer resources, printing is faster and you can avoid certain problems, such as insufficient memory or disk space.

- **Page Rendering Mode** speeds printing by rendering the entire page. Use this setting if print speed is extremely slow or the print head stops for a few minutes while printing. Printing will take longer to start.

- **Coarse Rendering** allows you to override the length or width limitations in applications (such as Photoshop) that restrict the number of pixels you can print.

- **Print as Bitmap** allows large or complex vector graphics to print faster in Adobe Acrobat® or any other non-image based application.
• **Show Mouseover Help** lets you turn off the tool tips that appear when you move your mouse over the screen.

• **Processed by Printer** lets you control halftone processing in the printer. This feature speeds up processing, especially for older computers, and ensures that the printer runs at maximum speed. This involves image compression and decompression, and does not affect the quality of your output.

3. Click **OK** to save your settings.

### Setting Monitoring Preferences

You can choose when and how you want to be notified of problems, whether you want a Status Monitor 3 icon to appear on your Windows taskbar, and whether you want to allow monitoring by other users who share the printer.

1. Click the **Utility** tab, then click the **Monitoring Preferences** button.
   
   You see the Monitoring Preferences window:

   ![Monitoring Preferences Window](image)

   2. Select the notification options you want to use if various printing events occur.
3. If you want to have the Status Monitor 3 icon appear in your Windows taskbar, click the **Shortcut Icon** checkbox. Then select the icon to use.

When the shortcut is enabled, you can simply double-click the icon to open the Status Monitor 3 window or right-click it, then select **Monitoring Preferences** in the pop-up menu.

4. Select **Allow monitoring of shared printers** if your printer is shared and you want to let other users monitor it.

5. Click **OK** to save your settings.
Chapter 5: Maintaining and Transporting the Printer

The Epson Stylus Pro 11880 requires little maintenance to keep working at its best. This chapter describes the following routine procedures:

- Checking printer status
- Checking and cleaning the print head
- Aligning the print head
- Replacing ink cartridges
- Changing the date and time
- Performing additional maintenance tasks
- Replacing the paper cutter blade
- Replacing the maintenance tanks
- Cleaning the printer
- Transporting or storing the printer

In addition to the features described in this chapter, you can also use the menu system on the printer to fine-tune a variety of printer settings. For more information, see the electronic Epson SP 11880 User's Guide on your computer or on the printer CD-ROM.
Checking Printer Status

Using the control panel, you can check the amount of ink remaining, the total number of prints, the status of your maintenance tanks, and other information. You can print out a status check or view the printer’s status on the LCD display.

Printing Status Information

The status check sheet shows some of the current default settings, the amount of ink remaining in each cartridge, the page count, and the status of various printer parts.

Follow these steps to print the status check sheet:

1. Make sure paper is loaded in the printer.
2. Press Menu.
3. Press to select TEST PRINT, then press .
4. Press to select STATUS SHEET, then press .
5. Press  to start printing.

The amount of ink left or maintenance tank capacity is indicated as follows:

- E[*****]F = 100–81% of ink or maintenance tank capacity remaining
- E[**** ]F = 80–61%
- E[*** ]F = 60–41%
- E[**  ]F = 40–21%
- E[*   ]F = 20–11%

% = less than 10% of ink or maintenance tank capacity remaining
**Viewing Status Information**

To view printer status information instead of printing it, follow these steps:

1. Press ▶ Menu.

2. Press ▼ to select PRINTER STATUS, then press ▶.

3. Do one of the following:
   - To check the firmware version, press ▶ again. When done, press ◄.
   - To check the number of pages that can be printed with each ink cartridge, press ▼ to select PRINTABLE PAGES, then press ▶. Press ▼ to view the number of pages remaining for each cartridge. When done, press ◄.
   - To check the amount of ink left, press ▼ to select INK LEVEL, then press ▶. The percentage of ink left in the first cartridge is displayed. Continue pressing ▼ to see the status of the remaining cartridges. When done, press ◄.
   - To check how much capacity the maintenance tanks have, press ▼ to select MAINTENANCE TANK, then press ▶. The percentage remaining for each tank is displayed. As the tank is filled, the percentage drops. When done, press ◄.
   - To check the amount of ink used (in milliliters) and paper used (in centimeters), press ▼ to select USAGE COUNT, then press ▶. Clear this setting with the CLEAR USAGE COUNT option.
   - To check job history, press ▼ to select JOB HISTORY, then press ▶. For the last 10 print jobs saved in the printer, you see the ink used (in milliliters) and paper used (in square centimeters). The most recent job is saved as No. 0. When done, press the ◄ button.
   - To check the total number of prints, press ▼ to select TOTAL PRINTS, then press ▶. When done, press ◄.
   - To check the EDM status of the printer, press ▼ to select EDM STATUS, then press ▶. (EDM is a future enhancement.) When done, press ◄.

4. Press the □ Pause button to exit the menu.
Checking and Cleaning the Print Head

If your printed image shows a color shift or horizontal lines, you should check the print head to see if any nozzles are clogged or deflected. Then you can run a cleaning cycle to clear the nozzles.

You can also turn on Auto Nozzle Check from the printer’s control panel. The printer will then check the nozzles periodically or before each print job and clean them if necessary.

Running the Nozzle Check and Head Cleaning Utilities

You can use your printer software to check the print head nozzles, then examine the pattern to determine whether any nozzles are clogged or deflected.

1. Make sure paper is loaded in the printer.

2. Do one of the following to access the printer utilities:
   - **Mac OS X**: Open the Epson Printer Utility2 in your Applications folder. Select your printer and click OK.
   - **Windows Vista or XP**: Click Start and select Control Panel. Select Printers or Printers and Faxes. Right-click your printer icon and select Printing Preferences. Click the Utility tab.
You see a menu like the following:

3. Select the Nozzle Check icon.

4. Follow the instructions on the screen.

5. After the pattern is printed, use at least a 30x eye loupe to examine it.
   - If the pattern looks good as shown below, the print head is clean.

   ![Nozzle Check Pattern](image)

   - If any dots or segments are missing or deflected as shown below, run a cleaning cycle from your computer or by pressing and holding the ▶ button for at least 3 seconds. Then print another nozzle check pattern to make sure the nozzles are clean.

   ![Defective Nozzle Pattern](image)

   **Caution:** Don’t run a cleaning cycle while thick media is loaded in the printer.

   - If the nozzles are still clogged after three cleaning cycles, run a power cleaning cycle as described page 131.
Using the Control Panel Menu

You can print a nozzle check from the control panel and examine it to determine whether any nozzles are clogged or deflected. Then you can run a cleaning cycle by pressing and holding the ◄ Menu button.

Follow these steps to print the nozzle check pattern.

1. Press ◄ Menu.

2. Press ◄ until TEST PRINT is selected, then press ◄. NOZZLE CHECK is selected.

3. Press ◄, then press ◄ to start printing the nozzle check pattern.

4. Follow the instructions on page 129 to examine the nozzle pattern.

Automatically Checking and Cleaning the Print Head

The printer automatically checks the nozzles and cleans them if necessary. You can specify how often you want this to happen or turn this feature off. You can also have a nozzle check pattern printed on a regular basis, so you can check it yourself.

1. Press ◄ Menu. PRINTER SETUP is selected. Press ◄ again.

2. Press ◄ until AUTO NOZZLE CHECK is selected, then press ◄.

3. Select one of the following, then press ◄:

   - **ON: PERIODICALLY**—The printer periodically checks its nozzles and runs a cleaning cycle if necessary (default).
   - **ON: EVERY JOB**—The printer automatically checks its nozzles and runs a cleaning cycle if necessary before each print job. This process uses a very small amount of ink (and no paper) and is recommended if you are running large print jobs unattended.
   - **OFF**—The printer will not perform automatic nozzle checks and cleaning cycles.

4. Press ◄, then select PRINT NOZZLE PATTERN and press ◄.
5. Select **ON: EVERY PAGE** to have the nozzle check pattern printed before each print job, or **ON: EVERY 10 PAGES** or **OFF**. These settings take effect only when you print on roll paper.

6. Press ✉️ to save the setting.

### Running a Power Cleaning Cycle

You can run a power cleaning cycle from the control panel (or from the Epson LFP Remote Panel) if the normal cleaning process is not sufficient to clear the nozzles. However, the power cycle uses a large quantity of ink, so it is recommended only as a last resort.

You can also run power cleaning for each pair of ink colors.

The cartridges need to be at least 50% full to use power cleaning. You may need to replace a low cartridge to run the cleaning cycle. After cleaning, you can reinset the old cartridge.

1. Print a nozzle check to make sure the print head needs cleaning, as described on page 130.

2. Make sure the printer is ready and the red ✂️ ink **Check** light on the printer’s control panel is not on or flashing.

3. Press ▶️ **Menu**.

4. Press ▼ until **MAINTENANCE** is selected, then press ▶️.

5. Press ▼ until **PWR CLEANING** is selected, then press ▶️. Press ✉️ to start the power cleaning.

6. When cleaning is finished and the ⏸️ Pause light stops flashing, print the nozzle check again to confirm that the head is clean.

For effective cleaning, always run a nozzle check between cycles.

If the pattern is still missing segments or has deflections after a power cleaning cycle, turn the printer off and leave it overnight, then clean the print head again the following morning with regular cleaning cycles. If you still see no improvement, contact Epson for assistance.

---

**Caution:** Don’t run a cleaning cycle while thick media is loaded in the printer.

**Note:** You must use at least a 30x eye loupe to examine the nozzle check pattern for deflected nozzles.
Aligning the Print Head

Aligning the print head is the most important thing you can do to ensure the best print quality. If banding appears on your prints, if they look grainy or blurry, or if you see misregistration or “ghosting,” you need to align the print head.

Although you can align the print head using the printer utility software, it’s also easy to align from the printer’s control panel. This will do the most thorough job in the shortest time, and it’s all automatic.

If you haven’t already done so, it’s a good idea to run a nozzle check before aligning the print head (page 130). This ensures that the print head alignment patterns print correctly.

Follow these steps to align the print head using the control panel:

1. Make sure the printer is turned on. Then load Epson Enhanced Matte paper.
2. Press  Menu.
3. Press  or  until HEAD ALIGNMENT is selected, then press . PAPER THICKNESS is selected.
4. Press , then select the paper type loaded in the printer and press .
5. Press twice to back up, then select SELECT THICKNESS and press .
   The 8 mil (0.2 mm) setting is selected by default. This is the correct setting for most Epson papers.
6. Press to save the setting.
7. Press twice, then press to highlight ALIGNMENT.
8. Press to select AUTO, then press again. UNI-D (uni-directional) is highlighted. This is the type of alignment to start with.
9. Press the button to start the alignment process.

Tip: To properly align the print head, you can also use Epson Doubleweight Matte Paper or Premium Luster Photo Paper.
Each head alignment takes about 7 minutes. The printer’s white beam sensor reads the alignment pattern and adjusts the printer automatically. Make sure you don’t open the front cover or turn off the printer during this process.

10. When the uni-directional alignment is finished, press the button until **BI-D 2-COLOR** is highlighted. Then press the button to start the bi-directional black alignment process.

11. When the bi-directional black alignment is finished, press the button until **BI-D ALL** is selected. Then press the button to start the alignment process.

12. When done, press the Pause button to exit head alignment mode.

If you want to fine-tune the automatic alignment process, you can perform a manual head alignment. For instructions, see the electronic Epson SP 11880 User’s Guide on your computer or on the printer software CD-ROM.

**Replacing Ink Cartridges**

Before you begin a large print job, you should check your ink levels. If one of your cartridges is low, you can replace it before you start. Or you can wait until the ink runs out, replace the cartridge, and then continue the job without any loss of print quality. However, it is best to replace a low ink cartridge before starting a large print job.

The easiest way to check ink levels is from the control panel LCD display. The numbers below the ink icons on the LCD display correspond to the 9 ink cartridge slots on the printer. The icons show the approximate amount of ink remaining as follows:

- **Full**
- **Half full**
- **20% or less**
- **Ink low (flashing)**
- **Ink expended**
- **Cartridge error or no cartridge**

When the red ink check light (and the ink status light) is flashing (and **INK LOW** appears on the LCD display), the indicated cartridge is almost out of ink. Make sure you have a replacement cartridge. When the lights stay on and **NOT ENOUGH INK** is displayed, the cartridge is expended. You must replace the cartridge before you can continue printing.

**Tip:** You can store partially used ink cartridges for up to 6 months. If you do so, Epson recommends covering the openings with tape.
Use the following Epson UltraChrome K3 Epson ink cartridges:

<table>

You can purchase genuine Epson ink and paper from an Epson Professional Imaging authorized reseller. To find the nearest reseller, visit www.proimaging.epson.com (U.S. sales), www.epson.ca (Canadian sales), or call 800-GO-EPSON (800-463-7766). Or you can purchase online at www.proimaging.epson.com (U.S. sales) or www.epson.ca (Canadian sales).

Before you start, make sure the printer is powered on. Then follow these steps to replace an ink cartridge:

1. Note the color of the cartridge whose icon and abbreviation is on or flashing. This is the cartridge you need to replace.

2. Press the ink cover button to unlock the ink bay, then open the cover.

**Note:** We recommend that you use genuine Epson cartridges and do not refill them. The use of other products may affect your print quality and could result in printer damage.

Cartridge yields vary considerably based on images printed, print settings, paper type, frequency of use, and temperature. For print quality, a small amount of ink remains in the cartridge after the “replace cartridge” indicator comes on.

**Caution:** Leave the low or expended cartridge in the printer until you are ready to replace it.

To prevent ink reporting errors, never replace the ink cartridges with the printer turned off.

**Note:** If the ink compartment doesn’t open when you press the button, insert the end of a paper clip in the small hole on the upper left corner.
3. Push in the expended cartridge to release it.

4. Remove the expended ink cartridge from the printer. It’s a good idea to save a set of expended cartridges so you can use them for transporting the printer, if necessary.

5. Make sure the replacement cartridge is the correct color and remove it from its package. Shake the cartridge well before installing it.

**WARNING:** Do not shake the expended cartridge, or ink may leak out. If ink gets on your hands, wash them thoroughly with soap and water. If ink gets in your eyes, flush them immediately with water.
Caution: Do not touch the green chip on the side of the cartridge. Doing so may prevent normal operation and printing. Do not touch the black parts inside the ink bay.

6. Hold the cartridge with the arrow pointing toward the printer. Then insert the cartridge into the slot until it clicks in place. Don’t force it in.

Caution: Do not remove and re-insert cartridges more often than necessary. Doing so can compromise the needle valve seal and allow air to enter the ink tubes, causing nozzle loss.

7. Close the ink cover.

Once the cartridge is installed, the printer returns to its READY state.

Changing the Date and Time

1. Press Menu.

2. Press ▼ until MAINTENANCE is selected, then press ►.

3. Press ▼ until you see CLOCK SETTING, then press ►.

4. Use the ▼, ▲, and ► buttons to set each item in the date and time, displayed in the following format: MM/DD/YY HH:MM.
5. Press  to save the setting.

**Using Maintenance Mode**

Maintenance mode allows you to make special settings and perform maintenance procedures that may be needed occasionally. You can use maintenance mode to do the following:

- Change the language or units of measurements used on the printer’s control panel menus
- Change the default pressure setting for the automatic cutter
- Run a “super strong” cleaning cycle
- Enable power on roll paper feed
- Return all of the printer’s control panel settings to their default values

Follow these steps to use maintenance mode:

1. Make sure the printer is turned off.

2. Press and hold the \( \text{Pause} \) button, then press the \( \text{Power} \) button and hold it until the printer turns on and displays **MAINTENANCE**.

3. Use the \( \text{▼} \) and \( \text{▲} \) buttons to select the settings described below. If you need to back up to the previous menu level, press \( \text{◄} \).

   - To change the language on the LCD display, press \( \text{▼} \) to select **LANGUAGE**, then press \( \text{►} \). Press \( \text{▼} \) until you see the language you want, then press \( \text{◄} \) to select it. The printer exits maintenance mode and returns to normal operation.
   - To change the units of measurement, press \( \text{▼} \) to select **UNIT**, then press \( \text{►} \). Press \( \text{▼} \) to switch from **METER** to **FEET/INCH**, then press \( \text{◄} \) to select it.
   - To change the default cutting pressure, press \( \text{▼} \) to select **CUT PRESSURE**, then press \( \text{►} \) to display 100%. Press \( \text{▼} \) to decrease the pressure, or the \( \text{▲} \) button to increase it (in 1% increments). Press \( \text{◄} \) to select the setting you want.
To run a super strong cleaning cycle, press ▼ to select SS CLEANING, then press ► to display EXEC. Press ■ to start the cleaning cycle.

To enable roll paper feeding at power-on, press ▼ to select PWR ON ROLL PPR FEED, then press ►. Press ▼ to select the setting you want, then press ■ to save it.

To return all control panel settings to their default values, press ▼ to select DEFAULT PANEL, then press ► to display EXEC. Press ■ to restore the default settings.

The CUSTOM setting is for a future enhancement.

4. To exit maintenance mode, turn off the printer by pressing the □ Power button. Press the □ Power button again to turn on the printer in the normal operating mode.

**Replacing the Paper Cutter Blade**

If you notice that your paper isn’t being cut cleanly, the cutter blade may need to be replaced. If you use the blade to cut heavy stock, you will damage the blade and need to replace it. See page 49 for a list of media that do not work with the cutter.

You can check the status of your cutter by printing the status check sheet or viewing its status on the control panel. See page 127 for instructions.

You can obtain a new cutter blade from Epson (part number C12C815291).

**Removing the Old Blade**

Make sure the printer is on, then follow these steps to remove the blade:

1. Press ► Menu.

2. Press ▼ until MAINTENANCE is selected, then press ►.

3. Select CUTTER REPLACEMENT, then press ►.

4. Press the ▼ button. The paper cutter holder moves to the replacement position.

**Caution:** Do not try to slide the carriage by hand, or you may damage the printer.
5. Open the front cover.

6. Locate the cutter assembly with a blue plastic cover on the left side of the print head.

**Caution:** To avoid damaging the printer, make sure you don’t push the side pin in too far. Do not touch the black parts inside the printer or the cables around the print head.

7. Hold down the side pin as shown and turn the latch to the right.

**WARNING:** The blade is sharp. Be careful when removing it.

8. Release the side pin carefully. The cutter pops out.
9. Carefully remove the cutter blade.

Caution: Wrap the used cutter blade and dispose of it according to local regulations.

Installing the New Cutter Blade

Remove the new blade from its package, then follow these steps to install it:

1. Insert the new cutter as shown. Make sure the spring doesn’t pop out.
2. Push down on the side pin while turning the latch to the left.

Note: The print head nozzles may dry out while you replace the cutter blade, so make sure you run a nozzle check after you are finished. See page 130 for instructions.

3. Close the front cover. The cutter moves to the home (far right) position.

Replacing the Maintenance Tanks

The maintenance tanks store ink that gets flushed from the system during the initial ink charge and manual and automatic print head cleaning. The three maintenance tanks are located on the back of the printer as shown:
When one of the tanks is almost full, the message **NOT ENOUGH CAPACITY, REPLACE THE XXX MAINTENANCE TANK** appears on the LCD display, indicating which tank is almost full. When the tank is completely full, the printer stops working and **MAINT TANK FULL** appears on the LCD, along with an indication of which tank is full.

You can check how much space remains in the maintenance tanks by viewing the gauges on the control panel, shown below. You can also check the tanks using Epson Status Monitor on your computer, using the printer’s menu (see page 127), or by printing a nozzle check sheet (see page 130).

The icons show the approximate space remaining in the tank as follows:

- **Empty**
- **Nearly full**
- **Half full**
- **Full**

**The printer will not print if one of the maintenance tanks is full. Use this replacement tank: C12C890191.**

Follow these steps to replace the tank:

1. Check the LCD display to determine which tank needs to be replaced.
2. Unpack the new maintenance tank.
3. Grasp the handle at the bottom of the maintenance tank and gently pull it straight out of the printer.

Caution: Be careful not to spill ink from the maintenance tank when removing it. Hold it upright at all times and dispose of it carefully.

4. Place the used tank in the plastic bag included with the new tank, and dispose of it properly.

5. Insert the new tank all the way into its compartment.
Cleaning the Printer

To keep your printer working at its best, clean it if it becomes soiled.

1. Make sure the printer is turned off and all its lights are off. Then unplug the power cord and disconnect the printer from your system.

2. Clean the outer case of the printer with a soft, clean cloth. If necessary, dampen the cloth with mild detergent, clean the outside of the printer, then dry it with a soft cloth. Keep the ink cartridge bays closed to prevent water from getting inside.

3. Open the front cover and use canned air or a soft, lint-free cloth to carefully clean away any dust or dirt inside the printer.

   Clean the area shown in gray below following the direction of the arrows. If necessary, dampen the cloth, clean the inside of the printer, then dry it with a soft cloth.

   **Caution:** Be careful not to touch the light gray parts (roller and ink absorption pads); otherwise, your prints may be soiled. To avoid damaging the printer, do not touch the ink tubes or the cables around the print head.

   **Caution:** Do not touch the gears inside the printer.

   To avoid damaging the components as well as the case, never use alcohol or thinners to clean the printer.

   Be careful not to get water on the printer mechanism or electronic components.

   Don’t use a hard or abrasive brush.

   Don’t spray the inside of the printer with lubricants; unsuitable oils can damage the mechanism. Contact Epson if you think the printer needs lubrication.
4. If your prints have ink on the back, carefully wipe the area shown in gray below:

5. If powdery paper dust has accumulated, use a toothpick or similar tool to remove it:
Transporting or Storing the Printer

If you are moving the printer a short distance (for example, in the same building), you can roll it on its stand (see page 148). To ship the printer a longer distance, you should repack it using the original box and packing materials. Follow the instructions below to prepare the printer for shipment.

Preparing the Printer for Shipment

1. Make sure the paper lever is in the secured position and the print head is in the home position (on the far right). This caps the print head and prevents it from drying out.

2. Press the Power button to turn off the printer.

3. Remove the following parts:
   - Power cord and interface cables
   - Roll paper spindle
   - All paper or other media
   - Auto take-up reel
   - Optional fabric-based media bin (if installed)

4. Reinstall the two metal brackets and bolts that were removed during setup, as shown below. Tighten the bolts to lock the print head.

Caution: To prevent the nozzles from drying out, do not remove the ink cartridges. To prevent printer damage, be careful not to touch the cables around the print head and the black areas inside the printer.

Tip: For more secure transportation, tape all doors and covers shut.
5. Remove the printer from the stand. First make sure the front casters are locked.

**WARNING:** Do not attempt to lift the printer with fewer than 4 people.

6. Remove the four wing nuts and lock washers securing the printer to the stand (underneath the printer). Keep them in a safe place.

7. Lift the printer using the hand grips where provided. (See the stickers located near the rear hand grips for the correct holding position.)

8. Keep the printer level while moving it. See page 148 for information about setting up the printer after transporting it.

To ship the printer a longer distance, you should repack it using the original box and packing materials.
Moving the Printer on the Stand

When you need to move the printer a short distance, such as within the same building, you can roll the printer on its casters.

1. Make sure the printer is turned off and the carriage is in the home position (on the far right). If not, turn the printer back on, wait until the carriage moves to the home position, then turn off the printer.

2. Disconnect the power cord and interface cable.

3. Remove all paper and the roll paper spindle and close the roll paper cover. Make sure the front cover is closed.

4. Unlock the front casters.

5. Carefully roll the printer to its new location. Lock the casters after moving.

Setting Up the Printer After Transportation

Setting up the printer after transporting it is almost identical to setting it up for the first time.

Keep in mind that the first time you start printing after moving the printer, the print head nozzles may be clogged—especially if the printer hasn’t been turned on for a long time. You may need to run a cleaning cycle (page 128) and realign the print head (page 132) to ensure good print quality.

If you are not using the printer on a regular basis, turn it on at least once a month and leave it on for several minutes.

If the nozzles are still clogged after three cleaning cycles, run a power cleaning cycle as described on page 131.

If you are not planning to use the printer for a long period of time, cover it with a non-static cloth to protect it from dust.

Caution: Do not roll the printer on angled or uneven surfaces.
As you use your printer, you may occasionally experience a problem. You can diagnose the problem following the guidelines in this chapter or check the FAQ at www.proimaging.epson.com. Then try the most likely solutions until the problem is fixed.

This chapter provides instructions for the following:
- Diagnosing problems
- Checking error messages and lights
- Improving print quality
- Solving operational problems
- Solving miscellaneous printing problems
- Solving paper problems, including clearing paper jams
- Uninstalling and reinstalling the printer driver

**Diagnosing Problems**

The printer includes a number of ways to help you diagnose problems:
- To identify the most common problems, check the messages and lights on the control panel. See pages 150 through 155 for more information.
- If you’re using the Epson printer driver and Status Monitor utility, check your software for error messages. See Chapter 4 or 5 for more information.
- To determine whether the problem is caused by the printer itself, print a status sheet from the control panel. See page 126 for instructions.
- Review the FAQ at www.proimaging.epson.com for possible solutions.
- If none of the suggested solutions in this chapter solve your problem, contact Epson as described under “Where To Get Help” on page 10.
Checking Error Messages and Lights

The control panel includes various lights and an LCD display to indicate the status of the printer:

When your ink or paper runs out or a problem occurs, a message appears on the LCD display, and the lights on the control panel come on or flash. The following table lists the messages in alphabetical order and includes an explanation and instructions for correcting the problem.

<table>
<thead>
<tr>

Solving Problems | 155

Improving Print Quality

You can often improve print quality by doing the following:

- Run a nozzle check and cleaning cycle. See page 128 for instructions.
- Align the print head. See page 132 for instructions.
- When you send a print job, make sure your print options are set correctly. For more information, see Chapter 3 (Macintosh) or Chapter 4 (Windows).

If none of these suggestions help, try the solutions on the following pages.

<table>
<thead>
<tr>
<th>Message</th>
<th>Explanation</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>SERVICE CALL ERROR NNNN</td>
<td>If 1133 or 1137 appear, the print head may be locked. If 3000 appears, the printer is not plugged in correctly. A serious error may have occurred.</td>
<td>Remove the brackets securing the print head; see page 31. Turn the printer off. Unplug the printer and wait 30 seconds. Then plug it in correctly and turn it back on. Try turning the printer on and off a few times. If the message remains, contact Epson as described on page 10.</td>

### Solving Problems

#### Problem: Your print appears blurry or smeared.
- Make sure the Media Type setting in the printer software is correct for the media you’re printing on.
- If you’re printing on non-Epson media, you may need to adjust the paper thickness setting, drying time, or color density. Use your printer software (page 88 for Mac OS X or page 115 for Windows) to choose the correct setting. When you’re done printing with a custom paper configuration, be sure to return the setting to standard (STD).
- Your paper doesn’t meet the required specifications or wasn’t stored in a dry, humidity-free environment. Load new paper.
- If you’re using cut sheet media, make sure the printable side is face up.
- Ink has leaked into the paper path. Wipe the paper path area of the printer with a soft, clean cloth. See page 144 for cleaning instructions.
- Turn off High Speed in your printer settings.
- The platen gap setting is too narrow. Use the control panel to change the setting to WIDE or WIDER. See page 74 for instructions.
- Run a nozzle check and cleaning cycle (see page 128).
- Make sure you don’t open the front cover during printing. This causes the carriage to stop, and may cause uneven color.

#### Problem: The bottom edge of your print is smeared.
- The paper is curled toward the printable side. Flatten the paper or curl it toward the other side.
- Make sure the Media Type setting in your printer software is correct for the media you’re printing on.
- If you’re printing on non-Epson media, you may need to adjust the paper thickness setting or drying time. Use your printer software (page 88 for Mac OS X or page 115 for Windows) to choose the correct setting. When you’re done printing with a custom paper configuration, be sure to return the setting to standard (STD).
- If printing on thick paper, the platen gap setting may be incorrect. Use the control panel to change the setting to WIDE or WIDER; see page 74.

#### Problem: The printed surface is scuffed or soiled.
- If printing on thick paper, the platen gap setting may be incorrect. Use the control panel to change the setting to WIDE or WIDER; see page 74.
Solving Operational Problems

If you can’t turn the printer on, if it stops printing unexpectedly, or if nothing prints, check the following:

- Paper is loaded correctly.
- The printer is plugged securely into a working electrical outlet that’s not controlled by a switch or timer.
- The interface cable is securely connected to the printer and your system.
- The voltage supplied by the electrical outlet matches the voltage on the printer’s rating label. If not, turn off the power and unplug the power cord immediately. Contact Epson for assistance; see page 10 for details.

If none of these suggestions help, try the solutions below.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
</table>
| The printer stops printing unexpectedly. | ➤ If the Pause light is flashing, the printer is performing a maintenance procedure or waiting for ink to dry. Check the display message and lights on the control panel. Wait until the Pause light stops flashing.  
➤ Check the display message and lights on the control panel to see if an error has occurred. Follow the instructions for the messages beginning on page 150. |
| The printer sounds as if it’s printing, but nothing prints. | ➤ Follow the instructions beginning on page 128 to clean the print head.  
➤ Try running a power cleaning cycle; see page 131.  
➤ Communication between the network and printer may have been momentarily interrupted. Check your network settings. |
| Nothing prints. | ➤ Turn off the printer and computer. Make sure the interface cable is securely plugged in. Then restart the printer and computer.  
➤ Make sure the interface cable meets the required specifications; see page 11 or 12.  
➤ The printer port setting doesn’t match the printer connection port (Windows). Right-click the icon for your printer in the Windows Control Panel, then select Properties. Click the Ports tab and make sure your printer port is selected.  
➤ Download and install the latest driver for Macintosh or Windows from the Epson website at www.proimaging.epson.com. |
# Solving Miscellaneous Printing Problems

If your printouts are not what you expected, try the suggestions below:

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
</table>
| Your print has incorrect margins. | - Check the page size or paper size settings in your application. Make sure they are within the printer’s printable area.
- Make sure the **Paper Size** and **Borderless** settings in your printer software are correct for the paper you’re using.
- Paper is loaded incorrectly. Follow the instructions in Chapter 2 to reload the paper.
- The **ROLL PAPER MARGIN** setting on the PRINTER SETUP menu may be incorrect. For best results, set the margin to 3 mm.
- Make sure your paper is stored correctly so that it doesn’t expand or contract during use. For borderless printing, make sure you use only the recommended paper. |
| Your image is inverted. | - Turn off the **Flip Horizontal** or **Mirror Image** setting in your printer software. See page 85 (Mac OS X) or page 113 (Windows) for instructions. |
| Blank paper is printed. | - Make sure your software is installed correctly and the printer is selected.
- Make sure the **Paper Size** setting in your printer software is correct for the paper you’re using.
- Make sure the **Paper Source** setting in your printer software is correct. |
| A ruled line on your print appears to shift. | - Align the print head as described on page 132. |
| The back of your print is soiled. | - Make sure **PAPER SIZE CHECK** is on in the PRINTER SETUP menu. Otherwise, the printer may print beyond the edge of the paper and soil the inside of the printer. |
| The printer continues to feed paper after you have cancelled a job. | - Press the **Pause** button on the printer to clear any print job data in the printer’s buffer. Then press and hold the **Pause** button to reset the printer. Make sure the paper source is set correctly. |
| Roll paper cannot be cut, or is not cut cleanly. | - The paper cutter blade may be dull. Follow the instructions on page 138 to replace the blade.
- The paper may be too thick to cut with the built-in cutter. Cut the paper with a matte knife. See page 49 for a list of media that cannot be used with the cutter.
- Make sure **appears on the LCD display. If not, press the ** Paper Source** button to select this setting. |
| Color ink runs out too quickly, even when using the Advanced B&W mode | - Ink for all colors is normally consumed during head cleaning. You can save ink by cleaning the heads for each pair of colors separately. Use the Maintenance menu to select **CLEAN EACH COLOR**, then select the colors. |
### Solving Paper Problems

If paper feed or paper jam problems occur frequently, try one or more of the following solutions:

- For roll paper, try adjusting the Paper Suction setting. See page 75 for more information. You can also adjust this setting through your printer driver.
- For heavy or thick media, follow the instructions on page 72 to load the media correctly.
- Make sure the paper is not folded, wrinkled, or damp.
- Make sure cut sheets are loaded in the “portrait” orientation.
- Make sure the printer’s environment falls within the required range of 59 to 77 °F (15 to 25 °C), with 40 to 60% relative humidity.
- Make sure the tension is set correctly on the roll paper spindle; see page 54. If the paper wrinkles, try using high tension.
- Make sure the paper is not too thick or too thin. See pages 47 and 166 to 168 for paper specifications.
- Make sure no foreign objects are inside the paper path.
- Make sure the printer isn’t located in a brightly lit area. The paper sensors may not operate correctly.

**Solving Paper Problems**

If paper feed or paper jam problems occur frequently, try one or more of the following solutions:

- For roll paper, try adjusting the Paper Suction setting. See page 75 for more information. You can also adjust this setting through your printer driver.
- For heavy or thick media, follow the instructions on page 72 to load the media correctly.
- Make sure the paper is not folded, wrinkled, or damp.
- Make sure cut sheets are loaded in the “portrait” orientation.
- Make sure the printer’s environment falls within the required range of 59 to 77 °F (15 to 25 °C), with 40 to 60% relative humidity.
- Make sure the tension is set correctly on the roll paper spindle; see page 54. If the paper wrinkles, try using high tension.
- Make sure the paper is not too thick or too thin. See pages 47 and 166 to 168 for paper specifications.
- Make sure no foreign objects are inside the paper path.
- Make sure the printer isn’t located in a brightly lit area. The paper sensors may not operate correctly.
• Make sure the Media Type and Paper Source settings in the printer software are correct.

• Make sure the platen gap setting is correct for the paper or media you’re printing on. See page 74 for more information.

• If you’re not using Epson media, use a paper configuration to adjust for the paper’s thickness and drying time; see page 75.

Clearing Paper Jams

When roll paper gets jammed in the printer, printing stops and you see a PAPER JAM message on the LCD display. Follow these steps to clear a paper jam:

1. Open the roll paper cover and cut the paper at the insertion slot.

2. Make sure the Pause light is not flashing, then release the paper lever. If the paper lever is locked, press and hold the button for 3 seconds.
3. Rewind the paper.

4. Open the front cover if paper is jammed inside the printer.

5. Carefully pull down the jammed paper.

6. Close the front cover, if necessary. Press the Power button to turn the printer off and then back on.

7. Reload your paper.

**Caution:** To avoid damaging the printer, do not touch the cables around the print head. Be careful not to touch the roller, ink absorption pad, and ink tubes inside the printer.
Uninstalling and Reinstalling the Printer Driver

If you need to uninstall and then reinstall the printer driver software for any reason, follow the instructions in the appropriate section below.

Macintosh

1. Open the Applications folder, then the Utilities folder.
2. Double-click Printer Setup Utility, select your printer, and then click Delete.
3. Insert the printer software CD-ROM.
4. Open the window and double-click the Epson installer icon.
5. Select Uninstall from the pull-down menu, then follow the instructions to uninstall the printer driver.
6. If you want to reinstall your printer software, restart your Macintosh. Then follow the instructions on page 37 to install the software.

Windows

1. Open the Windows Control Panel.
2. Select Add or Remove Programs or Add/Remove Programs.
3. Click EPSON Printer Software in the program list, then select Uninstall/Change or Change/Remove.
4. Select your printer icon, then click OK.
5. Follow the on-screen instructions to uninstall the software. When you see the confirmation message, click Yes.
   If you see a prompt asking if you want to remove your personal settings information, click Yes.
6. If you want to reinstall your printer software, restart your computer. Then follow the instructions on page 41 to install the software.

Tip: Check the Epson Pro Imaging website at www.proimaging.epson.com for updated drivers and utilities that may become available.

</tbody>
</table>
**Printer Interfaces**
- USB (1.1 and 2.0 compatible)
- 10/100/1000 BaseT Ethernet port

**Safety Approvals**

- **Safety standards**: UL 60950-1, CSA No. 60950-1
- **EMC**: FCC part 15 subpart B, class A, CAN/CSA-CEI/IEC CISPR 22, class A

**Media**

**Roll Paper**

- **Maximum roll width**: 64 inches
- **Maximum roll length**: Up to 148 feet for 2-inch cored media
  Up to 662 feet for 3-inch cored media
- **Weight range**: 64 to 260 g/sm
- **Roll paper compatibility**: Handles both 2- and 3-inch cored media
- **Maximum roll paper diameter**: 4 inches (2-inch core) or
  6 inches (3-inch core)

**Cut Sheets**

- **Sizes**: A4 (8.3 × 11.7 inches)
  Letter (8.5 × 11 inches)
  8 × 10 inches
  ARCH A (9 × 12 inches)
  10 × 12 inches
  B4 (JB4) (10.1 × 14.2 inches)
  11 × 14 inches
  30 × 40 cm (11.8 × 15.7 inches)
  A3 (11.7 × 16.5 inches)
  US B (11 × 17 inches)
  12 × 12 inches

**Note**: Since the quality of any particular brand or type of paper may be changed by the manufacturer at any time, Epson cannot attest to the quality of any non-Epson brand or type of paper. Always test samples of paper stock before purchasing large quantities or printing large jobs.
