7 Choose your connection

You can connect your printer to your existing network (wireless or wired) or directly to your computer using a USB cable (not included). See below for details on each connection method.

Wireless Connection

You must install the software on every computer from which you want to print. For the first installation, we recommend using a USB cable (not included) to simplify wireless setup. After the printer is connected to the network, you will be prompted to remove the cable.

If you're using Mac OS® X 10.6 or don't have a USB cable, you will need to use the buttons on the printer to select wireless settings.

Make sure you know your network name (SSID) and network password:

- Network name _____
- Network password _____

If you don't have this information, contact the person who set up your network.

Direct USB Connection

Make sure you have a USB cable (not included). Do not connect the printer to your computer until you're instructed to do so.

Wired Ethernet® Connection

Make sure you have an Ethernet network cable (not included). You must install the software on every computer from which you want to print.

8 Install software

- 1 Make sure the printer is **NOT CONNECTED** to your computer.

Windows®: If you see a Found New Hardware screen, click **Cancel** and disconnect the USB cable. You can't install your software that way.

- 2 Insert your product CD.

Windows: If you see the AutoPlay window, click **Run Setup.exe**. If you see the User Account Control screen, click **Yes** or **Continue**.

- 3 **Macintosh®:** Double-click the  **Epson** icon.

- 4 Click **Install** and follow the on-screen instructions.
